INSTALLATION

TK-780/880/980/981 Series (TK-*80 Series)

■ Installing the KCT-34 in the Transceiver

1. Remove the upper cover from the transceiver.
2. Lift the DC cord bushing (①) from the chassis.
3. Remove the pad as shown in the Figure 1 (②).
4. Insert the KCT-34 cable (③) into the chassis (④). The wire harness band (⑤) must be inside the chassis.
5. Replace the DC cord bushing (⑥).
6. Connect the KCT-34 to the TX-RX unit (A/2) as shown in Figure 2 (⑦).

Connector	Wire Color	Pin No.	Connector	Wire Color	Pin No.
A-1	Brown	4	B-1	NC	-
A-2	NC	-	B-2	White	11
A-3	NC	-	B-3	Green	7

INSTALLATION / REALIGNMENT

TK-760G/762G/860G/862G/768G/868G Series

(TK-*60G Series)

■ Installing the KCT-35 in the Transceiver

1. Remove the upper cover from the transceiver.
2. Lift the DC cord bushing (①) from the chassis.
3. Remove the pad as shown in the Figure 3 (②).
4. Insert the KCT-35 cable (③) into the chassis (④). The wire harness band (⑤) must be inside the chassis.
5. Replace the DC cord bushing (⑥).
6. Connect the KCT-35 to the TX-RX unit (A/2) as shown in Figure 4 (⑦).

Connector	Wire Color	Pin No.	Connector	Wire Color	Pin No.
A-1	Brown	4	B-1	Gray	10
A-2	Green	7	B-2	White	11
A-3	NC	-	B-3	Purple	9
A-4	Orange	5	C-1	NC	-
A-5	NC	-	C-2	Black	3
A-6	NC	-	C-3	Red	1
A-7	Yellow	6			
A-8	Blue	8

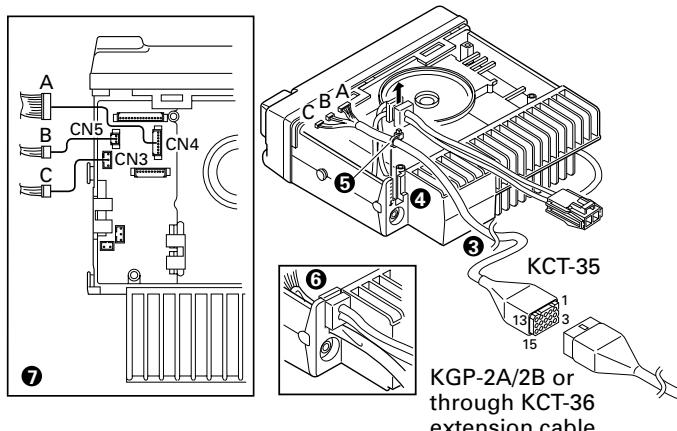

Fig. 4

REALIGNMENT

Transceiver Setting

When the KGP-2A/2B is connected to a transceiver, the transceiver functions must be set. The transceiver FPU is used to make this setting.

For a connection method, see Figure 1.

■ TK-*80 Series Setting Method

1. Setting with KPG-49D (K and M markets FPU)

- 1) Select "Optional Features" from "Edit" on the menu bar and change Com2 (Internal Port) from "[None]" to "[AUX Hook/PTT]".

2. Setting with KPG-60D (E markets FPU)

- 1) Select "Extended Function" from "Edit" on the menu bar and change Com2 from "[None]" to "[AUX Hook/PTT]".

■ TK-*60G Series Setting Method

Use the KPG-56D as the FPU.

- 1) Select "Key assignment" from "Edit" on the menu bar, and set "Foot Switch" to "[None]".
- 2) Select "Optional Features" from "Edit" on the menu bar and change "ACC Hook/DTC" from "[ACC Hook]" to "[DTC]".

Note :

Applicable only for S/No. 302XXXXX or later.

KGP-2A/2B Setting

After programming the transceiver, you need to configure the KGP-2A/2B. Using the FPU (KPG-73D), you can configure the KGP-2A/2B.

Using a cross-wired serial cable (KGP-2A/2B side : D-sub 9-pin female) as shown in Figure 2, plug one connector into the RS-232C (COM) port of your PC and the other end to the ACC1 connector on the rear panel of the KGP-2A/2B.

