Firmware Copyrights

The title to and ownership of copyrights for firmware embedded in Kenwood product memories are reserved for Kenwood Corporation. Any modifying, reverse engineering, copy, reproducing or disclosing on an Internet website of the firmware is strictly prohibited without prior written consent of Kenwood Corporation. Furthermore, any reselling, assigning or transferring of the firmware is also strictly prohibited without embedding the firmware in Kenwood product memories.

NXDN Transceivers:

The AMBE+2(TM) voice coding technology is embedded in the firmware under the license of Digital Voice Systems, Inc.

GENERAL

INTRODUCTION

SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions. These are issued as required.

ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts : components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

PERSONAL SAFETY

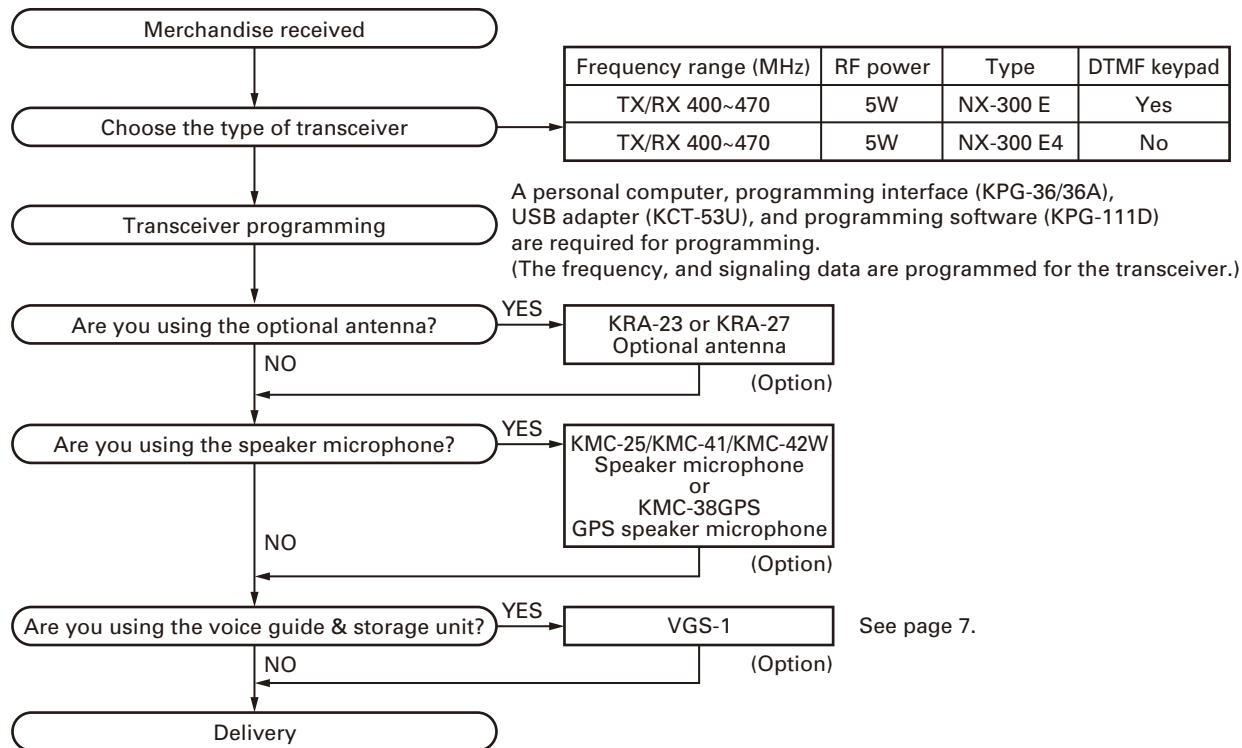

The following precautions are recommended for personal safety:

- DO NOT transmit until all RF connectors are verified secure and any open connectors are properly terminated.
- SHUT OFF and DO NOT operate this equipment near electrical blasting caps or in an explosive atmosphere.
- This equipment should be serviced by a qualified technician only.

SERVICE

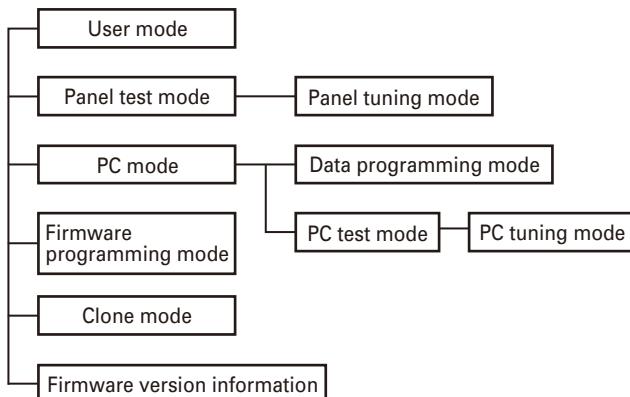

This transceiver is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained within.

SYSTEM SET-UP

REALIGNMENT

1. Modes

Mode	Function
User mode	For normal use.
Panel test mode	Used by the dealer to check the fundamental characteristics.
Panel tuning mode	Used by the dealer to tune the transceiver.
PC mode	Used for communication between the transceiver and PC.
Data programming mode	Used to read and write frequency data and other features to and from the transceiver.
PC test mode	Used to check the transceiver using the PC. This feature is included in the FPU. See pages 51 to 67.
Firmware programming mode	Used when changing the main program of the flash memory.
Clone mode	Used to transfer programming data from one transceiver to another.
Firmware version information	Used to confirm the internal firmware version.

REALIGNMENT

2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
Panel test mode	[] + Power ON
PC mode	Received commands from PC
Panel tuning mode	[Panel test mode] + []
Firmware programming mode	[] + Power ON
Clone mode	[<] + Power ON
Firmware version information	[Side1] + Power ON

3. Panel Test Mode

Setting method refer to ADJUSTMENT.

4. Panel Tuning Mode

Setting method refer to ADJUSTMENT.

5. PC Mode

5-1. Preface

The transceiver is programmed by using a personal computer, programming interface (KPG-36/36A), USB adapter (KCT-53U) and programming software (KPG-111D).

The programming software can be used with a PC or compatible. Figure 1 shows the setup of a PC for programming.

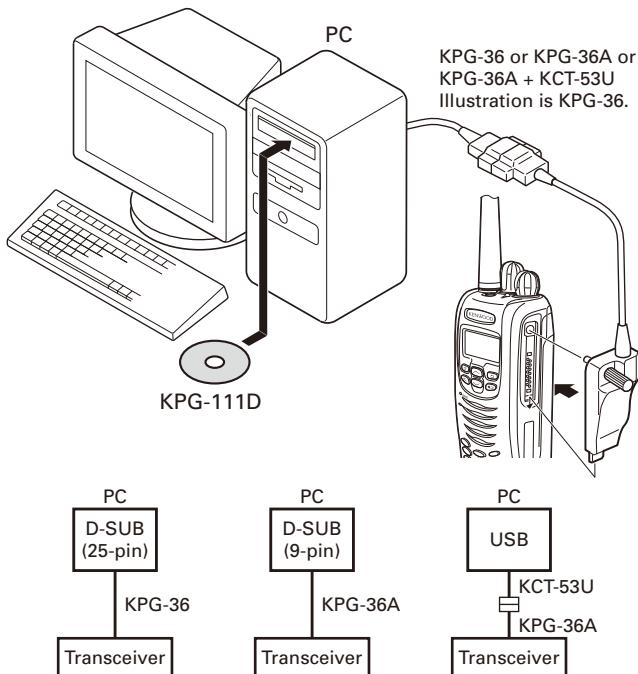

Fig. 1

5-2. Connection procedure

1. Connect the transceiver to the computer using the interface cable and USB adapter (When the interface cable is KPG-36A, the KCT-53U can be used.).

Note:

- You must install the KCT-53U driver in the computer to use the USB adapter (KCT-53U).
- When using the USB adapter (KCT-53U) for the first time, plug the KCT-53U into a USB port on the computer with the computer power ON.

2. When the POWER switch on, user mode can be entered immediately. When PC sends command the transceiver enter PC mode, and "PROGRAM" is displayed on the LCD.

When data transmitting from transceiver, the red LED is lights.

When data receiving to transceiver, the green LED is lights.

Note:

The data stored in the computer must match the "Model Name" when it is written into the flash memory.

5-3. KPG-36/KPG-36A description

(PC programming interface cable: Option)

The KPG-36/36A is required to interface the transceiver to the computer. It has a circuit in its D-sub connector (KPG-36: 25-pin, KPG-36A: 9-pin) case that converts the RS-232C logic level to the TTL level.

The KPG-36/36A connects the universal connector of the transceiver to the RS-232C serial port of the computer.

5-4. KCT-53U description (USB adapter: Option)

The KCT-53U is a cable which connects the KPG-36A to a USB port on a computer.

When using the KCT-53U, install the supplied CD-ROM (with driver software) in the computer. The KCT-53U driver runs under Windows 2000, XP or Vista (32-bit).

5-5. Programming software KPG-111D description

The KPG-111D is the programming software for the transceiver supplied on a CD-ROM. This software runs under MS-Windows 2000, XP or Vista (32-bit) on a PC or compatible machine.

The data can be input to or read from the transceiver and edited on the screen. The programmed or edited data can be printed out. It is also possible to tune the transceiver.

6. Firmware Programming Mode

6-1. Preface

Flash memory is mounted on the transceiver. This allows the transceiver to be upgraded when new features are released in the future. (For details on how to obtain the firmware, contact Customer Service.)

REALIGNMENT

6-2. Connection procedure

Connect the transceiver to the personal computer using the interface cable (KPG-36/36A) and USB adapter (KCT-53U: when the interface cable is KPG-36A, the KCT-53U can be used.). (Connection is the same as in the PC Mode.)

6-3. Programming

- Start up the firmware programming software (Fpro.exe (ver. 4.0 or later)). The Fpro.exe exists in the KPG-111D installed holder.
- Set the communications speed (normally, 115200 bps) and communications port in the configuration item.
- Set the firmware to be updated by File name item.
- Press and hold the [¶] key while turning the transceiver power ON. Then, the orange LED on the transceiver lights and "PROGRAM 115200" is displayed.
- Check the connection between the transceiver and the personal computer, and make sure that the transceiver is in the Program mode.
- Press "write" button in the window. When the transceiver starts to receive data, the [LOADING] display lights.
- If writing ends successfully, the checksum is calculated and a result is displayed.
- If you want to continue programming other transceivers, repeat steps 4 to 7.

Note:

This mode cannot be entered if the Firmware Programming mode is set to Disable in the Programming software.

6-4. Function

- If you press the [Side2] key while "PROGRAM 115200" is displayed, the display changes to "PROGRAM 19200" (The LED blinks green) to indicate that the write speed is low speed (19200 bps). If you press the [Side2] key again while "PROGRAM 19200" is displayed, the display changes to "PROGRAM 38400" (The LED lights red and orange alternatively). If you press the [Side2] key again while "PROGRAM 38400" is displayed, the display changes to "PROGRAM 57600" (The LED blinks orange). If you press the [Side2] key again while "PROGRAM 57600" is displayed, the display returns to "PROGRAM 115200" (The LED lights orange).
- If you press the [Side1] key while "PROGRAM 115200" is displayed, the checksum is calculated, and a result is displayed. If you press the [Side1] key again while the checksum is displayed, "PROGRAM 115200" is redisplayed.

Note:

Normally, write in the high-speed mode.

7. Clone Mode

Programming data can be transferred from one transceiver to another by connecting them via their external universal connectors. The operation is as follows (the transmit transceiver is the source and the receive transceiver is a target).

The following data cannot be cloned.

- Tuning data
- Embedded message with password
- Model name data
- ESN (Electronic Serial Number) data

Note:

The following data can be cloned.

- Fleet (own)/ID (own) for FleetSync
- Unit ID (own) for NXDN

Key guide on the Read authorization password input screen.

- CONFRM ([¶] key): The password confirmation
- DELETE ([↓] key): Delete the least digit from the current password number (Press and hold to delete all password numbers)
- SELECT ([¶] key): Determine the least digit of the password number

- Press and hold the [<>] key while turning the transceiver power ON. If the Read authorization password is set to the transceiver, the transceiver displays "CLONE LOCK". If the password is not set, the transceiver displays "CLONE MODE".
- When you enter the correct password, and "CLONE MODE" is displayed, the transceiver can be used as the cloning source. The following describes how to enter the password.
 - How to enter the password using the keypad (E models only):**
If one of keys 0 to 9 is pressed while the "CLONE LOCK" is displayed, the pressed number is displayed on the LCD.
Each press of the key shifts the display in order to the left.
When you enter the password and press the [¶] or [*] key, "CLONE MODE" is displayed if the entered password is correct. If the password is incorrect, "CLONE LOCK" is redisplayed.
 - How to enter the password using the [<>] and [<<] keys (E, E4 models):**
If the [<>] / [<<] key is pressed while "CLONE LOCK" is displayed, the Read authorization password input screen is displayed.
If the [<>] key or [<<] key is pressed while the Read authorization password input screen is displayed, the number (0 to 9) blinks on the LCD. When you press the [¶] key, the currently selected number is determined.

REALIGNMENT

If you press the [ⓐ] key after entering the password in this procedure, "CLONE MODE" is displayed if the entered password is correct. If the password is incorrect, "CLONE LOCK" is redisplayed.

4. Power ON the target transceiver.
5. Connect the cloning cable (part No. E30-3325-05) to the universal connectors on the source and target.
6. Press the [ⓐ] key on the source while the source displays "CLONE MODE". The data of the source is sent to the target. While the target is receiving the data, "PROGRAM" is displayed. When cloning of data is completed, the source displays "END", and the target automatically operates in the User mode. The target can then be operated by the same program as the source.
7. The other target can be continuously cloned. When the [ⓐ] key on the source is pressed while the source displays "END", the source displays "CLONE MODE". Carry out the operation in step 4 to 6.

Note:

- Cannot be cloned if the password (overwrite password) is programmed to the target.
- "Model Name" must be same to clone the transceiver.

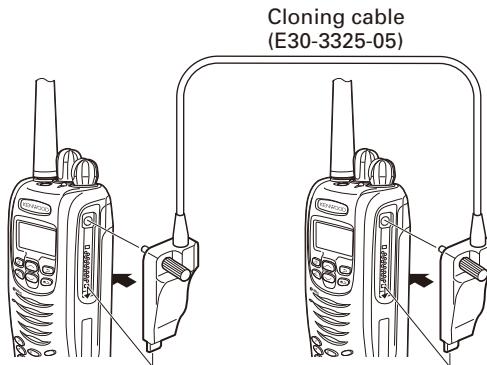

Fig. 2

8. Firmware Version Information

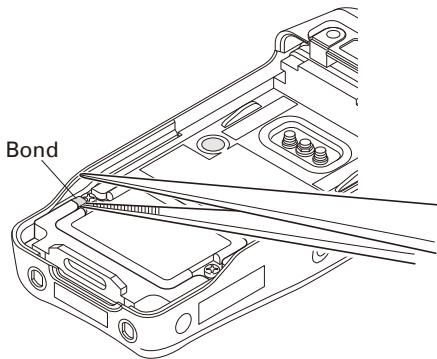

Press and hold the [Side1] key while turning the transceiver power ON and then keep pressing and holding the [Side1] key, the firmware version information appears on the LCD.

INSTALLATION

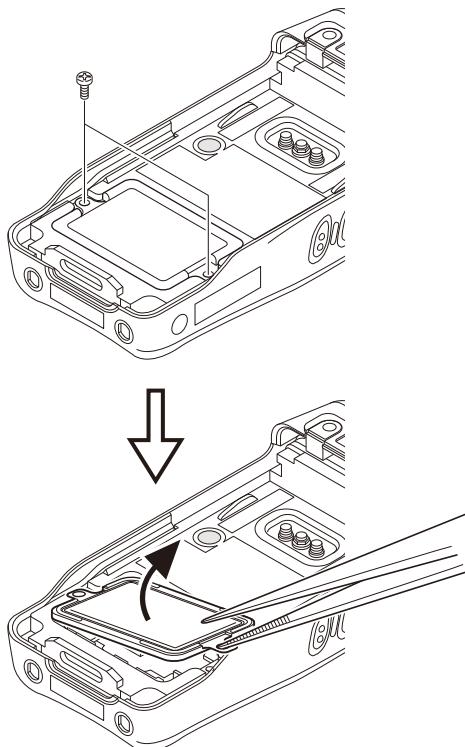

Voice Guide & Storage Unit (VGS-1: Option)

■ Installing the VGS-1 (Voice Guide & Storage Unit) in the transceiver

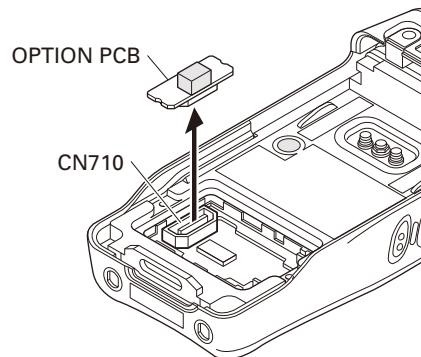

1. Remove the bond from between the chassis and the screw for the option board cover using a pair of tweezers.

2. Remove the two screws from the cover.
3. Remove the cover by inserting the tip of a pair of tweezers into the screw hole of the cover and prying it open.

