

7.7 T3000 Test Leads

7.7.1 T3000-7400 RF Test Lead Kit

The T3000-7400 test lead provides an RF connection from the radio to test instruments, and can be used with the radio open. One end of the test lead is fitted with a BNC plug and the other end has a modified N-type plug. The N-type plug is held in place against the radio aerial switch by a bracket that screws into the antenna mounting stud.

7.7.2 T3000-7500 Open Radio Control Lead Kit

The T3000-7500 test lead enables connection to the T3000 calibration test unit when the radio is open. One end of the test lead is fitted with a modified accessory connector and the other has a 15 way socket.