■ KGP-2A/2B Setting Method

- 1) Create a data file using the FPU (KPG-73D).
- 2) After configuring the KGP-2A/2B to the Programming Menu mode, upload the data file to the KGP-2A/2B.

※ For detailed instructions, refer to the Help file included in the FPU.

※ To set the KGP-2A/2B in the Programming Menu mode, refer to "Start the Programming Menu mode" on page 6.

KGP-2A/2B

REALIGNMENT

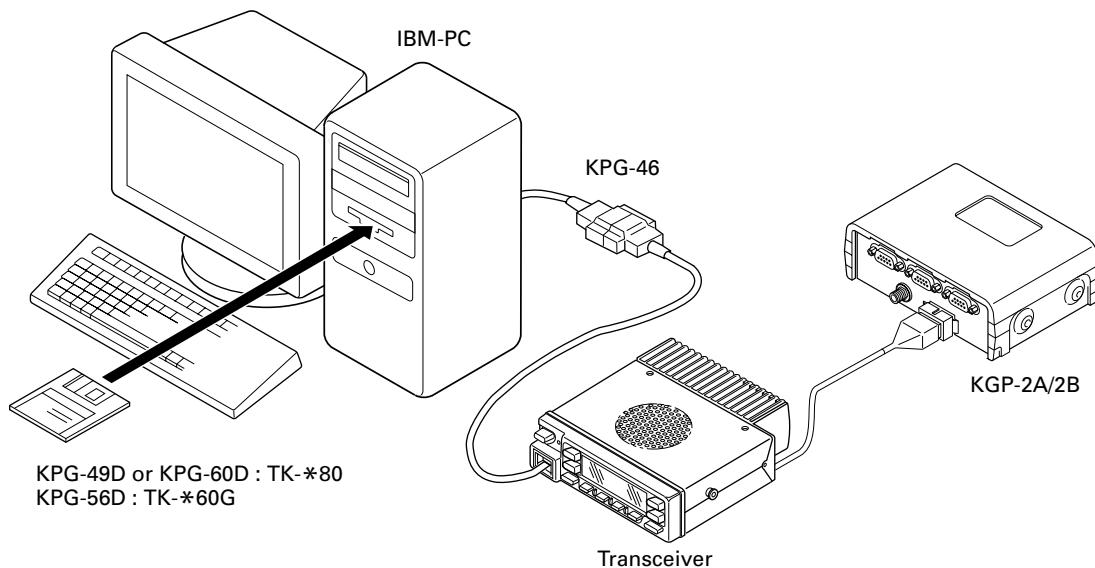

Fig. 1

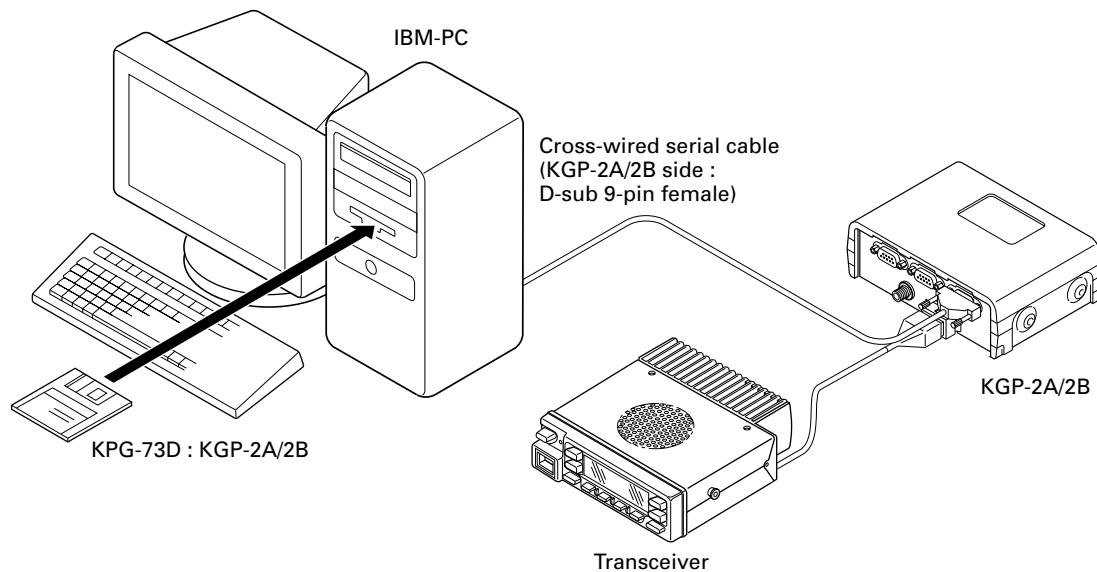

Fig. 2

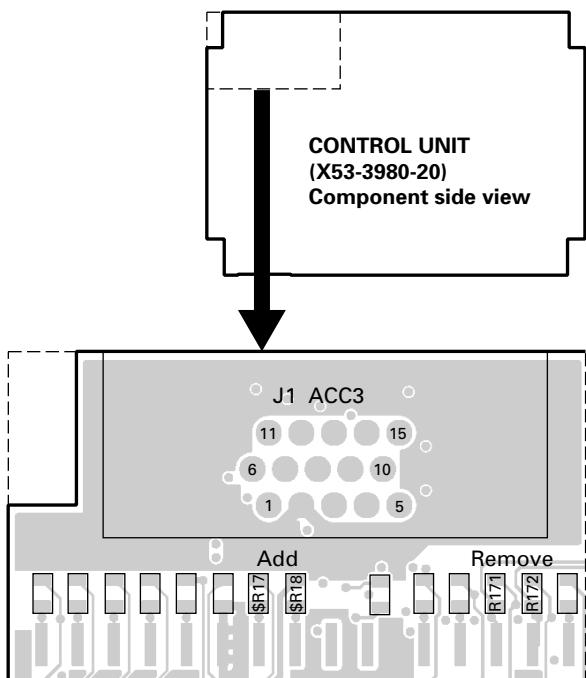

MODIFICATION

Connecting a Separate Microphone for Emergency Mode (KGP-2A only)

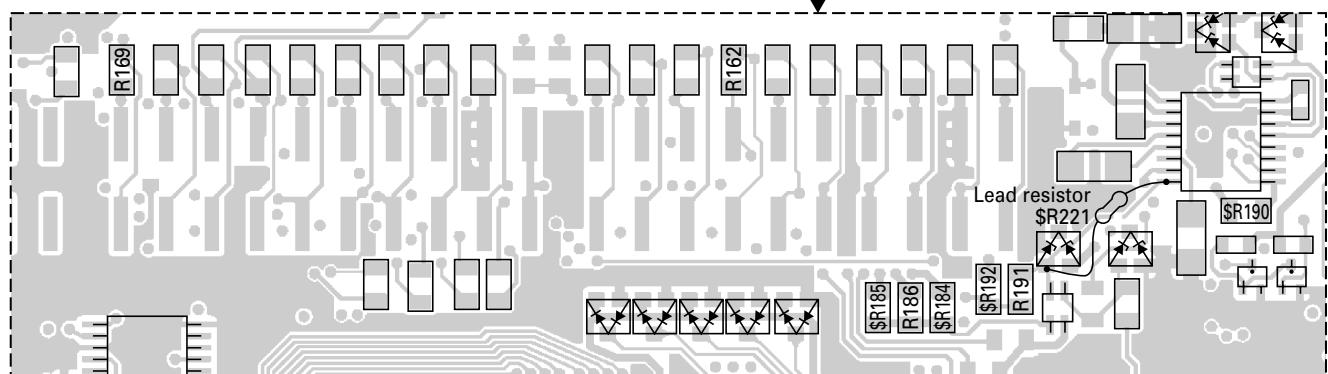

If you apply the modification as described below, you can connect a separate microphone to the KGP-2A in place of the transceiver's microphone for Emergency mode. The base station application software which can send out a corresponding command is required for the change of a microphone which operates in the time of emergency transmission.

■ Modification

1. Remove R171 (0Ω).
2. Remove R172 (0Ω).
3. Add 0Ω (R92-0670-05) to the \$R17 location.
4. Add 0Ω (R92-0670-05) to the \$R18 location.

J1 (ACC3) Pin 5 : Microphone input
J1 (ACC3) Pin 6 : Microphone ground (GND)

Since 5V DC goes through R55 (56kΩ) and then it is supplied to the microphone input, an electric condenser-type microphone can be connected to this terminal.