4. Remove the OPTION PCB from the connector (CN710) of the Control PCB.

5. Attach the flat spring (G02-1846-03) to the VGS-1 as shown in the figure.

Note:

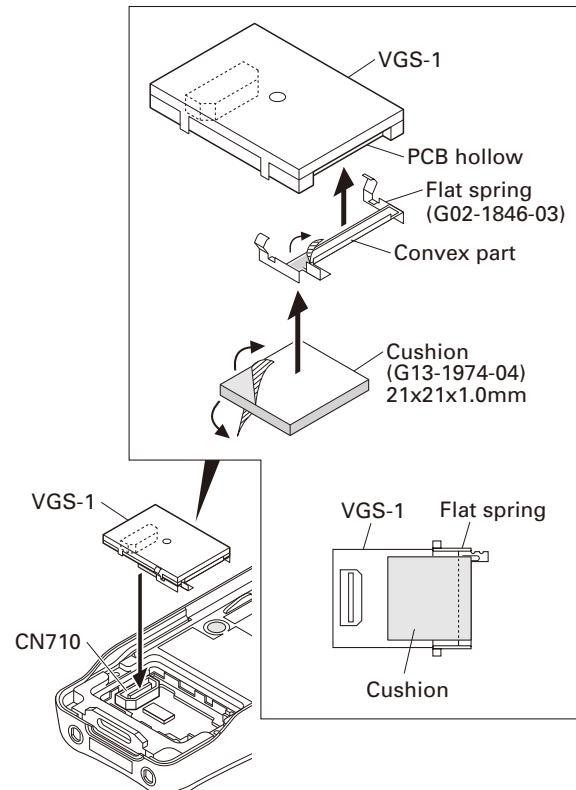

Attach the flat spring so that its convex fits the PCB hollow of the VGS-1.

6. Attach the cushion (G13-1974-04) to the VGS-1 as shown in the figure.

Note:

Be sure not to cover the VGS-1 connector with the cushion.

7. Insert the VGS-1 connector into the connector (CN710) of the Control PCB.

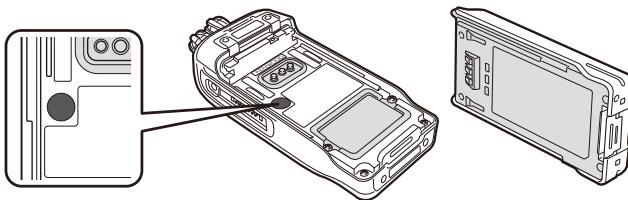

8. Reinstall the cover using the two screws removed in step 2.
9. Perform the water resistance confirmation and then apply the bond to the two left side screws, tightened in the rear of the transceiver. (Refer to pages 14 to 17.)

DISASSEMBLY FOR REPAIR

1. Precautions for Waterproof

- Do not remove the black sheet from the reverse side of the transceiver (refer to the illustration below). Removal of this sheet decreases the waterproof efficiency of the transceiver and may cause malfunctions if water seeps into the transceiver.
- The orange packing material on the reverse side of the transceiver is important with respect to the waterproof efficiency of the transceiver. Do not place stickers or other materials on or around the packing material shown in the figure, or on the reverse side of the battery pack. Doing so will impair the waterproof efficiency of the transceiver and may cause it to break down. Additionally, in order to prevent damage to the packing material, do not allow it to come in contact with foreign materials.

Perform the following work when you restore the waterproof performance of the transceiver at the IP67 level after the transceiver is repaired.

Attach the two pieces of double-sided adhesive tape (J99-0727-04, J99-0728-04) between the top packing and the chassis.	Refer to page 9.
Apply the silicon grease (W05-1492-00) onto the speaker part of the key top and around the chassis.	Refer to page 11.
Apply the silicon grease (W05-1492-00) around the hole of the negative (-) terminal in the rear of the chassis.	Refer to page 11.
Perform "Leakage Location Identification" and identify the location where air is leaking.	Refer to page 15.
Repair the location where air is leaking. (step 8 of "Leakage Location Identification")	Refer to page 16.
Apply bond to the top of the left side screw for the chassis and between the chassis and the left side screw for the option board cover.	Refer to page 16.

■ Water resistance maintenance of the transceiver

The transceiver satisfies protection levels (IP standard) IP67 specified by international standard IEC 60529. IP indicates a level of dust resistance and water resistance. The first characteristic numeral indicates "dust resistance", and the second characteristic numeral indicates "water resistance".

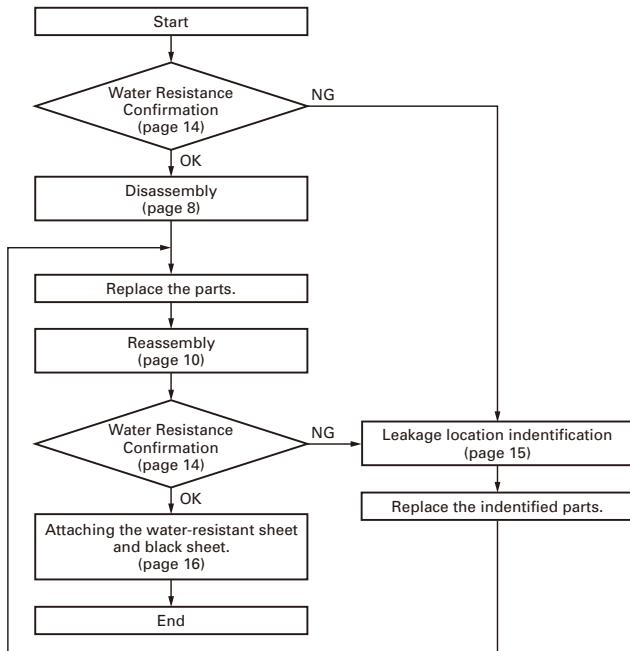

The overview of the IP67 requirements are provided below:

- IP6* (Dust resistant type): Reduce pressure in the set to a maximum of 2kPa to prevent entry of dust of 25 microns.
- IP*7 (Water immersion endurance): There is no ill effect on performance or function when the unit is immersed in water at a depth of 0.15 to 1m (0.49 to 3.28 feet) for 30 minutes. (In case of the test unit with a height less than 850mm, the bottom part of test unit can be placed 1000mm below the surface of the water.)

Disassemble the transceiver with the facility or in the environment in which water resistance can be fully confirmed.

Those who perform the procedure described here must be experienced qualified engineers who understand the contents of this service manual (B51-8859-00).

■ Repair procedure flow chart

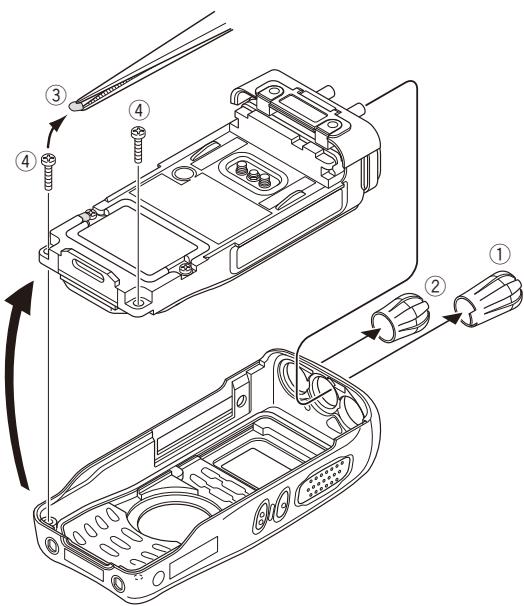

2. Precautions for Disassembly

Perform "Water Resistance Confirmation" on page 14 before disassembling the transceiver. If it fails, perform "Leakage Location Identification" on page 15.

■ Disassembly procedure

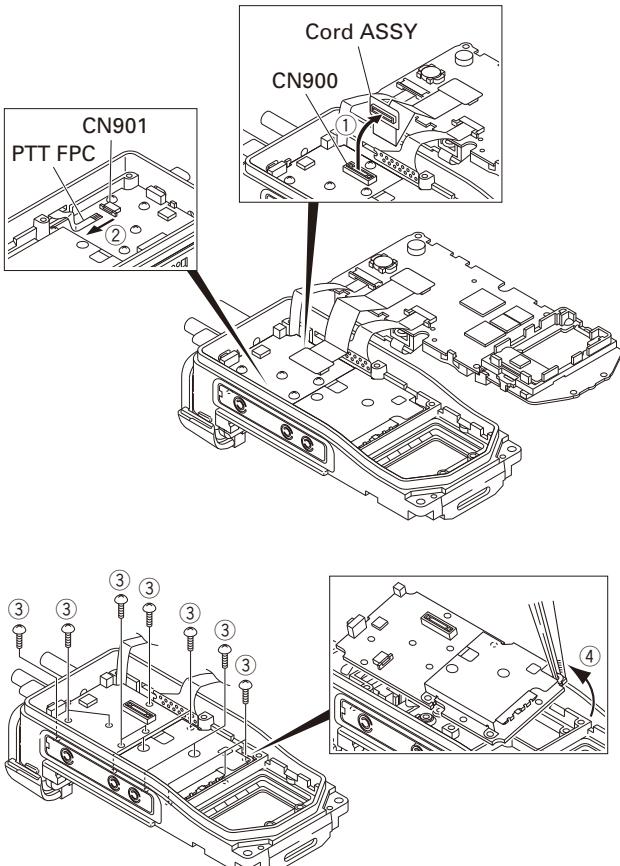

- Remove the channel knob ① and volume knob ②.
- Remove the bond ③ from the screw using a pair of tweezers.
- Remove the two screws ④.
- Lift and remove the chassis from the case.

DISASSEMBLY FOR REPAIR

■ Removing the TX-RX unit from the chassis

1. Remove the cord ASSY from the connector of the TX-RX unit (CN900) ①.
2. Remove the PTT FPC from the connector of the TX-RX unit (CN901) ②.
3. Remove the 14 screws ③.
4. Anchor the screw hole of the TX-RX unit using the tip of a pair of tweezers as shown in the figure. Then, lift the TX-RX unit to remove it from the chassis ④.

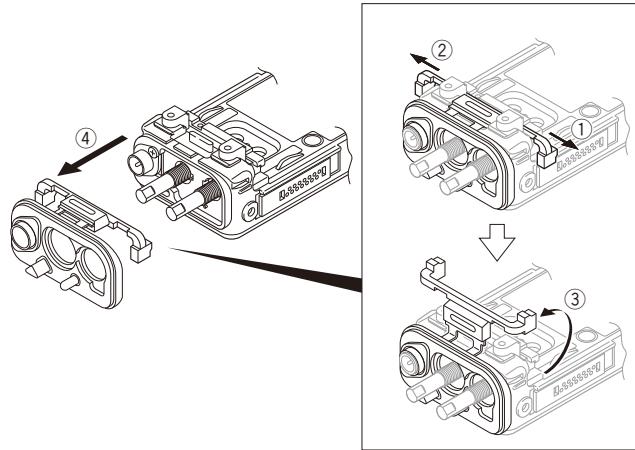

■ Removing the TOP packing (G53-1762-02)

1. Pull the TOP packing to the left to remove the packing that is fit into the left groove of the chassis ①.
2. Pull the TOP packing to the right to remove the packing that is fit into the right groove of the chassis ②.
3. Turn back the TOP packing as shown in the figure ③.
4. Remove the TOP packing ④.

Note:

Take care not to damage the TOP packing when peeling off, as it is attached to the chassis with two pieces of double-sided adhesive tape (J99-0727-04, J99-0728-04).

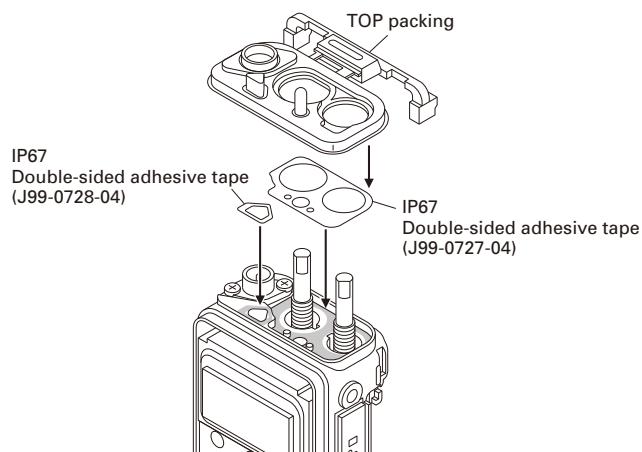

Note:

The two pieces of double-sided adhesive tape attached to the TOP packing cannot be reused.

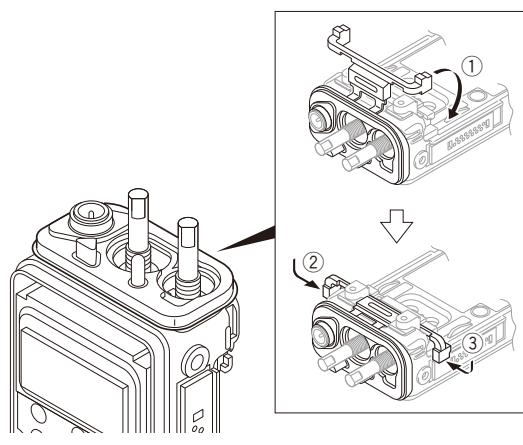

Perform the following procedures when you reassemble the TOP packing.

- 1) Attach the TOP packing after attaching new double-sided adhesive tape to the chassis as shown in the figure.

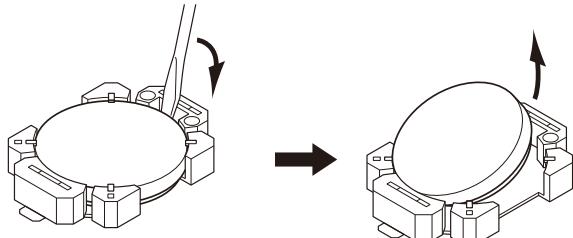

DISASSEMBLY FOR REPAIR

- 2) Move the TOP packing as shown in the figure, and attach it to the chassis ①.
- 3) Fit the TOP packing into the right groove of the chassis ②.
- 4) Fit the TOP packing into the left groove of the chassis ③.

**■ Removing the lithium cell (W09-0971-05)**

Insert a non-conductive screwdriver to groove of one side of the socket (CN401) and pry the lithium cell up from the socket.

**■ Installing the lithium cell (W09-0971-05)**

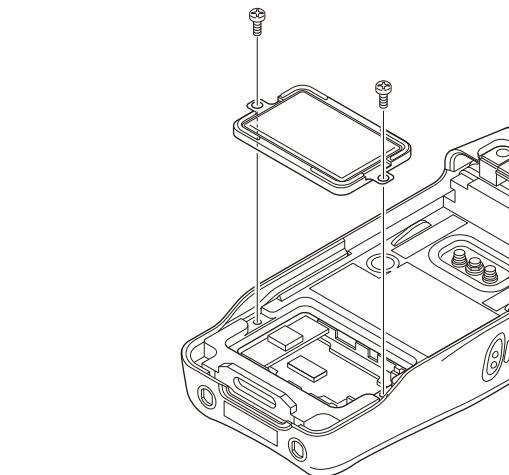

Insert a lithium cell into one side of the socket (CN401). Push the lithium cell to insert the lithium cell into the socket.

**3. Precautions for Reassembly****■ Installing the option board cover onto the chassis**

1. Install the option board cover onto the chassis using the two screws.

Note:

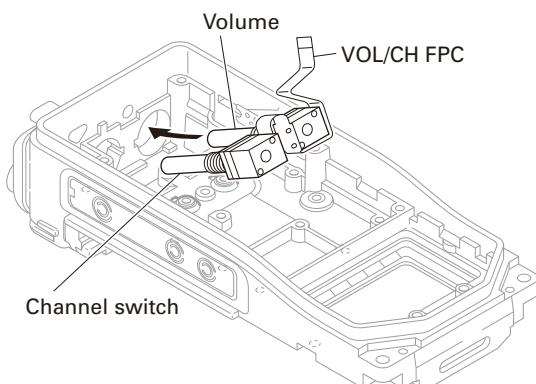

Confirm that there is no foreign matters on the waterproof rib of the option board cover. (Wipe it clean when foreign matters adhere to it.)

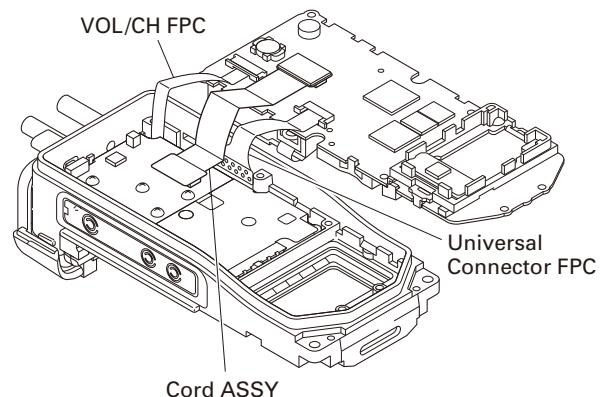

2. Perform the water resistance confirmation and then apply the bond to the two left side screws, tightened in the rear of the transceiver. (Refer to pages 14 to 17.)

■ Inserting the Volume and Channel switch into the chassis

Insert the volume and channel switch into the chassis with the VOL/CH FPC formed as shown in the figure.

**■ Forming the VOL/CH FPC, Cord ASSY and Universal connector FPC**

Form the VOL/CH FPC, Cord ASSY and Universal connector FPC as shown in the figure.

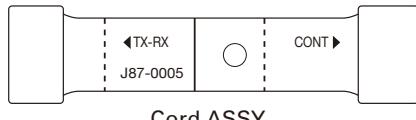

DISASSEMBLY FOR REPAIR

Note:

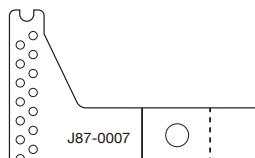

Fold indications are printed on the Cord ASSY and Universal Connector FPC.

"—" line shows creased line on the top.

"---" line shows creased line on the bottom.