You can also adjust the microphone sensitivity by changing the R206 (560Ω) constant between 330Ω and approximately 1kΩ. The microphone pre-emphasis and IDC are carried out by the DSP IC (IC29).

Modification Setting for DGPS (KGP-2A only)

Input method of DGPS signal	\$R192 (0Ω)	R186 (0Ω)	\$R184 (0Ω)	\$R185 (0Ω)	R191 (0Ω)
5V input from ACC2	Yes	No	Yes	No	No
RS-232C level input from ACC2	Yes	No	Yes	No	Yes
5V input from ACC3	Yes	No	No	Yes	No
RS-232C level input from ACC3	Yes	No	No	Yes	Yes
Input method of DGPS signal	\$R190 (0Ω)	\$R221 (0Ω)	R162 (0Ω)	R169 (0Ω)	
5V input from ACC2	No	No	No	N/A	
RS-232C level input from ACC2	Yes	Yes	No	N/A	
5V input from ACC3	No	No	N/A	No	
RS-232C level input from ACC3	Yes	Yes	N/A	No	

KGP-2A/2B

DISASSEMBLY FOR REPAIR / ADJUSTMENT

Remove the Case from the Chassis

1. Remove 4 screws (❶).
2. Hold the KGP-2A/2B upside down as shown in Figure 2, then lift the chassis upward by pulling the tabs on its side (❷). Also, lift the chassis on the other side in same manner.
3. Grab the chassis from the top and lift it upward (❸), then slide and pull the chassis slightly (❹). Lift the chassis upward (❺) to remove it from the case.

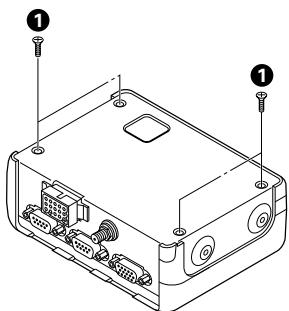

Fig. 1

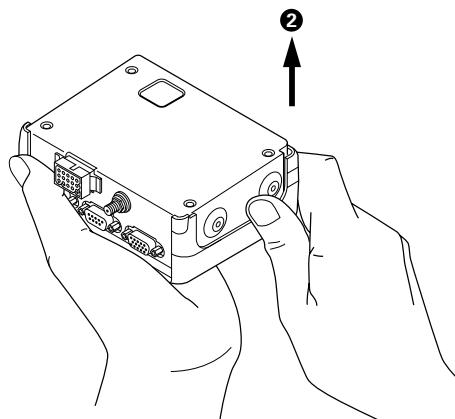

Fig. 2

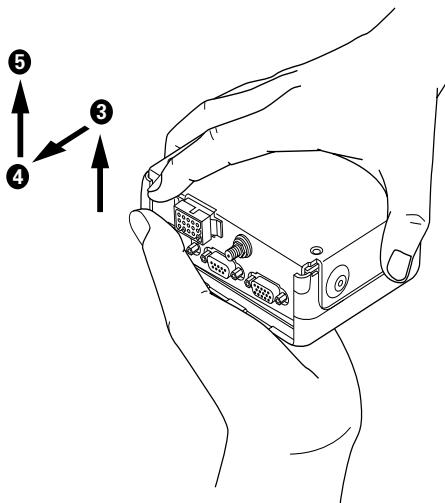

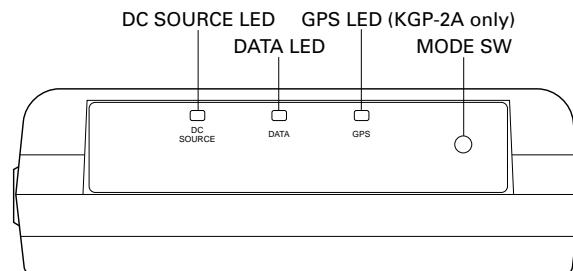

Fig. 3

ADJUSTMENT

Front Panel

Start the Programming Menu Mode

Press and hold the MODE SW key for more than 2 seconds. "DC SOURCE" LED blinks and then the KGP-2A/2B enters the programming menu mode.