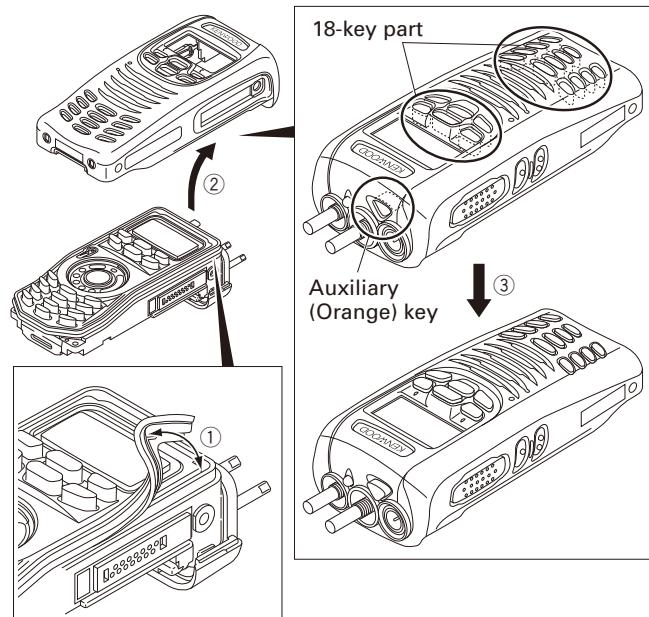

Cord ASSY

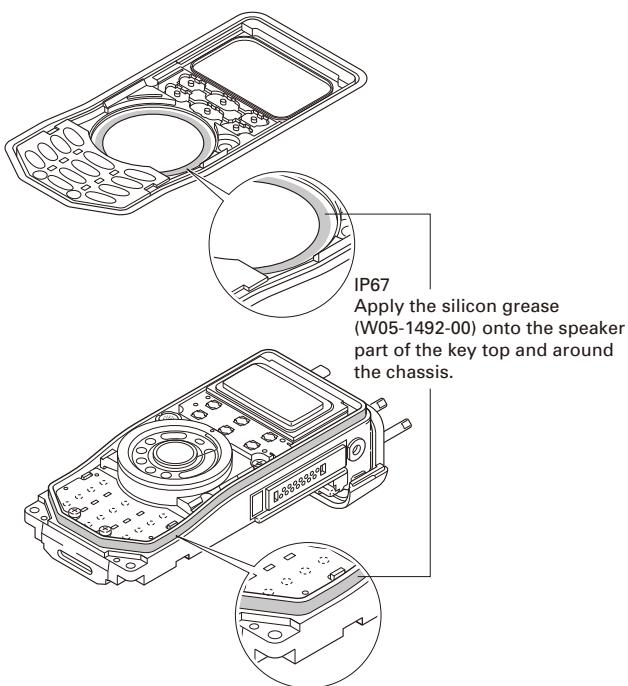

Universal Connector FPC

Prying it with a pointed metal tool such as forceps, may damage the key top or packing.

■ Mounting the chassis onto the case

1. Apply the silicon grease (W05-1492-00) onto the speaker part of the key top and around the chassis.

2. Place the key top on the chassis. Then, fit the chassis tightly into the groove of the key top ①.

Note:

Confirm that the entire groove of the key top fits to the chassis tightly.

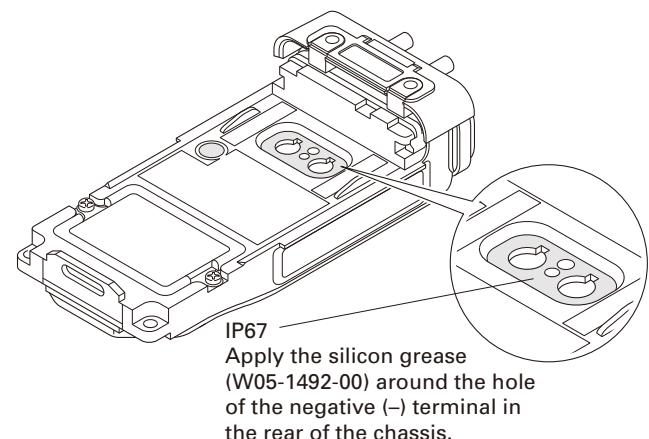

3. Mount the chassis onto the case ②.

Note:

After mounting the chassis onto the case, if the 18-key part on the key top or the Auxiliary (Orange) key part of the VOL/CH packing gets stuck inside the case as shown in the figure, return it to the normal position using a soft tipped item (e.g., finger) ③.

■ Correspondence when replacing the Terminal block (E72-0425-03) or Packing (G53-1763-03)

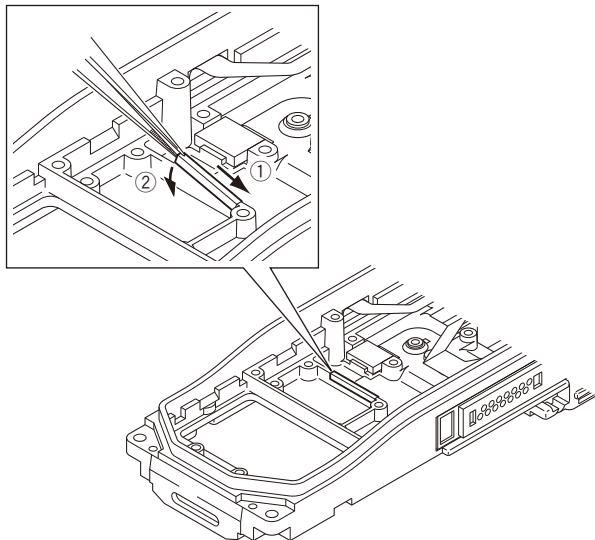

Apply the silicon grease (W05-1492-00) around the hole of the negative (-) terminal in the rear of the chassis when replacing the terminal block (E72-0425-03) or packing (G53-1763-03).

DISASSEMBLY FOR REPAIR

■ Relay hardware (E29-1221-14) installation procedure

1. Fit one side of the relay hardware to a right corner of the chassis using a pair of tweezers ①.
2. Fit the other side of the relay hardware to the rib of the chassis ②.

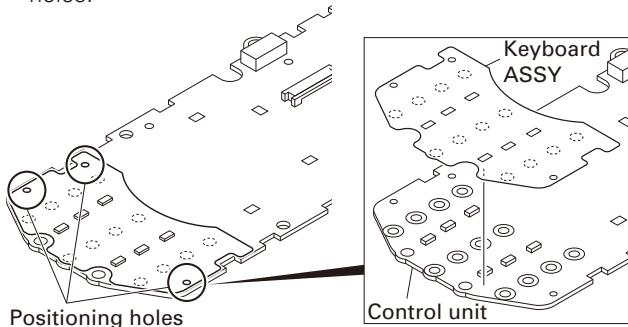

**■ Affixing the keyboard ASSY (S79-0472-05)**

Affix the keyboard ASSY to the Control unit as shown in the figure.

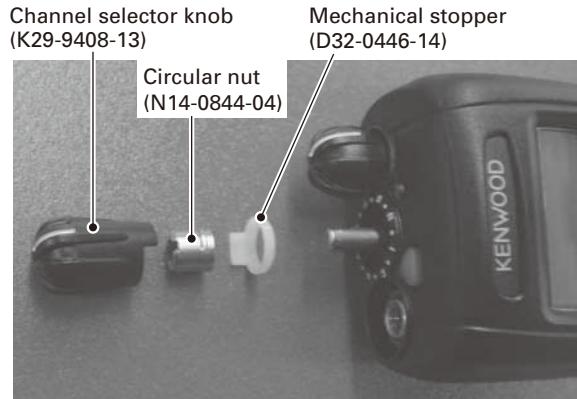

After affixing the keyboard ASSY to the Control unit, confirm that the three positioning holes of the keyboard ASSY and the Control unit are not misaligned.

Note:

If the holder (Option board) is removed from the Control unit, it becomes easy to confirm the three positioning holes.

**■ Changing the channel selector from 16-channel operation to free**

1. Remove the channel selector knob.
2. Remove the circular nut.
3. Remove the mechanical stopper.
4. Reassemble the circular nut and channel selector knob that were removed in steps 1 and 2, in their original positions.

DISASSEMBLY FOR REPAIR

■ Assembly information (Sheet/Cushion)

When "Main Parts" is changed (ordered), "Assembled Sheet/Cushion" should also be changed (ordered) together.

The Sticker and Sheet etc are non-reusable parts. It requires the new one to get the radio's performance after repairs.

For example, when "Plastic Cabinet (A02-4002-23 (6-key)/A02-4003-23 (18-key))" is changed, "Sticker (B42-7296-04)", "Badge (B43-1606-04)" and "Fibrous Sheet (G10-1373-04)" should be ordered and changed together because Sticker (B42-7296-04), Badge (B43-1606-04) and Fibrous Sheet (G10-1373-04) are non-reusable.

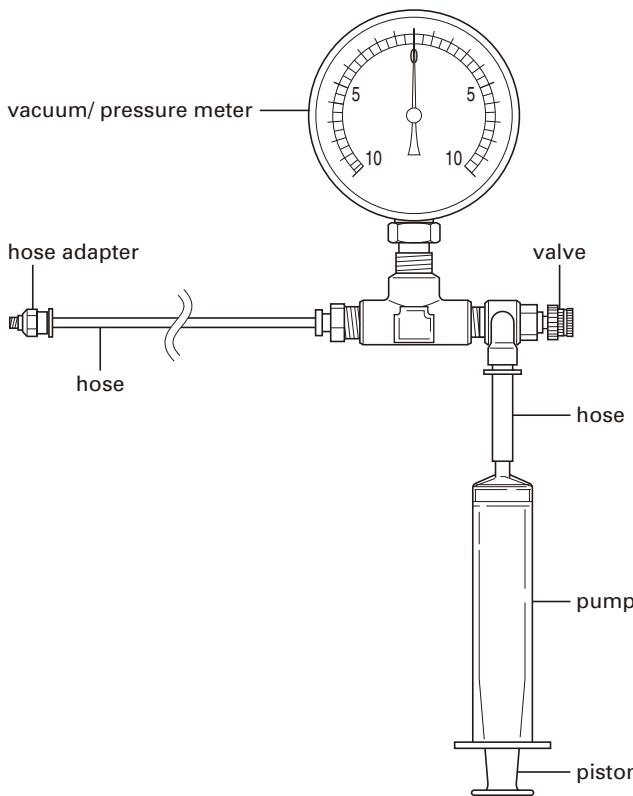

Main Parts		Assembled Sheet/ Cushion		
Part Name	Part Number	Part Name	Part Number	Remark
Plastic Cabinet (6-key)	A02-4002-23	Sticker	B42-7296-04	"NXDN" is printed.
		Badge	B43-1606-04	"KENWOOD" is printed.
Plastic Cabinet (18-key)	A02-4003-23	Fibrous Sheet (SP)	G10-1373-04	
LCD ASSY	B38-0923-05	Adhesive Sheet (LCD)	J99-0714-04	Used for fixing the LCD ASSY on the Illumination Guide (LCD). Also used for fixing the Illumination Guide (LCD) on the Control Unit.
Cord ASSY (50-pin FPC)	X42-3340-10	Cushion (50-pin FPC)	G13-2258-04	
Speaker	T07-0755-15	Rubber Cushion (SP)	G11-4272-14	
		Sheet (SP)	G11-4458-14	Used for stabilizing the waterproof performance. "•" (a hole) on the Sheet (SP) shows the upper side (6-key FPC side).
Switch Unit (6-key FPC)	X41-3720-10	Adhesive Sheet (6-key FPC)	J99-0390-04	Used for fixing the Switch Unit (6-key FPC) from the back side of the Holder (FG-SP) before soldering.
		Adhesive Sheet (6-key FPC)	J99-0712-14	Used for fixing the Switch Unit (6-key FPC) on the Holder (FG-SP).
Switch Unit (PTT FPC)	X41-3710-10	Sheet (PTT)	G11-4428-04	Used for fixing the Push Knob (PTT) on the Switch Unit (PTT FPC) and stabilizing the waterproof performance.
		Adhesive Sheet (PTT FPC)	J99-0711-04	Used for fixing the Switch Unit (PTT FPC) on the Chassis.
Chassis	A10-4127-01	Relay Hardware (VCO-Chassis)	E29-1221-14	Used for stabilizing the shield performance of the VCO.
		Sheet (Air)	G11-4331-04	This sheet is put on the leak check hole. This sheet lets air through, but does not let water through.
		Rubber Sheet (FET)	G11-4429-04	Used for stabilizing the radiation performance of the FET.
		Sheet (Air)	G11-4440-04	This sheet is a protect cover of the sheet (G11-4331-04).
		Cushion (ANT)	G13-2220-04	Used for fixing the Terminal ASSY.
Terminal Block	E72-0425-03	Adhesive Sheet (Terminal Block)	J99-0725-04	Used for fixing the Terminal Block and the Packing (Terminal Block).

DISASSEMBLY FOR REPAIR

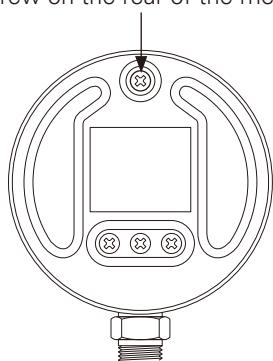

4. Water-resistant Inspection Method

Preparation

• Water-resistant Inspection Jig (W05-1499-00)

**Note:**

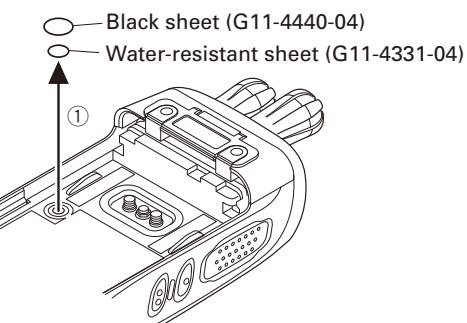

0 point adjustment of the meter needle can be done by turning the screw on the rear of the meter.

**■ Water Resistance Confirmation**

- 1) Install the universal connector cap over the universal connector.
- 2) Remove the water-resistant sheet (G11-4331-04) and black sheet (G11-4440-04) attached to the right side of the rear of the chassis using a pair of tweezers ①. This water-resistant sheet allows air to pass, but not water.

Note:

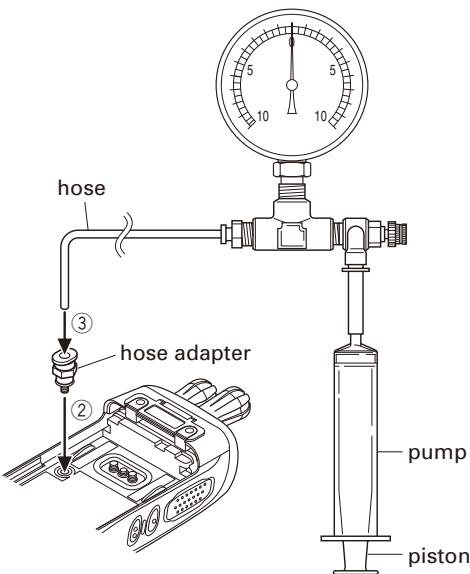

Take sufficient care to prevent damage to the surface of the chassis when removing the water-resistant sheet.

- 3) There is a screw hole under the water-resistant sheet. Insert the hose adapter into this screw hole while turning it ②.
- 4) Insert the water-resistant inspection jig hose into the hose adapter ③.

Note:

The piston of the water-resistant inspection jig pump must be pushed in to the end.

- 5) Turn and open the valve on the side of the pump of the water-resistant inspection jig, then pull the pump piston to reduce the pressure in the transceiver. Pull the piston until the meter needle of the water-resistant inspection jig indicates 10kPa (left side of meter). If the meter needle does not reach 10kPa when the piston is pulled to the end, perform the following steps.
 - a) Close the valve on the side of the pump.
 - b) Remove the pump from the hose.
 - c) Push the piston of the removed pump to the end.
 - d) Insert the pump into the hose.
 - e) Open the valve and pull the pump piston.

Repeat steps a) to e) until the meter needle indicates 10kPa (left side of meter). Disassemble and reassemble the transceiver when you do not reach 10kPa even if the step from a) to e) is repeated three times.

DISASSEMBLY FOR REPAIR

Note:

Do not push the piston with the pump inserted in the hose because the meter needle of the water-resistant inspection jig will break with excessive pressure.

- 6) When the meter needle reaches 10kPa (left side of meter), close the valve on the side of the pump and observe the movement of the meter needle.

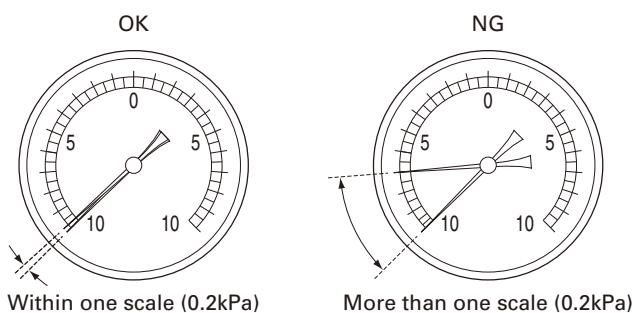

If the change of the meter needle is within one scale (0.2kPa) in 30 seconds, the transceiver will retain normal water resistance.

It is not necessary to perform the "Leakage Location Identification" test on page 15 under these conditions.

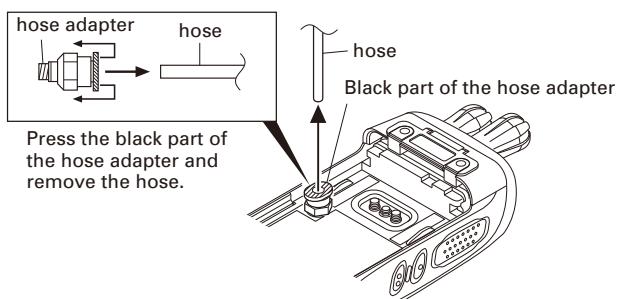

If the change of the meter needle is more than one scale (0.2kPa), water resistance is not adequate. Perform the "Leakage Location Identification" procedure on page 15.

Note:

If the valve is not closed, the pump piston is drawn by the negative pressure of the transceiver and the meter needle will move unexpectedly. Be sure to close the valve, before beginning the observation.