Note : If the KGP-2A/2B does not receive any programming commands from a PC within 30 seconds after the "DC SOURCE" LED starts blinking. It returns normal operation (User mode). If you press MODE SW key while the "DC SOURCE" LED is blinking, the KGP-2A/2B returns to User mode.

Updating the Firmware

- 1) Connect the transceiver and KGP-2A/2B as shown in Figure 2 on page 4.
- 2) Double-click the "Fpro.exe" file (Ver. 3.01 or later) in the folder where the KPG-73D is installed.
- 3) After the program starts, click the "Open a file" icon [], then select the new firmware data file.
- 4) Configure the KPG-2A/2B to enter the Programming menu mode, then, click [Write] on the Fpro screen to start revising the firmware. (The Fpro program first erases the firmware file on the KGP-2A/2B, then writes the new firmware file.)
 - While erasing the firmware, the "DC SOURCE" LED blinks green and the "DATA" LED lights orange.
 - While writing the firmware, the "DC SOURCE" and "DATA" LEDs blink green.
 - When the firmware is successfully revised, only the "DC SOURCE" LED blinks green.
 - When an error occurs, the "DC SOURCE" LED blinks green and the "DATA" LED blinks red. In this case, switch the KGP-2A/2B OFF, then turn it ON again. The "DC SOURCE" LED blinks green and the "DATA" LED lights orange. Click [Write] on the Fpro screen to restart revising the firmware.
- 5) Click "OK" when the confirmation dialog box appears. Select [Exit] to exit the program.
- 6) Turn the KGP-2A/2B OFF and then back ON to return to User mode.

ADJUSTMENT

MSK Modulation Adjustment

Adjust deviation as follows: Wide: 3kHz and Narrow: 1.5kHz.

- 1) Connect a transceiver and a PC to the KGP-2A/2B (Figure 2 on page 4). After configuring the KGP-2A/2B to enter the Programming menu mode, select "Test Mode" from "Program" on the FPU (KPG-73D) menu.
- 2) Adjust the "Output Level" DIGIT value on the "MSK" screen.
- 3) When you click on "OK" on the PC screen, the adjustment value is written into the KGP-2A/2B memories.

MSK Detection Input Level Adjustment

Set the input voltage at pin 2 of the CODEC IC (IC22) of the KGP-2A/2B to 1000mVp-p.

- 1) Adjust the SSG level as shown below. Then connect the output to the transceiver.

Frequency : Same frequency that the transceiver is receiving.

Modulation Frequency : 1200Hz (or 1000Hz)

Frequency Deviation : 3kHz (Wide), 1.5kHz (Narrow)

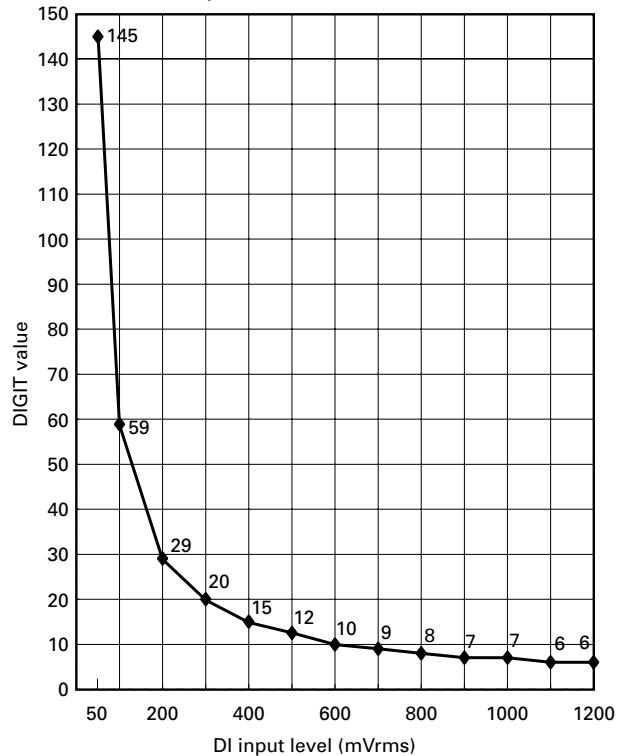

Output Level : -53dBm (60dB μ)

- 2) Measure the KGP-2A/2B DI voltage (DI: CN1 pin 3, transceiver detection output voltage) with a AF-VTVM.
- 3) Set the "Input Level" DIGIT value according to the following conversion table on the "MSK" screen in "Test Mode" so that the measured voltage (mVrms) is the CODEC IC input voltage (1000mVp-p).
- 4) When you click on "OK" on the PC screen, the adjustment value is written into the KGP-2A/2B memories.