- 7) If water resistance retention is confirmed, press the black part of the hose adapter and remove the hose. Then turn the hose adapter and remove it from the chassis.

- 8) Perform the "Attaching the water-resistant sheet and black sheet" on page 16.

■ Leakage Location Identification

If step 6 of "Water Resistance Confirmation" on page 15 fails, perform this procedure.

- 1) Prepare for a container that can contain the transceiver sufficiently and put water to a height of approximately 20

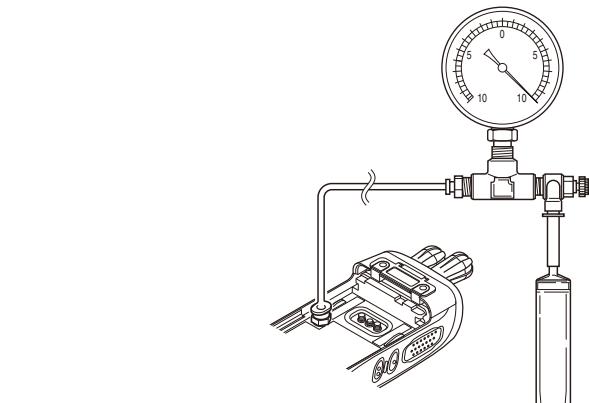

cm (7.87 inch) from the bottom of the container. The water temperature must be between 10°C (50°F) and 30°C (86°F).

- 2) Open the valve on the side of the pump, push the pump piston and increase the inside pressure of the transceiver to approximately 10kPa (right side of meter). If the meter needle does not reach 10kPa when the piston is pushed in to the end, perform the following steps.
- a) Close the valve on the side of the pump.
 - b) Remove the pump from the hose.
 - c) Pull the piston of the removed pump to the end.
 - d) Insert the pump into the hose.
 - e) Open the valve and push the pump piston.

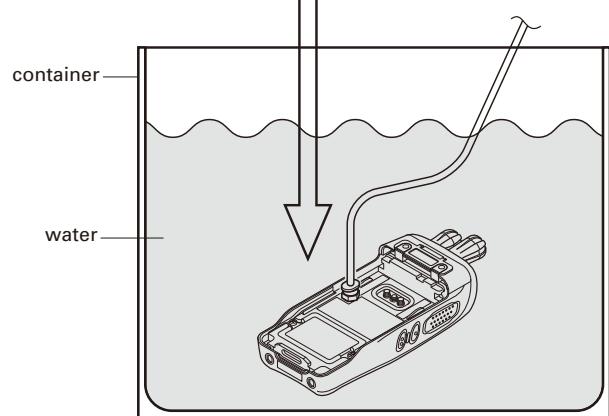

Repeat steps a) to e) until the meter needle indicates approximately 10kPa (right side of meter).

Disassemble and reassembly the transceiver when you do not reach approximately 10kPa even if the step from a) to e) is repeated three times.

- 3) Wait for one minute after the meter needle reaches approximately 10kPa. Go to the next step if the meter needle indicates 5kPa or more. Disassemble and reassemble the transceiver if the meter needle indicates 5kPa or less.
- 4) Carefully place the transceiver into the water while the inside of the transceiver is pressurized.

Carefully place the transceiver into the water while the inside of the transceiver is pressurized.

DISASSEMBLY FOR REPAIR

The meter needle will move down gradually due to air leakage. Place the transceiver into the water before it reaches 5kPa.

Air leakage can be confirmed by air bubbles. When the meter needle indicates 3 to 4kPa (right side of meter), perform steps a) to e) in 3) above to increase the pressure to approximately 10kPa.

Note:

If the transceiver is left under water when the meter needle is 0kPa, water may be leaked inside the transceiver. Take the transceiver out of the water before the meter needle reaches 3kPa. Because the meter needle indicates 3kPa or more, pressurized air in the transceiver is released in water as bubbles, so water cannot leaked inside the transceiver.

- 5) Observe the transceiver while it is under water, while paying attention to the meter needle value.

With the transceiver under water, air leaks if air bubbles are produced continuously.

If air bubbles are not produced continuously, it is not a leakage location.

Note:

If air bubbles come out of the speaker grill and are not continuous, they are air that is collected in the front of the speaker and do not indicate a leakage location.

- 6) Identify the component from which continuous air bubbles are released.

- 7) Remove the transceiver from the water, wipe off the water and dry it completely.

Shake the transceiver to remove excess water from the microphone and speaker grill.

Sound may be muffled or distorted if water remains in the microphone and speaker grill.

Wipe off the battery terminal on the rear of the chassis.

Note:

Take special care because water collected between the transceiver case and chassis may be leaked inside the transceiver during disassembly and damage the transceiver components.

- 8) After the transceiver is dried completely, replace the components with the leakage location identified while paying attention to foreign matters.

Refer to page 17 for parts concerning the waterproof of each leakage location.

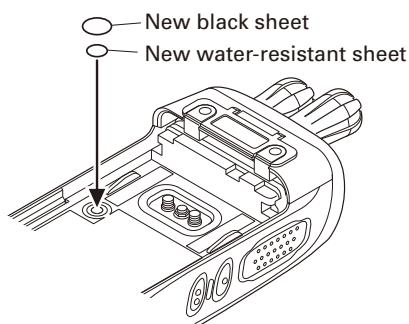

- 9) Perform the "Water Resistance Confirmation" on page 14 after reassembly.

■ Attaching the water-resistant sheet and black sheet

Attach a new water-resistant sheet to the screw hole on the rear of the chassis, then attach a new black sheet onto the water-resistant sheet.

Note:

- Remove any adhesive trace from the location where the water-resistant sheet and black sheet of the chassis is attached before attaching a new water-resistant sheet and black sheet to the screw hole.
- Attach the water-resistant sheet and black sheet to the chassis firmly; failure to do so may allow water to pass into the transceiver.

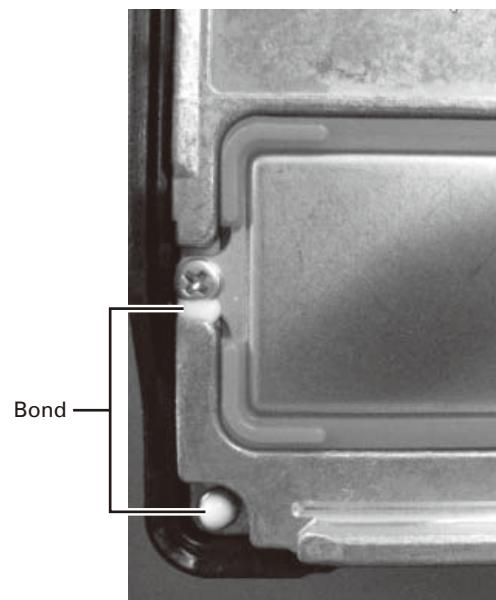

■ After repairing and reassembling

After repairing and reassembling, apply bond to the top of the left side screw for the chassis and between the chassis and the left side screw for the option board cover.

Note:

- Take care that the bond does not protrude above the chassis surface. (Take care that the bond does not come into contact with the battery.)
- Use a silicon based bond.

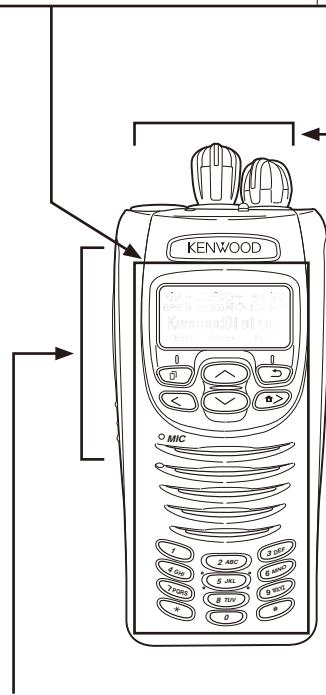

DISASSEMBLY FOR REPAIR

CIRCUIT DESCRIPTION

1. Overview

The NX-300 is a UHF portable transceiver designed to operate in the frequency range of 400 to 470MHz. The unit consists of receiver, transmitter, phase-locked loop (PLL) frequency synthesizer, base band parts, power supply, and control circuits.

2. Frequency Configuration

The receiver is a double-conversion superheterodyne using the first intermediate frequency (IF) of 58.05MHz and the second IF of 450kHz. Incoming signals from the antenna are mixed with the local signal from the PLL circuit to produce the first IF of 58.05MHz. This is then mixed with the 57.6MHz second local oscillator output to produce the 450kHz second IF. The transmit signal frequency is generated by the PLL VCO, and modulated by the signal from the DSP. It is then amplified and fed to the antenna.

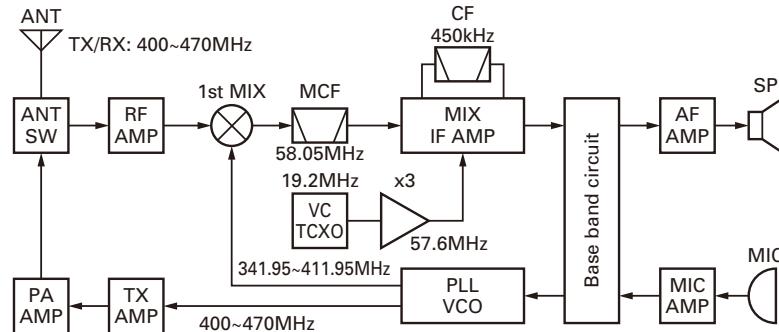

Fig. 1 Frequency configuration

3. Receiver System

3-1. RF Circuit

An incoming RF signal from the antenna terminal is passed through the antenna switch (D606, D607, D709, D711) and then the bandpass filter (L721, L722). The bandpass filter is adjusted by a variable capacitor. The input voltage to the variable capacitor is regulated by the voltage output from the D/A converter (IC703). The signal is amplified by an RF amplifier (Q705), and passed through the bandpass filter (L713, L714, L715). The resulting signal is applied to the first mixer (Q703), where it is mixed with the first local oscillator signal output from the frequency synthesizer to produce the first IF (58.05MHz).

3-2. IF Circuit

The first IF signal is passed through a four-pole monolithic crystal filter (XF700) to reject adjacent channel signals. The filtered first IF signal is amplified by the first IF amplifier (Q701) and then applied to the IF system IC (IC701). The IF system IC provides a second mixer, AGC amplifier, and RSSI (Received Signal Strength Indicator).

The second mixer mixes the first IF signal with the 57.6MHz of second local oscillator output and produces the second IF signal of 450kHz.

The second IF signal is passed through the ceramic filter (CF700) to reject the adjacent channel signal. The filtered second IF signal is amplified by the AGC amplifier.

The signal from the AGC amplifier is input to the ASIC (IC108) through the ceramic filter (CF701) and operational amplifier (IC700).

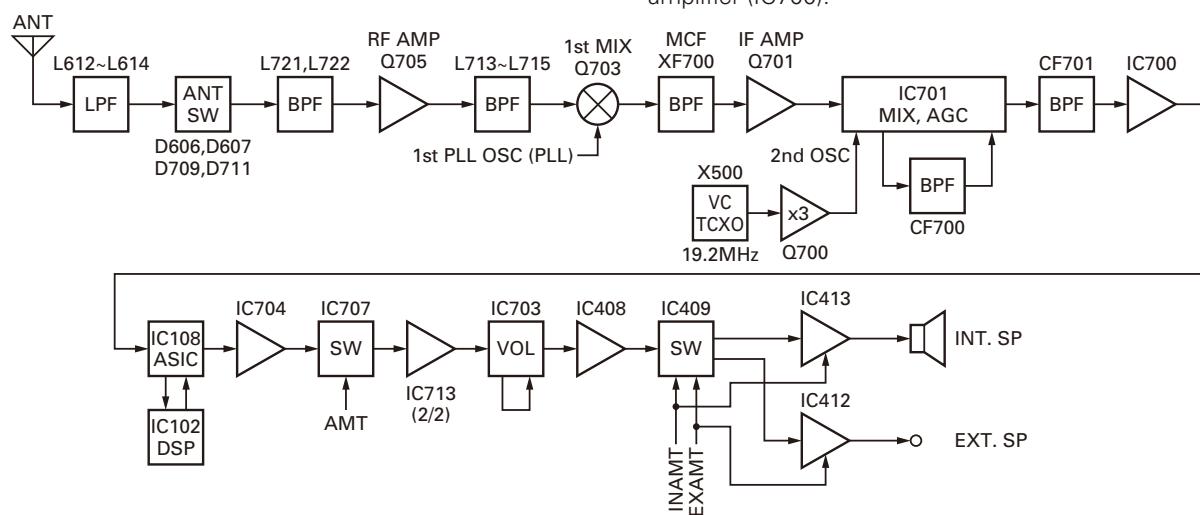

Fig. 2 RF and IF circuit

CIRCUIT DESCRIPTION

3-3. Audio Amplifier Circuit

Audio processing (high-pass filter, low-pass filter, de-emphasized and so on) at FM mode and decoding at NXDN mode are processed by DSP. The audio signal from IC108 and IC102 goes through the amplifier (IC704). The signal then goes through a mute switch (IC707), amplifier (IC713), electronic volume control (IC703), and AF amplifier (IC408).

While busy, AMT becomes Low to turn IC707 on, and the signal is fed to the AF switch. While INAMT is High, the AF switch (IC409) selects the internal speaker, and the audio signal is fed to the internal audio power amplifier (IC413), and output to the internal speaker. While EXAMT is High, the AF switch (IC409) selects the external speaker, and the audio signal is fed to the external audio power amplifier (IC412), and output to the external speaker. The power supply for IC413 and IC412 is turned on while INAMT or EXAMT is High.

The speaker is switched by the logic of the speaker switching terminal SSW on the universal connector. When the SP-MIC is not attached, SSW becomes High. IC108 detects the logic of SSW and activates either INAMT or EXAMT.

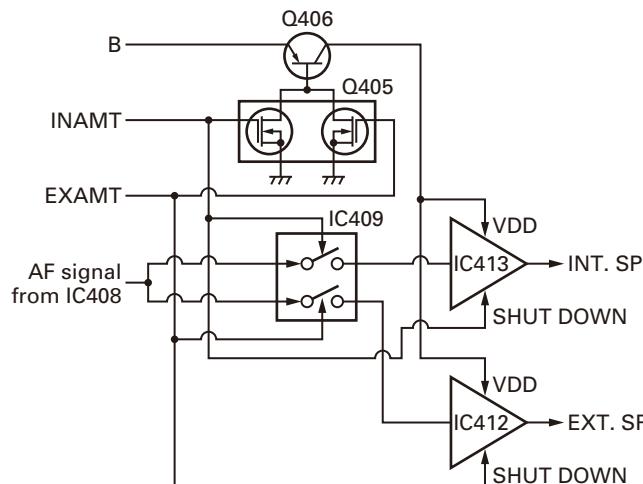

Fig. 3 Audio amplifier circuit

3-4. Squelch Circuit

It amplifies the demodulated noise signal from IC108 after filtering through the BPF circuit. Then, the amplified signal is converted to a DC signal by the detection circuit. The converted signal is fed back to IC108.

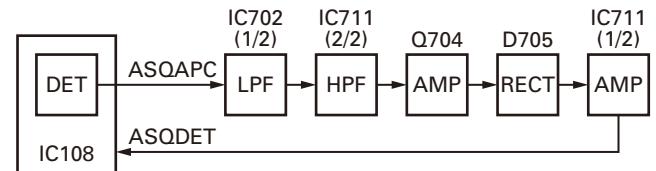

Fig. 4 Squelch circuit

4. Transmitter System

4-1. Audio Band Circuit

The signal from the internal microphone goes through the mute switch (Q5). When the SP-MIC is not attached, the microphone switching terminal (MSW) on the universal connector becomes High, and the mute switch (Q5) is turned on. When the SP-MIC is attached, MSW is connected to GND inside the SP-MIC. For this reason, Q5 is turned off, the internal microphone is muted, and only the input of the external microphone is supplied to the microphone amplifier. The signal from the microphone goes through the mute switch (Q707), and is amplified by IC716 (1/2) and limited by the AGC circuit which is composed of D703, D704, Q705 and Q706.

4-2. Base Band Circuit

The audio signal output from the base band circuit is converted to digital data with a sampling frequency of 48kHz. This digital data is sent to the DSP (IC102), and voice signals of 300Hz or lower and frequencies of 3kHz or higher are cut off and an audio range of 300Hz to 3kHz is extracted. The audio signal is then pre-emphasized in FM mode and synthesized with the signals, such as QT and DQT, as required, and is then output from IC108. In Digital mode, the audio signal is converted to the 4-Level FSK base band signal and output from IC108. The DTMF and MSK base band signals are also generated by the DSP and output by IC108.

LPF (IC705) works as a smoothing filter. The DAC (IC703) assigns the base band signal to the VCO and VCTCXO (X500). At this time, the level output according to the transmit carrier is fine-adjusted according to each modulation method.

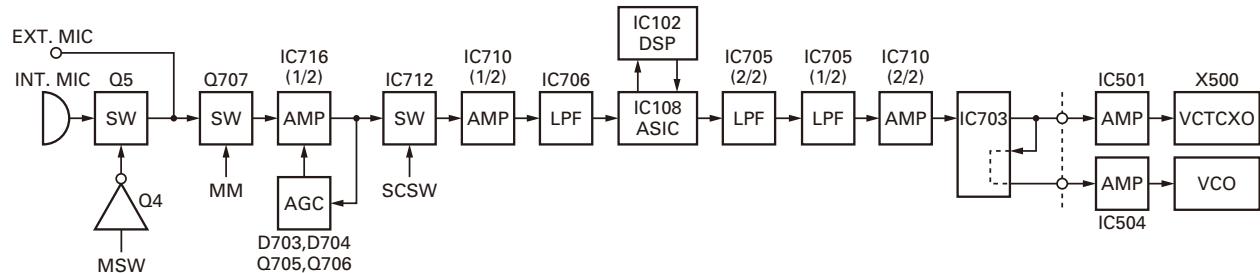

Fig. 5 Audio band and Base band circuit

CIRCUIT DESCRIPTION

4-3. VOX

IC716 (2/2) amplifies the audio signal captured in the microphone. The signal is then converted into the DC voltage, rectified by D706. The DC voltage activates the ASIC (IC108), and the VOX starts.

4-4. Drive and Final Amplifier

The signal from the T/R switch (D601 is on) is amplified by the drive amplifier (Q601, Q602 and Q603) to 25~27dBm. The output of the drive amplifier is amplified by the RF power amplifier (Q606) to 5.0W (1W when the power is low). The RF power amplifier is MOS FET. The output of the RF power amplifier is then passed through the harmonic filter (LPF) and antenna switch (D606, D607 are on) and applied to the antenna terminal.

4-5. APC Circuit

The APC circuit always monitors the current flowing through the RF power amplifier (Q606) and keeps a constant current. The voltage drop at R642, R645 and R647 is caused by the current flowing through the RF power amplifier and this voltage is applied to the differential amplifier (IC600 1/2). IC600 (2/2) compares the output voltage of IC600 (1/2) with the reference voltage from IC108, and the output of IC600 (2/2) controls the VGG of Q602, Q603 and Q606 to make the both voltages the same. The change of power high/low is carried out by the change of the reference voltage. Q607, Q608 and Q610 are turned on and Q604 and Q605 are turned off in transmit and the APC circuit is active.

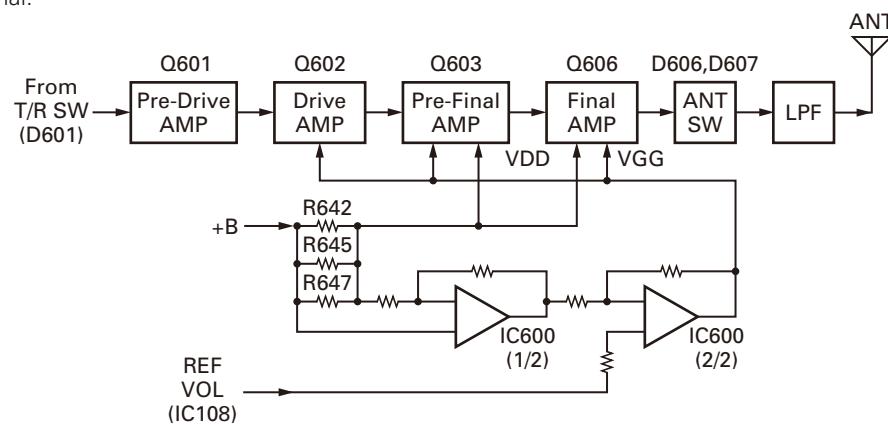

Fig. 6 Drive and final amplifier and APC circuit

5. PLL Frequency Synthesizer

5-1. VCTCXO (X500)

VCTCXO (X500) generates a reference frequency of 19.2MHz for the PLL frequency synthesizer. This reference frequency is applied to pin 9 of the PLL IC (IC502) and connected to the IF circuit as a 2nd local signal through the Tripler (Q700). The VCTCXO oscillation frequency is determined by the DC voltage of the VC terminal. The VC voltage is fixed to 1.65V by R500 and R501, and supplied to the VC terminal through IC501. The modulation signal is also fed to the VC terminal through IC501.

The frequency adjustment is achieved by switching the ratio of the dividing frequency that is not adjusted by the DC voltage impressed to the VC. The resolution of the adjusting frequency is approximately 4Hz.

5-2. VCO

There is a RX VCO and a TX VCO.

The TX VCO (Q509) generates a transmit carrier and the RX VCO (Q508) generates a 1st local signal. For the VCO oscillation frequency, the transmit carrier is 400 to 470MHz and the 1st local signal is 341.95 to 411.95MHz.

The VCO oscillation frequency is determined by one system of operation switching terminal "T/R" and two systems of voltage control terminals "CV" and "ASSIST".

The operation switching terminal, "T/R", is controlled by the control line /T_R output from the ASIC (IC108). When the /T_R logic is low, the VCO outputs the transmit carrier and when it is high, it outputs a 1st local receive signal.

The voltage control terminals, "CV" and "ASSIST", are controlled by the PLL IC (IC502) and ASIC (IC108) and the output frequency changes continuously according to the applied voltage. For the modulation input terminal, "VCO_MOD", the output frequency changes according to the applied voltage. This is used to modulate the VCO output. "VCO_MOD" works only when "/T_R" is low.

CIRCUIT DESCRIPTION

5-3. PLL IC (IC502)

The PLL IC compares the differences in phases of the VCO oscillation frequency and the VCTCXO reference frequency, returns the difference to the VCO CV terminal and realizes the "Phase Locked Loop" for the return control. This allows the VCO oscillation frequency to accurately match (lock) the desired frequency.

When the frequency is controlled by the PLL, the frequency convergence time increases as the frequency difference increases when the set frequency is changed. To supplement this, the ASIC is used before control by the PLL IC to bring the VCO oscillation frequency close to the desired frequency. As a result, the VCO CV voltage does not change and is always stable at approximately 2.5V.

The desired frequency is set for the PLL IC by the ASIC (IC108) through the 3-line "SDO1", "SCK1", "/PCS_RF" serial bus. Whether the PLL IC is locked or not is monitored by the ASIC through the "PLD" signal line. If the VCO is not the desired frequency (unlock), the "PLD" logic is low.

5-4. Local Switch (D600, D601)

The connection destination of the signal output from the buffer amplifier (Q600) is changed with the diode switch (D601) that is controlled by the transmission power supply, 50T, and the diode switch (D600) that is controlled by the receive power supply, 50R. If the 50T logic is high, it is connected to a send-side pre-drive (Q601). If the 50T logic is low, it is connected to a receive-side mixer (Q703).

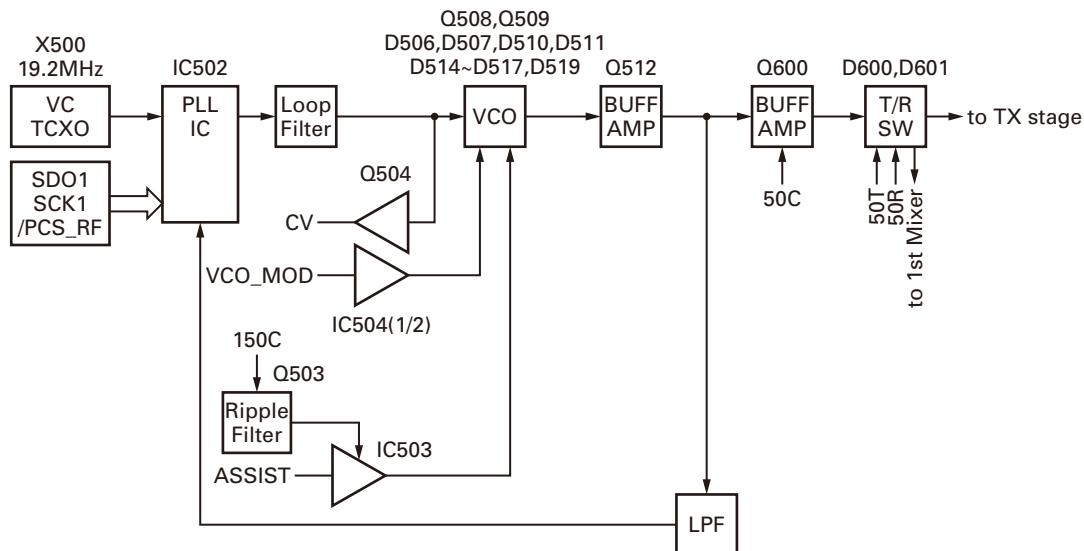

Fig. 7 PLL block diagram

6. Control Circuit

The control circuit consists of the ASIC (IC108) and its peripheral circuits. IC108 mainly performs the following;

- 1) Switching between transmission and reception by PTT signal input.
- 2) Reading system, zone, frequency, and program data from the memory circuit.
- 3) Sending frequency program data to the PLL.
- 4) Controlling squelch on/off by the DC voltage from the squelch circuit.
- 5) Controlling the audio mute circuit by decode data input.

6-1. ASIC

The ASIC (IC108) is a 32-bit RISC processor, equipped with peripheral function and ADC/DAC.

This ASIC operates at 18.432MHz clock and 3.3V /1.5V DC. It controls the flash memory, SRAM, DSP, the receive circuit, the transmitter circuit, the control circuit, and the display circuit and transfers data to or from an external device.

CIRCUIT DESCRIPTION

6-2. Memory Circuit

The memory circuit consists of the ASIC (IC108) and the SRAM (IC103) and flash memory (IC101). The flash memory has capacity of 32M-bit that contains the transceiver control program for the ASIC and stores the data. It also stores the data for transceiver channels and operating parameter that are written by the FPU. This program can be easily written from external devices. The SRAM has capacity of 1M-bit that contains work area and data area.

■ Flash memory

Note: The flash memory stores the data that is written by the FPU (KPG-111D), tuning data (Deviation, Squelch, etc.) ,and firmware program (User mode, Test mode, Tuning mode, etc.). This data must be rewritten when replacing the flash memory.

■ SRAM (Static memory)

Note: The SRAM has temporary data area and work area. When the power supply is off, it is backed up by an internal secondary lithium battery. Therefore, the saved data is not lost.

■ Real-time clock

The clock function is based on real-time clock IC (IC106). When the power supply is off, it is backed up by an internal secondary lithium battery.

6-3. LCD

The LCD is controlled using the bus lines on the connector (CN1) of the Control unit (X53-426). It corrects the LCD contrast voltage using IC1.

6-4. Key Detection Circuit

Keys are detected using the key scan circuit in IC108. The /KEYI* signals that are normally pulled down go high when any key is pressed.

6-5. Low Battery Warning

The battery voltage is divided using R444 and R445 and is detected by the ASIC (IC108). When the battery voltage falls below the voltage set by the Low battery warning adjustment, the red LED blinks to notify the operator that it is time to replace the battery. If the battery voltage falls even more (approx. 5.8V), a beep sounds and transmission stops.

Low battery warning	Battery condition
The red LED blinks during transmission.	The battery voltage is low but the transceiver is still usable.
The red LED blinks and the warning tone beeps while the PTT switch is pressed.	The battery voltage is low and the transceiver is not usable to make calls.

6-6. DSP

The DSP circuit consists of a DSP (IC102) and processes the base band signal. The DSP operates on an external clock of 18.432MHz (the same as the IC108), the I/O section operates at 3.3V and the core section operates at 1.5V. The DSP carries out the following processes:

- 4 Level FSK processing
- Analog FM pre-emphasis/de-emphasis
- Vocoder processing between audio codec and modulation/demodulation
- CAI processing, such as error correction encoding
- QT/DQT encoding/decoding
- LTR encoding/decoding
- DTMF encoding/decoding
- MSK encoding/decoding
- 2-tone encoding/decoding
- Compressor/expander processing
- Voice scrambler processing
- Transmit/receive audio filtering processing
- Microphone amplifier AGC processing
- Audio mute processing
- Modulation level processing

7. Power Supply Circuit

The battery voltage (+B) is provided from the battery terminal on the TX/RX unit (X57). The battery voltage passes through the 2.5A fuse (F900), and goes to the RF final amplifier, AVR ICs (IC902, IC903), and Control unit (X53-426).

In the control unit, +B is connected to the DC/DC (IC407), AVR ICs (IC411, IC708, IC416), and voltage detector IC (IC414). The voltage detector watches the battery voltage. If the battery voltage is 5.6V or higher, the detector outputs High. While the output of IC414 is High, IC416 and Q409 provide 3.1V (31BU) to the backup-section.

When the VOL SW is turned on, SB1 becomes high (battery voltage). The DC/DC (IC407) operates if both SB1 and the output of the detector are high. IC407 outputs 3.8V and it activates IC404 (33M), IC717 (15M), and IC406 (33A). As a result, the ASIC and DSP operate.

The SBC signal becomes High after the ASIC operates, IC708 (5A), Q403 on the Control unit (SB2) and Q901 on the TX-RX unit (SB3) are turned on. IC901 and IC903 operate by turning on these AVR ICs and FET switches.

The 5UC signal becomes High when an option is installed on the universal connector. Then IC411 (50U) operates.

When the /SAVE signal becomes High, IC902 (50C) operates. The output of IC902 is connected to three FET switches (Q902, Q903, Q905). When the SBC signal becomes High, IC903 (33C) operates. The FET switches are controlled by the CPU. Q905 (50T) is turned on in transmit mode. Q902 (50R) and Q903 (50IF) are turned on in receive mode.

When the VOL SW is turned off the /PSW signal becomes Low. After detecting the /PSW signal, the ASIC changes SBC signal to Low. Then the power supplies except IC416 (31BU) stop.

CIRCUIT DESCRIPTION

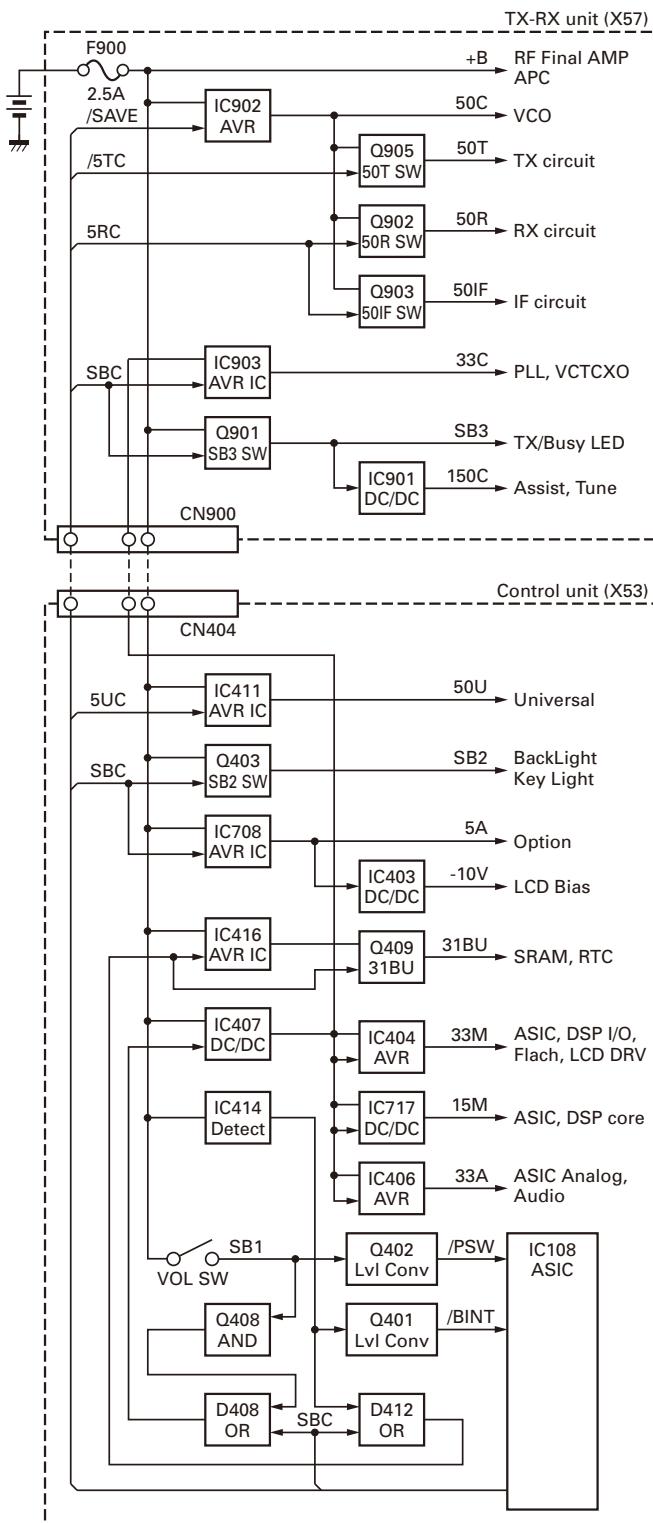

Fig. 8 Power supply circuit

8. Signaling Circuit

8-1. Encode (QT/DQT/LTR/DTMF/2-tone/MSK)

Each signaling data signal of QT, DQT, LTR, DTMF, 2-tone and MSK is generated by the DSP circuit, superposed on a modulation signal and output from IC108. The modulation balance of the QT/DQT/LTR signal is adjusted by the D/A converter (IC703) and the resulting signal is routed to the modulation input of the VCO and VCXO (X500). Each deviation of the TX QT, DQT, LTR, DTMF, 2-tone and MSK tone is adjusted by changing the output level of IC108 and the resulting signal is routed to the VCO and VCXO. The RX DTMF tone is routed to the receive audio signal system, and is output from the speaker.

8-2. Decode (QT/DQT/LTR/DTMF/2-tone/MSK)

The audio signal is removed from the FM detection signal sent to the DSP circuit and the resulting signal is decoded.

9. Comander Circuit

The term "comander" means compressor and expander. The comander reduces noise by utilizing a compressor and an expander. The transceiver contains a DSP (IC102) to perform this operation. The transceiver comander can be turned on or off using the FPU.

EXPLODED VIEW

Parts with the exploded numbers larger than 700 are not supplied.

If a part reference number is listed in a box on the exploded view of the PCB, that part does not come with the PCB. These parts must be ordered separately.

PACKING

Parts with the exploded numbers larger than 700 are not supplied.

TROUBLE SHOOTING

Fault Diagnosis of the BGA (Ball Grid Array) IC

■ Overview

A flowchart for determining whether or not the transceiver can be powered on (the LCD does not function even if the power switch is turned on) due to broken BGA parts.