DI input level (mVrms)	DIGIT value	CODEC IC (IC22) pin 2 input level (mVp-p)
50	145	
100	59	
200	29	
300	20	
400	15	
500	12	
600	10	
700	9	
800	8	
900	7	
1000	7	1000
1100	6	
1200	6	

Conversion table

DI input level vs DIGIT value

CIRCUIT DESCRIPTION

1. Power Supply Circuit

The KGP-2A/2B power supply circuit uses a dedicated regulator IC for each circuit application so that the circuits do not interfere with each other. (Figure 1)

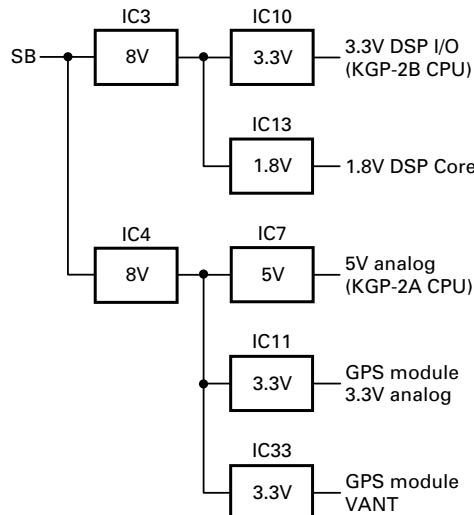

Fig. 1

2. LED Control Circuit

The LEDs of "DC SOURCE", "DATA" (TX/RX status), and "GPS" (KGP-2A only) are controlled by the CPU (IC17), using the shift register (IC12). (Figure 2)

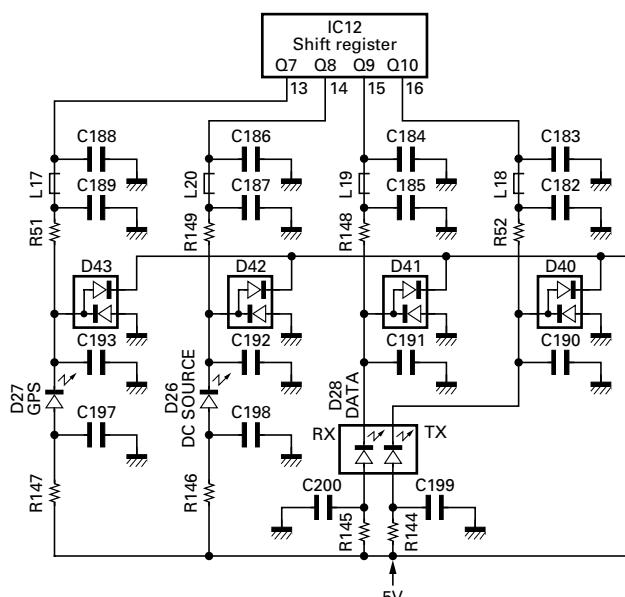

Fig. 2

3. Digital Control Circuit

■ Overview

The KGP-2A/2B control circuit consists of the CPU (IC17) and DSP IC (IC29).

The DSP functions as a MSK modem.

Figure 3 is a block diagram of a digital control circuit.

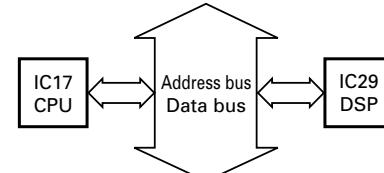

Fig. 3

■ Address control circuit

The CPU is running at "Single chip mode" that utilize the internal RAM and ROM. It exchanges data by using the external data bus to communicate with an external DSP IC. Although the CPU in the KGP-2A is running at 5V DC, the FLASH ROM (IC25) and DSP IC uses 3V DC. So, there are the 5V-3V level converter IC (IC19, IC20, IC21 and IC31) in the address bus and data bus to interface among these ICs. (Figure 4A)