■ BGA parts

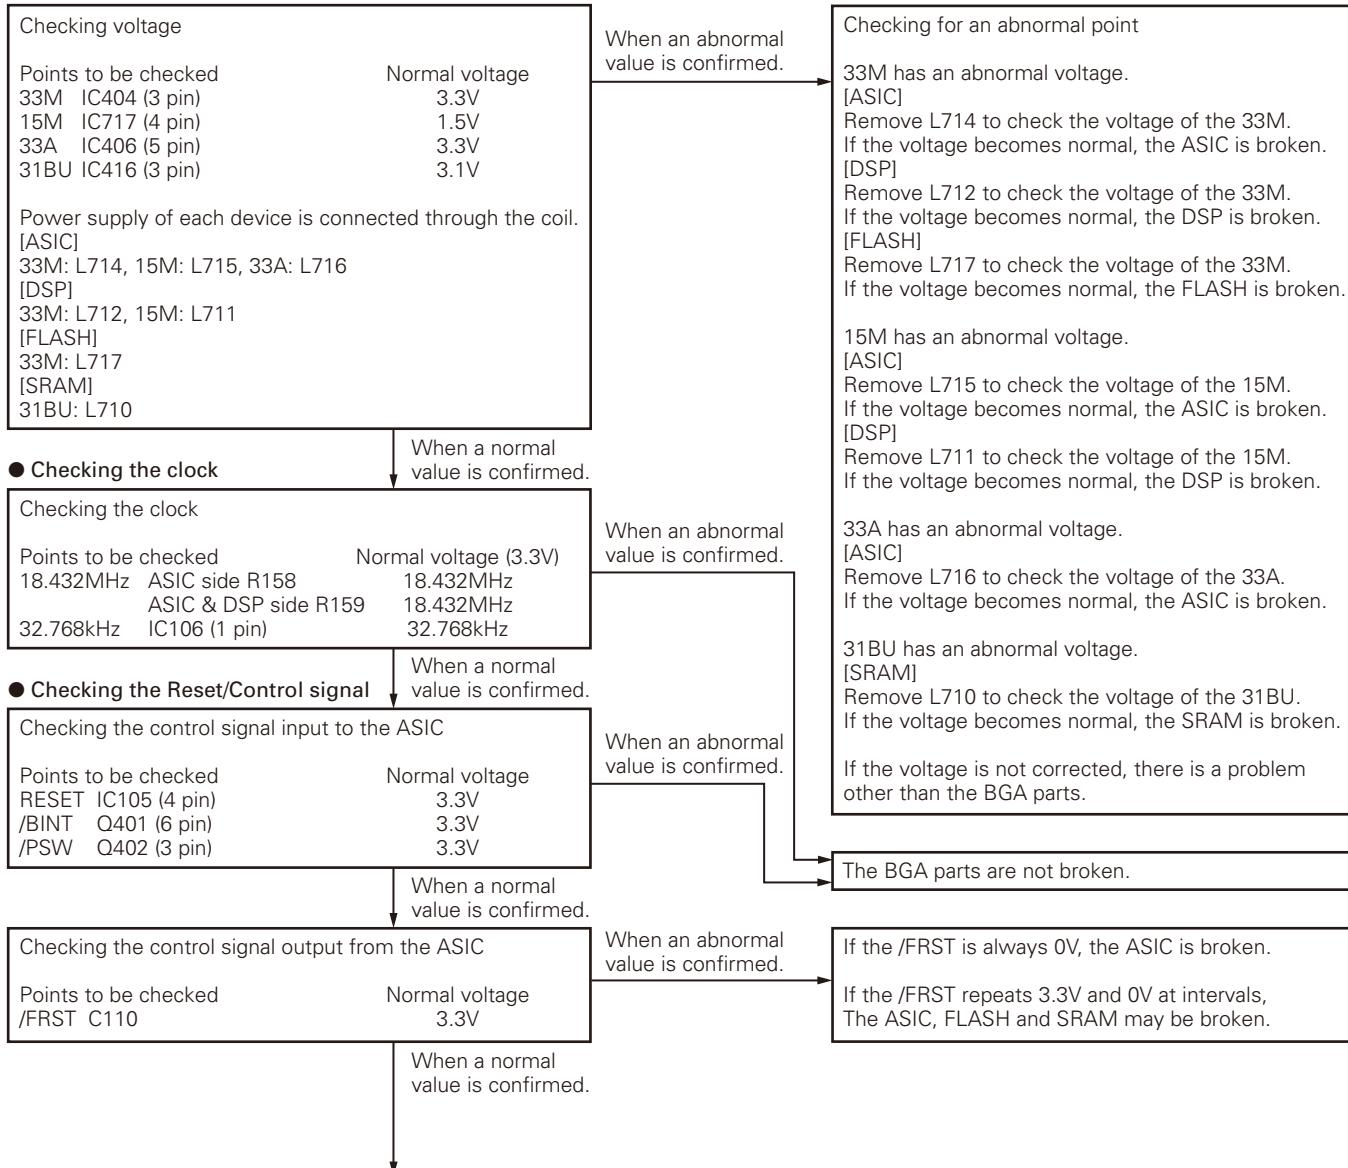

ASIC (IC108), DSP (IC102), FLASH (IC101), SRAM (IC103)

When the BGA IC is problematic, please bring the printed circuit board (X53-4262-73 for 6-key, X53-4262-74 for 18-key) in for service. Various ESN/default adjustment values are written on the printed circuit board for service.

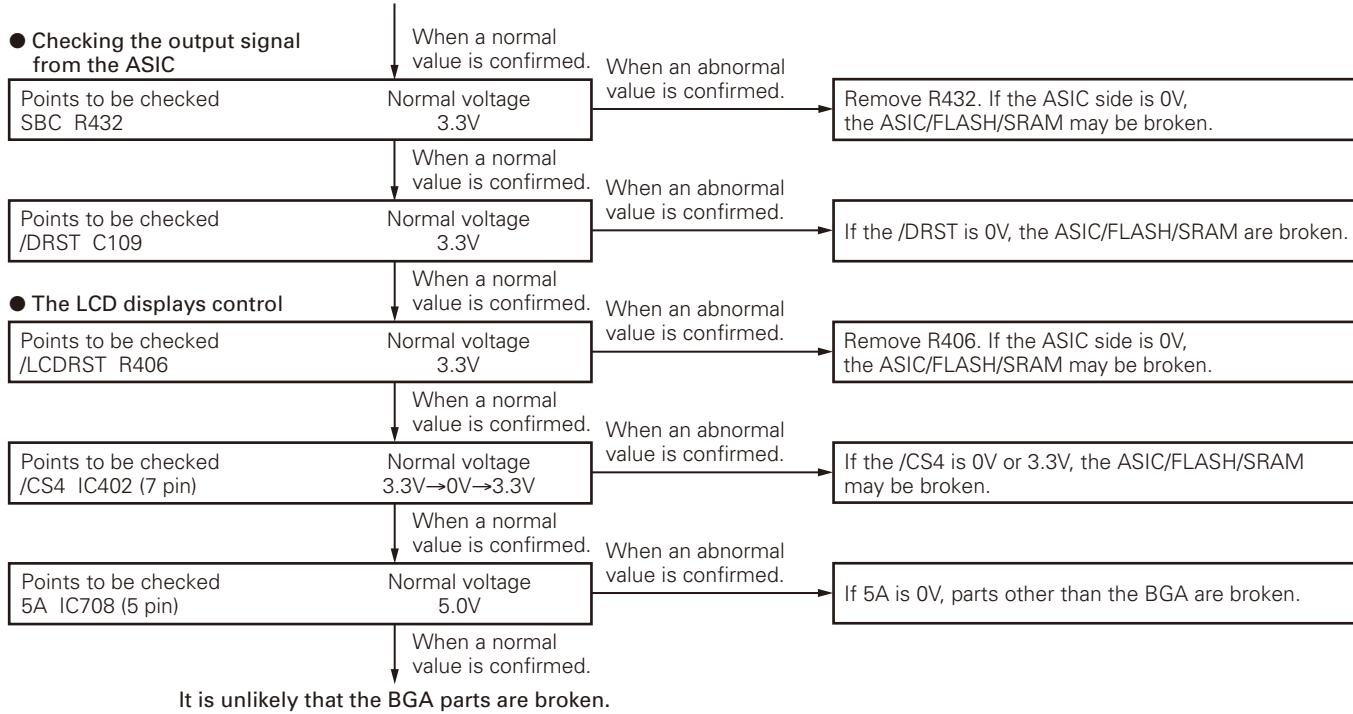

Additionally various ESN stickers are included. (Please refer to pages 41 and 42.)

Button type lithium battery (W09-0971-05) does not belong to the printed circuit board for service. Please use the part which has been attached to the printed circuit board. After the printed circuit board has been readjusted, please attach any ESN stickers to the chassis. When "ESN Validation" is used with NXDN Trunking, you must modify the ESN register.

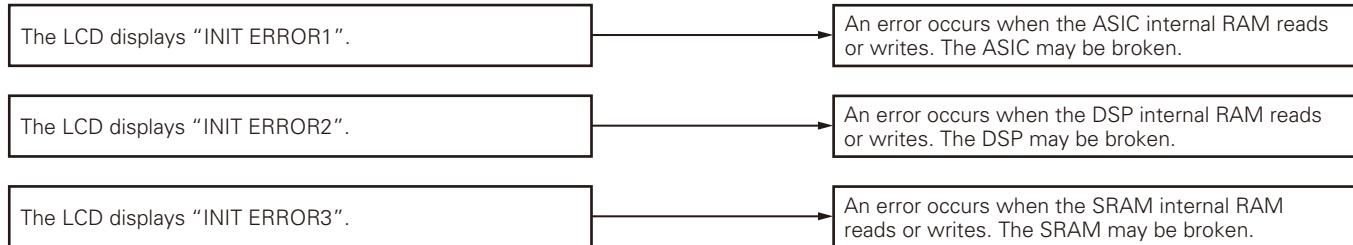

● Checking power supply voltage

TROUBLE SHOOTING

● When an error display appears on the LCD.

■ Descriptions of signal names

1) RST(RESET)	: ASIC reset signal	LOW → Reset
2) /BINT	: Battery final voltage monitoring	LOW → Final voltage
3) /PSW	: Power switch signal	LOW → ON
4) /FRST	: FLASH reset signal	LOW → Reset
5) SBC	: Switch B control	HIGH → ON
6) /DRST	: DSP reset signal	LOW → Reset
7) /LCDRST	: LCD reset signal	LOW → Reset
8) /CS4	: LCD controller chip select signal	LOW → Active
9) 5A	: Analog peripheral control 5.0V power supply	

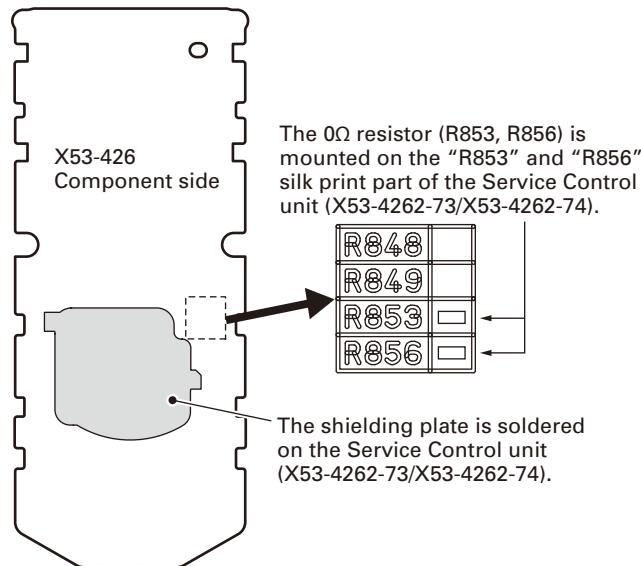

TROUBLE SHOOTING

Replacing Control Unit

■ Control unit Information

Model Name	Original Control unit Number	For Service Control unit Number
NX-300 (E: 18-key)	X53-4262-72	X53-4262-74
NX-300 (E4: 6-key)	X53-4262-71	X53-4262-73

■ Method of confirming "Original Control unit" and "Service Control unit"

X53-426	R848	R849	R853	R856
2-71	0Ω	(None)	(None)	0Ω
2-72	(None)	0Ω	(None)	0Ω
2-73	0Ω	(None)	0Ω	0Ω
2-74	(None)	0Ω	0Ω	0Ω

Note:

- The 0Ω resistor (R848, R849, R853 and R856) is used to differentiate the destination with a visual check. These are not connected with any PCB pattern; they are specifically for production control. There is no need to change the mount of these resistors.
- There is no difference between the schematic diagram of the Service Control unit (X53-4262-73/X53-4262-74) and the schematic diagram of the original Control unit (X53-4262-71/X53-4262-72). (R848, R849, R853 and R856 are connected with GND (ground) only.)

■ Supplied Accessories of "Service Control unit"

Item (Including Part Number)	Quantity
	Ex
Control Unit (X53-426)	1
Kenwood ESN Label	1
NXDN ESN Label	1
MPT ESN Label	1
Addendum (B59-2576-XX)	1

Note:

- "Ex" refers to an E-type series (E4 for example).

■ "Service Control unit" Data

The following data is written on the service control unit:

Data Type	Description
Firmware	NX-200/300 Firmware.
FPU Data (PC programming mode)	X53-426 (NX-300) Ex type data.
Various Adjustment Data (PC Test mode)	General adjustment values for the X53-426 (NX-300).
Model Name: Kenwood ESN	Model Name: [X53-426] NX-xxxS Type: Ex The same number as the Kenwood ESN label is written.
NXDN ESN/ MPT ESN	The same number as the NXDN ESN/ MPT ESN label is written.

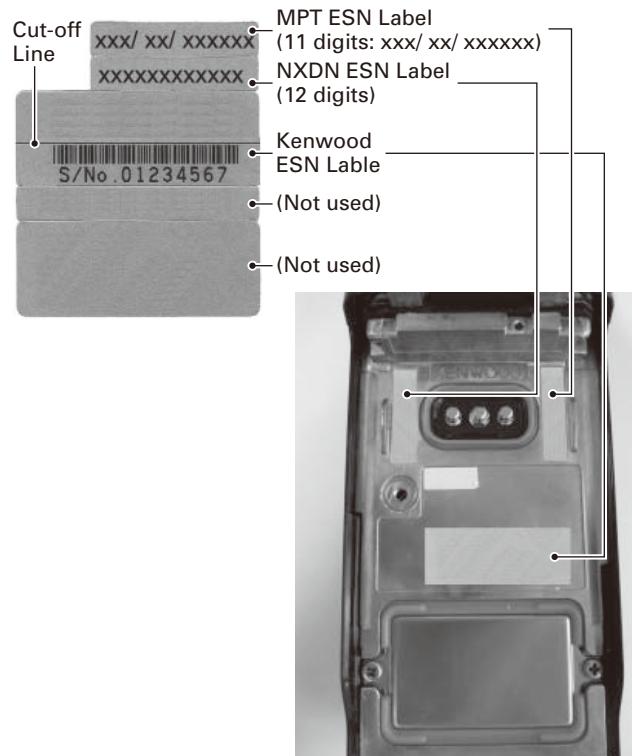

■ After Changing the PCB

- After changing the printed circuit board, write the up-to-date Firmware following the instructions in the "RE-ALIGNMENT - 6.Firmware Programming Mode".
- Using the KPG-111D, select your desired item (Model Name and Frequency) from the Model> Product Information menu, then use Program> Write Data to the Transceiver to write the FPU data (PC Programming mode). When writing to the transceiver, a Warning Message, corresponding to the item selected, appears. Click [OK] to continue writing the data.
- Enter Program> Test Mode, then adjust the various adjustment data (PC Test Mode) as described in the "ADJUSTMENT".
- Attach the new labels corresponding to the new printed circuit board. (Refer to the images on page 42 for label placement.)
- If necessary, write the FPU data used by the customer with the KPG-111D.

TROUBLE SHOOTING

Note:

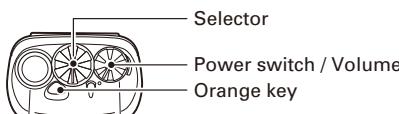

- When using the ESN Validation function of NXDN Trunking, the NXDN ESN number changes when the circuit board is changed (the number is written on the circuit board); the NXDN Trunking System cannot be accessed. Use the KPG-110SM on the NXDN Trunking System side to reprogram the NXDN ESN number.
- When a new printed circuit board is used, the Kenwood ESN changes, as does the Transceiver Information display of the KPG-111D, but this does not have any effect on the operation of the transceiver.
- If changing to the original Kenwood ESN and NXDN ESN, please contact our service center.

Note: A UPC code and UPC barcode is not printed on the Kenwood ESN Label. If necessary, cut the label at the cut-off line and attach only the serial number.

ADJUSTMENT

Controls

Panel Test Mode

■ Test mode operation features

This transceiver has a test mode. **To enter test mode, press and hold the [>] key while turning the transceiver power ON. Before the transceiver enters test mode, the frequency version information appears on the LCD momentarily.** Test mode can be inhibited by programming. To exit test mode, turn the transceiver power OFF. The following functions are available in test mode.

ADJUSTMENT

■ Key operation

3	RAN1	Maximum deviation pattern

RAN: Radio Access Number

PN9: Pseudo-Random Pattern (for production only)

Panel Tuning Mode

■ Preparations for tuning the transceiver

Before attempting to tune the transceiver, connect the unit to a suitable power supply.

Whenever the transmitter is turned, the unit must be connected to a suitable dummy load (i.e. power meter).

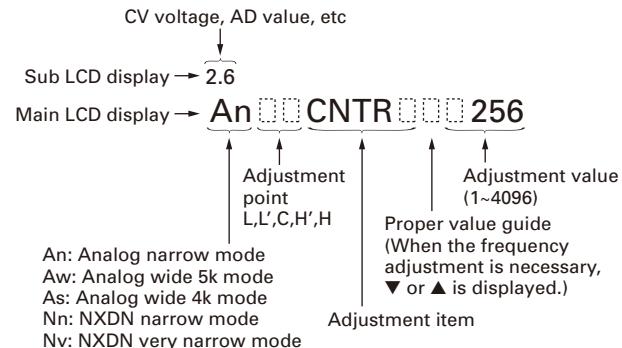

The speaker output connector must be terminated with a 8Ω dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during tuning.

■ Transceiver tuning (To enter tuning mode)

To enter tuning mode, press the [■] key while the transceiver is in test mode. Use the [<] key to write tuning data through tuning modes, and the [↑]/[↓] key to adjust tuning requirements (1 to 4096 appears on the LCD).

Use the [→] key to select the adjustment item through tuning modes. Use the [▲] key to adjust 5 reference level adjustments, and use the [Side2] key to switch between Wide 5k/Wide 4k/Narrow/Very narrow.

• LCD display in panel tuning mode

■ Key operation

Key	Function	
	Push	Hold (1 second)
[Selector]	-	-
[↑]	Adjustment value up	Continuation up
[↓]	Adjustment value down	Continuation down
[Side1]	Auto adjustment start	-
[Side2]	Wide 5k/Wide 4k/ Narrow/Very narrow	-
[■]	Shift to panel test mode	-
[▲]	To enter 5 reference level adjustments	-
[<]	Writes the adjustment value	-
[→]	Go to next adjustment item	Back to last adjustment item
[Orange]	-	-
[PTT]	Transmit	
[0] to [9] and [#, [*]	-	

■ 5 reference level adjustments frequency

Tuning point	RX (MHz)	TX (MHz)
Low	400.05000	400.10000
Low'	417.55000	417.60000
Center	435.05000	435.10000
High'	452.55000	452.60000
High	469.95000	469.90000

ADJUSTMENT

■ Adjustment item supplement

Adjustment Item	Description
LCD contrast	The contrast of LCD display can be changed.
Counterclockwise Volume	"Counterclockwise Volume" is adjusted at the minimum volume position. "Clockwise Volume" is adjusted at the maximum volume position. These adjustments can correct the volume variation.
Clockwise Volume	Both "Counterclockwise Volume" and "Clockwise Volume" must be adjusted. (The curve data of volume is applied.)
Receive Assist	The lock voltage of VCO (Receive) is adjusted. This item must be adjusted before all adjustment items for receiver section are adjusted.
Transmit Assist	The lock voltage of VCO (Transmit) is adjusted. This item must be adjusted before all adjustment items for transmitter section are adjusted.
Frequency	Frequency stability is adjusted under receiving condition with SSG. The SSG needs 0.001ppm accuracy so please use a standard oscillator if necessary. This item can be adjusted only in PC Test Mode so that the adjustment value is not changed easily.
RTC	Real-Time Clock (RTC) is adjusted. This item uses the internal clock. (Any measurement equipment is not required.)
High Transmit Power	High Transmit Power is adjusted.
Low Transmit Power	Low Transmit Power is adjusted.
Balance	The transmit audio frequency response is adjusted. This item is adjusted so that the deviation of 2kHz becomes the same deviation of 20Hz. This item must be adjusted before all adjustment items for deviations are adjusted.
Maximum Deviation (NXDN Narrow/Very Narrow)	Maximum Deviation of NXDN (Narrow/Very Narrow) is adjusted.
Maximum Deviation (Analog Wide 5k/Wide 4k/ Narrow)	Maximum Deviation of Analog (Wide 5k/Wide 4k/Narrow) is adjusted. This item must be adjusted before all adjustment items for tone deviations are adjusted. Note: "Maximum Deviation (Analog Narrow)" must be adjusted before "CWID Deviation (NXDN Very Narrow)" is adjusted.
QT Deviation	QT tone deviation is adjusted.
DQT Deviation	DQT tone deviation is adjusted.
LTR Deviation	LTR tone deviation is adjusted.
DTMF Deviation	DTMF tone deviation is adjusted.
Single Tone Deviation	The deviation of Single Tone used in "2-tone" is adjusted.
MSK Deviation	MSK tone deviation is adjusted.
CWID Deviation	CWID tone deviation is adjusted. CWID is used to inform the others who is transmitting on a 6.25-kHz spacing channel. (In FCC rule, Analog mode or CWID is required for each channel-spacing.)
VOX 1	VOX sensitivity at "VOX 1" is adjusted.
VOX 10	VOX sensitivity at "VOX 10" is adjusted.
Sensitivity 1	Notch filter is adjusted. The performance of Receive Spurious Response is improved.
Sensitivity 2	Band-Pass Filter is adjusted. The performance of Receive Sensitivity is improved.
RSSI Reference	The minimum RSSI level for scan stop is adjusted.
Open Squelch	The squelch level at level "5" is adjusted.
Low RSSI	RSSI display level "■■■" is adjusted. Both "Low RSSI" and "High RSSI" must be adjusted. (The curve data of RSSI level is applied.)
High RSSI	
Tight Squelch	The squelch level at level "9" is adjusted.
Battery Warning Level	Battery Warning Level (LED blinking level) is adjusted. Battery Warning Level minus 0.4V is the transmission inhibited level.

ADJUSTMENT

■ Adjustment item and Display

Order	Adjusutment item	Main LCD display	Sub LCD display	Aw (Analog Wide 5k)	As (Analog Wide 4k)	An (Analog Narrow)	Nn (NXDN Narrow)	Nv (NXDN Very Narrow)	Adjust item Number

28	Battery Warning Level	BATT	(BATT measurement value)	1 point ADJ					Transmitter Section 15
1~256									

*1: Because NXDN Narrow is adjusted by adjusting Analog Narrow, it is not necessary to adjust NXDN Narrow.

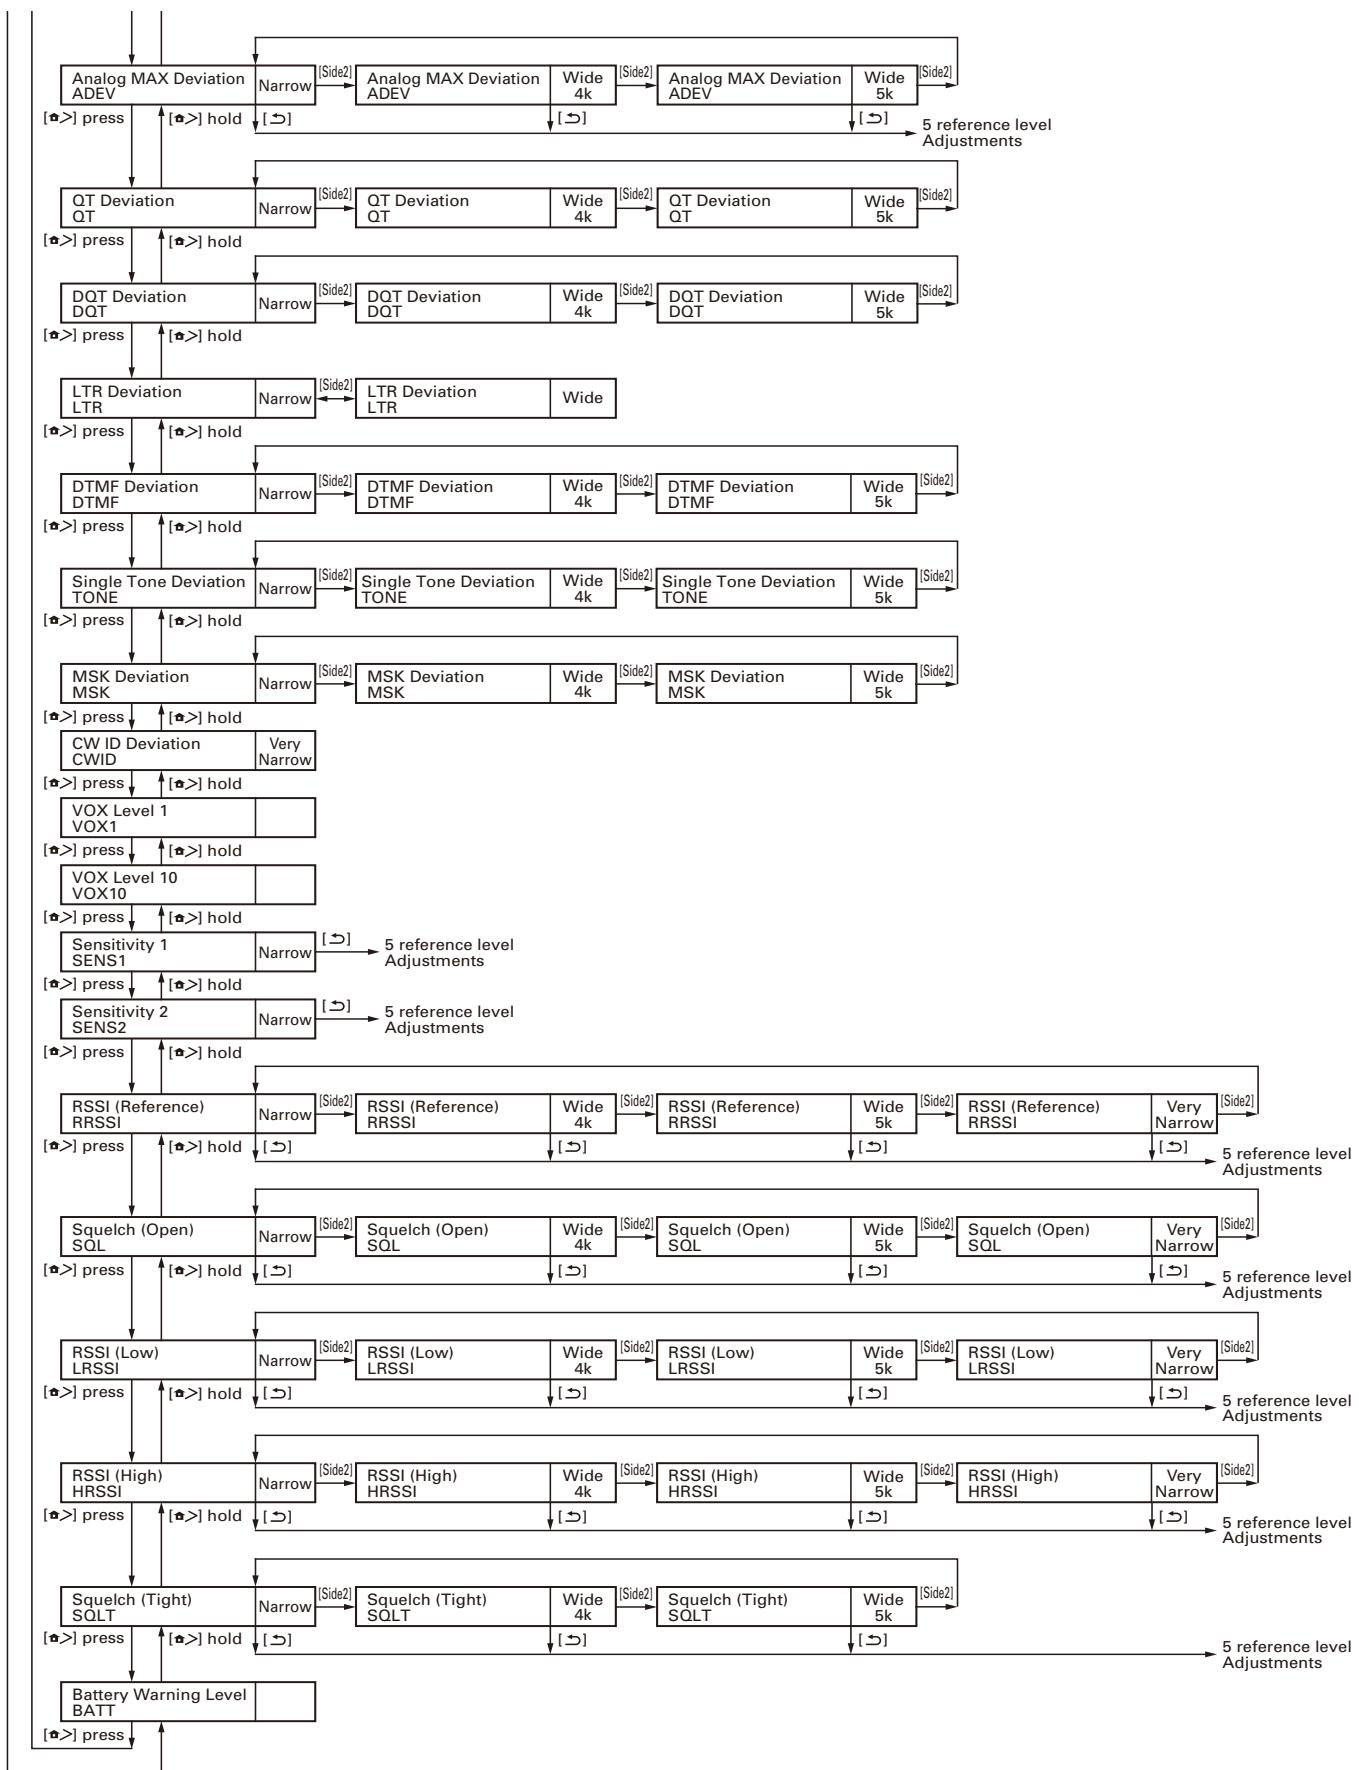

■ Panel tuning mode flow chart

Note: In this Panel tuning mode flow chart, the Adjustment item name is modified.

5 reference level Adjustments

ADJUSTMENT

ADJUSTMENT

Test Equipment Required for Alignment

Test Equipment	Major Specifications	
1. Standard Signal Generator (SSG)	Frequency Range Modulation Output When performing the Frequency adjustment, the following accuracy is necessary. • 0.001ppm	400 to 520MHz Frequency modulation and external modulation –127dBm/0.1µV to greater than –20dBm/22.4mV Use a standard oscillator for adjustments, if necessary.
2. Power Meter	Input Impedance Operation Frequency Measurement Capability	50Ω 400 to 520MHz Vicinity of 10W
3. Deviation Meter	Frequency Range	400 to 520MHz
4. Digital Volt Meter (DVM)	Measuring Range Input Impedance	10mV to 10V DC High input impedance for minimum circuit loading
5. Oscilloscope		DC through 30MHz
6. High Sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 1000MHz 0.2ppm or less
7. Ammeter		5A
8. AF Volt Meter (AF VTVM)	Frequency Range Voltage Range	50Hz to 10kHz 1mV to 10V
9. Audio Generator (AG)	Frequency Range Output	50Hz to 5kHz or more 0 to 1V
10. Distortion Meter	Capability Input Level	3% or less at 1kHz 50mV to 10Vrms
11. 8Ω Dummy Load		Approx. 8Ω, 3W
12. Regulated Power Supply		5V to 10V, approx. 3A Useful if ammeter equipped

■ Antenna connector adapter

The antenna connector of this transceiver uses an SMA terminal.

Use an antenna connector adapter [SMA(f) – BNC(f) or SMA(f) – N(f)] for adjustment. (The adapter is not provided as an option, so buy a commercially-available one.)

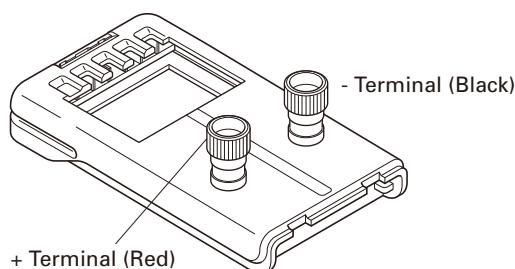

■ Nut wrench

In order to turn the volume nut and the channel selector nut, use a recommendation tool.

KENWOOD part No.: W05-1123-00

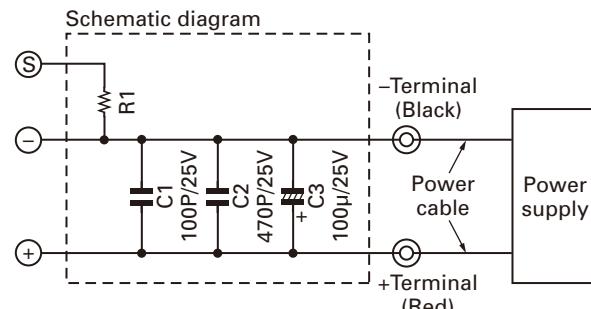

■ Battery jig (W05-1370-00)

Connect the power cable properly between the battery jig installed in the transceiver and the power supply, and be sure output voltage and the power supply polarity prior to switching the power supply ON, otherwise over voltage and reverse connection may damage the transceiver, or the power supply or both.

Note:

- When using the battery jig, you must measure the voltage at the terminals of the battery jig. Otherwise, a slight voltage drop may occur within the power cable, between the power supply and the battery jig, especially while the transceiver transmits.
- The battery jig is detected as "Li-ion High Capacity Battery".
Li-ion High Capacity Battery: R1=Open
Li-ion Normal Capacity Battery: R1=560kΩ

ADJUSTMENT

■ Universal connector

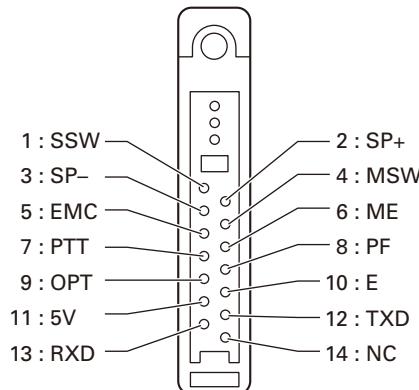

Use the interface cable (KPG-36/36A) for PC tuning or the lead wire with plug (E30-3287-28) and screw (N08-0535-08) for panel tuning. Connect the plug to the universal connector of the transceiver and tighten the screw.

The lead wire with plug (E30-3287-28) and screw (N08-0535-08) terminals are as follows. Numbers are universal connector terminal numbers.