Since the CPU in the KGP-2B is running at 3V DC, it does not require the voltage level conversion. So, the address bus and data bus of the CPU is connected to the FLASH ROM and DSP IC without using the 5V-3V level converter IC. (Figure 4B)

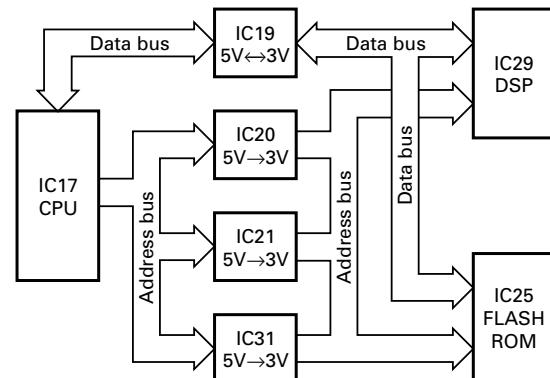

Fig. 4A

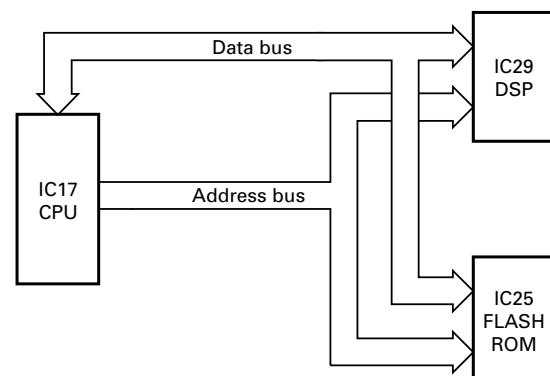

Fig. 4B

CIRCUIT DESCRIPTION

■ GPS module (KGP-2A only)

The location data is measured by the internal GPS module. When the KGP-2A is turned OFF, it enters the backup mode and the power is supplied by the internal rechargeable lithium battery. It takes approximately 45 seconds to calculate the location data when the KGP-2A is "cold" started (full initializing).

■ System reset

The reset IC (IC1) monitors the power supply voltage (SB : 13.6V). If the voltage drops, the IC outputs LOW-level on the OUT port. At the same time, PFINT port (CPU : IC17) becomes LOW-level and the program executes the backup routine. If the power supply voltage of the CPU (5V for the KGP-2A or 3 V for the KGP-2B) becomes lower than the specified value, the CPU stops working. When the power supply voltage of the CPU becomes normal (the above voltage), the reset IC (IC14) outputs the reset signal to the CPU RESET port. Then the CPU initializes the settings and starts working again.

■ Serial (COM) port

The KGP-2A/2B communicates to an external PC through the ACC1 connector on the rear panel. The KGP-2A/2B has an internal, bi-directional RS-232C/TTL voltage level converter (IC6) that converts the signal levels between the CPU and the ACC1 connector. (Figure 5)

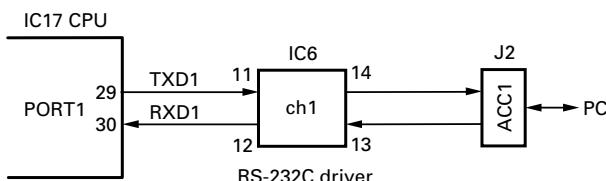

Fig. 5

4. Transmit/Receive Signal Flow

■ Receive Data Signal

The transceiver's detector output passes through CN1 pin 3 (DI) and amplifier (IC16), and the output level is adjusted by the D/A converter (IC18). The signal is amplified by the same amplifier (IC16) again, passes through the CODEC IC (IC22), and then it is converted to digital data.

The data is serially transferred from the CODEC IC to the DSP IC (IC29) and then further processed by the DSP IC. (Figure 6)

■ Transmit data signal

The digital data processed by the DSP IC, is serially transferred from the DSP IC to the CODEC IC. Then the signal is converted to analog signal. The signal is amplified by the amplifier (IC26) and then passes through the D/A converter (IC18) to adjust the voltage level. The signal is used as the transmitting data for the transceiver after passing through CN1 pin 5 (DO). (Figure 6)

LEVEL DIAGRAM

Receiver Section

All voltage values are measured by using either an AF-VTVM or oscilloscope when 707mVrms (2.0Vp-p) is applied to the CN1 terminal pin 3 (DI).

Transmitter Section

All voltage values are measured by using either an AF-VTVM or oscilloscope when 707mVrms (2.0Vp-p) is applied to the CN1 terminal pin 5 (DO).

TERMINAL FUNCTION

Connector No.	Pin No.	Pin Name	I/O	Function
CN1	1	SB	I	Main power supply input (13.6V)
	2	SBO	O	DC output (13.6V)
	3	DI	I	Modem input from radio DEO (Detector output)
	4	GND	-	Ground
	5	DO	O	Modem output to radio DI (Modulation input)
	6	PTT	O	PTT output
	7	DTC (DATA PTT)	O	Data TX control output (Data transmission output)
	8	SQ	I	Squelch input
	9	TXS	I	Radio TX detect input
	10	AM	O	Audio mute
	11	MM	O	Microphone mute
	12	ID	O	ID detect output (KGP protocol)
	13	DISP OFF	O	Controls radio LCD on/off
	14	TXD	O	Serial output (CMOS level)
	15	RXD	I	Serial input (CMOS level)
CN19 KGP-2A only	1~4	-	-	Ground
J2 (ACC1)	PC serial port (COM1)			
	1	NC	-	No connection
	2	RXD1	I	Serial 1 input (RS-232C level)
	3	TXD1	O	Serial 1 output (RS-232C level)
	4	DTR1	O	DTR1 output (RS-232C level)
	5	GND	-	Ground
	6	RTS1	O	RTS1 output (RS-232C level)
	7	NC	-	No connection
	8	NC	-	No connection
J3 (ACC2) KGP-2A only	Sensor I/O, Multi-purpose serial port (COM2)			
1	SEN7*	I/O	Sensor 7 input/output	
	NC	-	No connection	
2	SEN3*	I/O	Sensor 3 input/output	
	RXD2	I	Serial 2 input (RS-232C level)	
3	SEN4*	I/O	Sensor 4 input/output	
	TXD2	O	Serial 2 output (RS-232C level)	
4	SEN5*	I/O	Sensor 5 input/output	
	DTR2	O	DTR2 output (RS-232C level)	
5	GND	-	Ground	
6	SEN6*	I/O	Sensor 6 input/output	
	RTS2	O	RTS2 output (RS-232C level)	
7	SEN1*	I/O	Sensor 1 input/output	
	NC	-	No connection	
8	SEN0*	I/O	Sensor 0 input/output	
	NC	-	No connection

* : Default

SPECIFICATIONS**General**

Standard Input Voltage	13.6V DC negative ground (Supplying from connected Radio)
Current Drain	KGP-2A : Less than 300mA KGP-2B : Less than 240mA
Temperature Range	-30°C to +60°C (-22°F to +140°F)
Dimensions (W x H x D, Dimensions not including protrusions)	140 (5.5) x 46 (1.8) x 100 (4.0) mm (inch)
Weight	KGP-2A : 460g (1.01lbs) KGP-2B : 420g (0.93lbs)
Environment Standard	
Dust	MIL810C : 510.1/Procedure 1 MIL810D : 510.2/Procedure 1 MIL810E : 510.3/Procedure 1
Vibration	MIL810C : 514.2/Procedure 8,10 MIL810D : 514.3/Procedure 1 Cat, 8 MIL810E : 514.4/Procedure 1 Cat, 8
Shock	MIL810C : 516.2/Procedure 1,2,5 MIL810D : 516.3/Procedure 1,4 MIL810E : 516.4/Procedure 1,4

GPS Receiver Section (KGP-2A only)

Receiver Type	Parallel 9 channels
Receiver Frequency	1575.42MHz
Receiver Sensitivity (With supplied GPS antenna)	-130dBm or less
Supply Voltage to Antenna	DC 3.3V ± 0.2V

Modem Section

Modem Encode Level Range	100 to 1000mVrms
Modem Decode Level Range	100 to 1000mVrms
Modem Output Impedance	600Ω
Modem Input Impedance	600Ω
Modulation	MSK
Modulation Rate	1200bps or 2400bps

KENWOOD follows a policy of continuous advancement in development.

For this reason specifications may be changed without notice.