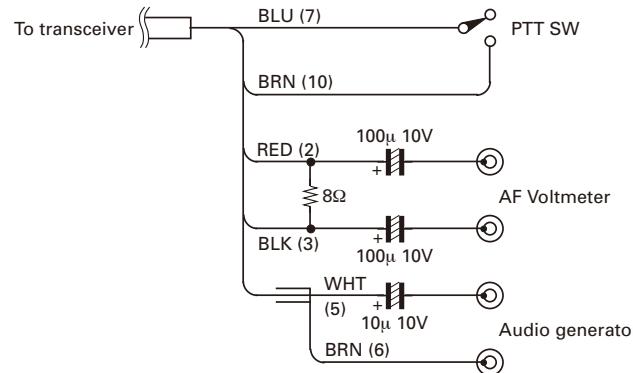

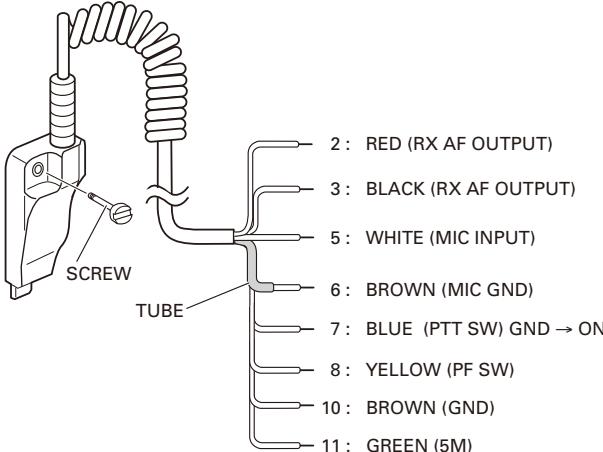

Caution

- When connecting the plug to the universal connector of the transceiver, a short circuit may occur. To prevent this, be sure to turn the transceiver POWER switch off.
- Since the RX AF output is a BTL output, there is a DC component. Isolate this with a capacitor or transformer as shown in the figure.
- Do not connect an instrument between red or black and GND.

• Universal connector

• Panel tuning

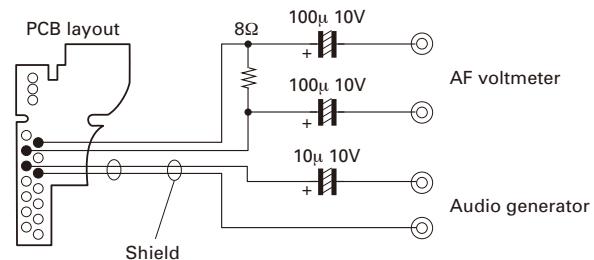

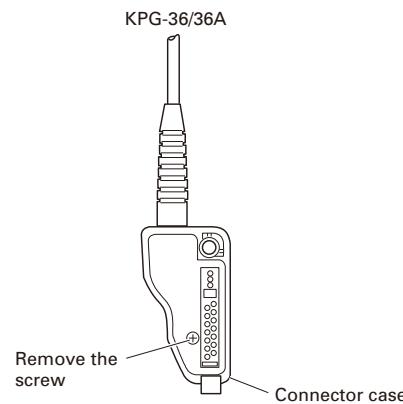

Note: Pin 1 (SSW) and Pin 4 (MSW) are connected to Pin 10 (GND) to active External SP and External MIC.

• PC tuning

Connect the wires to the PCB in the connector case of interface cable.

For output the wires out of the connector case, need to process the connector case.

ADJUSTMENT**Radio Check Section**

[PC test mode] Press [Apply] button to store the adjustment value.		
16. BATT detection check	[Panel test mode] 1) CH-Sig: 1-1 BATT terminal voltage: 6.0V while transmitting	1) Test Channel Channel: 1 Test Signaling Mode: Analog Signaling: 1 BATT terminal voltage: 6.0V while transmitting					Check	The transceiver can transmit with causing the LED to blink.	

ADJUSTMENT

■ Necessary Deviation adjustment item for each signaling and mode

The following shows the necessary adjustment items for each signaling deviation. Please read the following table like the following example. In the case of the signaling "QT (Wide 5k)", this signaling is composed of three elements [Balance, Maximum Deviation (Analog Wide 5k) and QT Deviation (Wide 5k)]. Please adjust Balance and Maximum Deviation (Analog Wide 5k) before adjusting QT Deviation (Wide 5k).

Mode	Signaling	Necessary adjustment and order			
		Wide 5k	Wide 4k	Narrow	Very Narrow
Analog	Audio	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 5k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 4k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow)	-
	QT	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 5k) Step3. QT Deviation (Wide 5k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 4k) Step3. QT Deviation (Wide 4k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow) Step3. QT Deviation (Narrow)	-
	DQT	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 5k) Step3. DQT Deviation (Wide 5k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 4k) Step3. DQT Deviation (Wide 4k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow) Step3. DQT Deviation (Narrow)	-
	LTR	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide) Step3. LTR Deviation (Wide)	-	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow) Step3. LTR Deviation (Narrow)	-
	DTMF	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 5k) Step3. DTMF Deviation (Wide 5k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 4k) Step3. DTMF Deviation (Wide 4k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow) Step3. DTMF Deviation (Narrow)	-
	2TONE	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 5k) Step3. Single Tone Deviation (Analog Wide 5k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 4k) Step3. Single Tone Deviation (Analog Wide 4k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow) Step3. Single Tone Deviation (Analog Narrow)	-
	MSK (FleetSync)	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 5k) Step3. MSK Deviation (Analog Wide 5k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 4k) Step3. MSK Deviation (Analog Wide 4k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow) Step3. MSK Deviation (Analog Narrow)	-
NXDN	Audio	-	-	Step1. Balance adjust Step2. Maximum Deviation (NXDN Narrow)	Step1. Balance adjust Step2. Maximum Deviation (NXDN Very Narrow)
	CWID	-	-	-	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow) Step3. CWID Deviation (NXDN Very Narrow)

- Balance is common with all the above deviation adjustments. If Balance (Transmitter Section 3) has already adjusted, please skip Step1 and adjust from Step2.
- Maximum Deviation (Analog Wide 5k/Wide 4k/Narrow) is common with all the analog signaling deviations and CWID Deviation (NXDN Very Narrow). If Balance and Maximum Deviation (Analog Wide 5k/Wide 4k/Narrow) (Transmitter Section 5) have already adjusted, please skip Step2 and adjust from Step3.

ADJUSTMENT

Receiver Section

Item	Condition		Measurement			Adjustment			Specifications / Remarks
	Panel tuning mode	PC test mode	Test-equipment	Unit	Terminal	Unit	Parts	Method	
1. AF level setting	[Panel test mode] 1) CH-Sig: 1-1 SSG output: -47dBm (1mV) (MOD: 1kHz/±1.5kHz) Wide 5k/Wide 4k/ Narrow: Narrow Beat Shift: Uncheck Comander: Uncheck	1) Test Channel Channel: 1 Test Signaling Mode: Analog Signaling: 1 Wide 5k/Wide 4k/ Narrow: Narrow Beat Shift: Uncheck Comander: Uncheck SSG output: -47dBm (1mV) (MOD: 1kHz/±1.5kHz)	SSG DVM AF VTVM Dummy load	Panel	ANT Universal connector	Panel	Volume knob	Turn the Volume knob to obtain 0.63V AF output.	0.63V±0.1V
2. Sensitivity 1 adjust	1) Adj item: [SENS1] Adjust: [***] 2) Adj item: [L SENS1]→ [L' SENS1]→ [C SENS1]→ [H' SENS1] Adjust: [***] Press [<>] key to store the adjustment value.	1) Adj item: [Sensitivity 1] 2) Adj item: [Low], [Low'], [Center], [High'] Press [Apply All] button to store the adjustment value.	SSG AF VTVM Oscilloscope	Panel	ANT Universal connector	Panel	[Panel tuning mode] [↔], [↙] [PC test mode] [◀,▶]	Write the value as followings [L SENS1] / [Low] : 100 [L' SENS1] / [Low'] : 115 [C SENS1] / [Center] : 128 [H' SENS1] / [High'] : 142	
	3) Adj item: [H SENS1] Adjust: [***]	3) Adj item: [High]						Increase the adjustment value from 1 to get 12dB SINAD.	
	Caution: Perform the step 3 adjustments of "3. Sensitivity 2 adjust" before performing the [H SENS1] adjustment.							Note: If the SINAD value is less than 12dB SINAD, conduct the following. At first, apply "104" as the temporary value for "Sensitivity 1 [High]". Next, decrease "Sensitivity 2 [High]" from "256" until the SINAD value becomes 13dB SINAD, then apply the adjustment value. (Keep this "Sensitivity 2 [High]" adjustment value and no need to restore the adjustment value to "256".) Finally, increase "Sensitivity 1 [High]" adjustment value from 1 to get 12dB SINAD.	
	SSG output: -118dBm (0.28μV) (MOD: 1kHz/±1.5kHz) Press [<>] key to store the adjustment value.	SSG output: -118dBm (0.28μV) (MOD: 1kHz/±1.5kHz) Press [Apply All] button to store the adjustment value.

Sensitivity 2 adjust	1) Adj item: [SENS2] Adjust: [***] 2) Adj item: [L SENS2]→ [L' SENS2]→ [C SENS2]→ [H' SENS2] Adjust: [***] SSG output: -118dBm (0.28μV) (MOD: 1kHz/±1.5kHz) Press [<>] key to store the adjust- ment value.	1) Adj item: [Sensitivity 2] 2) Adj item: [Low], [Low'], [Center], [High'] SSG output: -118dBm (0.28μV) (MOD: 1kHz/±1.5kHz) Press [Apply All] button to store the adjustment value.	SSG AF VTVM Oscilloscope	Panel	ANT Universal connector	Panel	[Panel tuning mode] [↖, ↘] [PC test mode] [◀, ▶]	Decrease the adjustment value from 256 to get 12dB SINAD.	
	3) Adj item: [H SENS2] Adjust: [***] Press [<] key to store the adjust- ment value.	3) Adj item: [High] Press [Apply All] button to store the adjustment value.					Write the value as followings. [H SENS2]/[High] : 256		
4. RSSI reference adjust *5 [Analog Narrow]	1) Adj item: [An RRSSI] Adjust: [***] 2) Adj item: [AnL RRSSI]→ [AnL' RRSSI]→ [AnC RRSSI]→ [AnH' RRSSI]→ [AnH RRSSI] Adjust: [***] SSG output: 12dB SINAD level -3dB (MOD: 1kHz/±1.5kHz)	1) Adj item: [RSSI Reference (Analog Narrow)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: 12dB SINAD level -3dB (MOD: 1kHz/±1.5kHz)	SSG Distortion meter Oscilloscope				[Panel tuning mode] After input signal from SSG, press [<] key to store the adjustment value.		
	[Analog Wide 4k]	1) Adj item: [As RRSSI] Adjust: [***] 2) Adj item: [AsL RRSSI]→ [AsL' RRSSI]→ [AsC RRSSI]→ [AsH' RRSSI]→ [AsH RRSSI] Adjust: [***] SSG output: 12dB SINAD level -3dB (MOD: 1kHz/±2.4kHz)					[PC test mode] After input signal from SSG, press [Apply] button to store the adjust- ment value.		
		1) Adj item: [RSSI Reference (Analog Wide 4k)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: 12dB SINAD level -3dB (MOD: 1kHz/±2.4kHz)							
[Analog Wide 5k]	1) Adj item: [Aw RRSSI] Adjust: [***] 2) Adj item: [AwL RRSSI]→ [AwL' RRSSI]→ [AwC RRSSI]→ [AwH' RRSSI]→ [AwH RRSSI] Adjust: [***] SSG output: 12dB SINAD level -3dB (MOD: 1kHz/±3kHz)	1) Adj item: [RSSI Reference (Analog Wide 5k)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: 12dB SINAD level -3dB (MOD: 1kHz/±3kHz)							

ADJUSTMENT

Item	Condition		Measurement			Adjustment			Specifications / Remarks
	Panel tuning mode	PC test mode	Test-equipment	Unit	Terminal	Unit	Parts	Method	
RSSI reference adjust *5 [NXDN Very Narrow]	1) Adj item: [Nv RSSI] Adjust: [***] 2) Adj item: [NvL RSSI]→ [NvL' RSSI]→ [NvC RSSI]→ [NvH' RSSI]→ [NvH RSSI] Adjust: [***] SSG output: 12dB SINAD level for Analog Narrow -3dB (MOD: 1kHz/±1.5kHz)	1) Adj item: [RSSI Reference (NXDN Very Narrow)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: 12dB SINAD level for Analog Narrow -3dB (MOD: 1kHz/±1.5kHz)	SSG Distortion meter Oscilloscope	Panel	ANT Universal connector			[Panel tuning mode] After input signal from SSG, press [<>] key to store the adjustment value. [PC test mode] After input signal from SSG, press [Apply] button to store the adjustment value.	Adjust with the analog signal.
*5: Because RSSI reference (NXDN Narrow) is adjusted by adjusting RSSI reference (Analog Narrow), it is not necessary to adjust RSSI reference (NXDN Narrow).									
5. Open Squelch adjust *6 (Squelch level 5 adjust) [Analog Narrow]	1) Adj item: [An SQL] Adjust: [***] 2) Adj item: [AnL SQL]→ [AnL' SQL]→ [AnC SQL]→ [AnH' SQL]→ [AnH SQL] Adjust: [***] SSG output: 12dB SINAD level (MOD: 1kHz/±1.5kHz)	1) Adj item: [Open Squelch (Analog Narrow)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: 12dB SINAD level (MOD: 1kHz/±1.5kHz)	SSG Distortion meter Oscilloscope	Panel	ANT Universal connector			[Panel tuning mode] After input signal from SSG, press [<>] key to store the adjustment value. [PC test mode] After input signal from SSG, press [Apply] button to store the adjustment value.	"Open Squelch" will not be adjusted correctly if MOD and Deviation are wrong.
[Analog Wide 4k]	1) Adj item: [As SQL] Adjust: [***] 2) Adj item: [AsL SQL]→ [AsL' SQL]→ [AsC SQL]→ [AsH' SQL]→ [AsH SQL] Adjust: [***] SSG output: 12dB SINAD level (MOD: 1kHz/±2.4kHz)	1) Adj item: [Open Squelch (Analog Wide 4k)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: 12dB SINAD level (MOD: 1kHz/±2.4kHz)							
[Analog Wide 5k]	1) Adj item: [Aw SQL] Adjust: [***] 2) Adj item: [AwL SQL]→ [AwL' SQL]→ [AwC SQL]→ [AwH' SQL]→ [AwH SQL] Adjust: [***] SSG output: 12dB SINAD level (MOD: 1kHz/±3kHz)	1) Adj item: [Open Squelch (Analog Wide 5k)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: 12dB SINAD level (MOD: 1kHz/±3kHz)							

ADJUSTMENT

Item	Condition		Measurement			Adjustment			Specifications / Remarks
	Panel tuning mode	PC test mode	Test-equipment	Unit	Terminal	Unit	Parts	Method	
Open Squelch adjust *6 [Squelch level 5 adjust] [NXDN Very Narrow]	1) Adj item: [Nv SQL] Adjust: [***] 2) Adj item: [NvL SQL]→ [NvL' SQL]→ [NvC SQL]→ [NvH SQL] Adjust: [***] SSG output: 12dB SINAD level for Analog Narrow -4dB (MOD: 400Hz/±1.1kHz)	1) Adj item: [Open Squelch (NXDN Very Narrow)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: 12dB SINAD level for Analog Narrow -4dB (MOD: 400Hz/±1.1kHz)	SSG Distortion meter Oscilloscope	Panel	ANT Universal connector			[Panel tuning mode] After input signal from SSG, press [<>] key to store the adjustment value. [PC test mode] After input signal from SSG, press [Apply] button to store the adjustment value.	Adjust with the analog signal. This item is adjusted under the condition that MOD is "400Hz" and Deviation is "±1.1kHz" due to the circuit configuration.
*6: Because Open Squelch (NXDN Narrow) is adjusted by adjusting Open Squelch (Analog Narrow), it is not necessary to adjust Open Squelch (NXDN Narrow).									
6. Low RSSI at -118dBm adjust *7 [Analog Narrow] [Analog Wide 4k] [Analog Wide 5k]	1) Adj item: [An LRSSI] Adjust: [***] 2) Adj item: [AnL LRSSI]→ [AnL' LRSSI]→ [AnC LRSSI]→ [AnH' LRSSI]→ [AnH LRSSI] Adjust: [***] SSG output: -118dBm (0.28μV) (MOD: 1kHz/±1.5kHz)	1) Adj item: [Low RSSI (Analog Narrow)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: -118dBm (0.28μV) (MOD: 1kHz/±1.5kHz)	SSG	Panel	ANT Universal connector			[Panel tuning mode] After input signal from SSG, press [<>] key to store the adjustment value. [PC test mode] After input signal from SSG, press [Apply] button to store the adjustment value.	
	1) Adj item: [As LRSSI] Adjust: [***] 2) Adj item: [AsL LRSSI]→ [AsL' LRSSI]→ [AsC LRSSI]→ [AsH' LRSSI]→ [AsH LRSSI] Adjust: [***] SSG output: -118dBm (0.28μV) (MOD: 1kHz/±2.4kHz)	1) Adj item: [Low RSSI (Analog Wide 4k)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: -118dBm (0.28μV) (MOD: 1kHz/±2.4kHz)							
	1) Adj item: [Aw LRSSI] Adjust: [***] 2) Adj item: [AwL LRSSI]→ [AwL' LRSSI]→ [AwC LRSSI]→ [AwH' LRSSI]→ [AwH LRSSI] Adjust: [***] SSG output: -118dBm (0.28μV) (MOD: 1kHz/±3kHz)	1) Adj item: [Low RSSI (Analog Wide 5k)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: -118dBm (0.28μV) (MOD: 1kHz/±3kHz)							

ADJUSTMENT

Item	Condition		Measurement			Adjustment			Specifications / Remarks
	Panel tuning mode	PC test mode	Test-equipment	Unit	Terminal	Unit	Parts	Method	
Low RSSI at -118dBm adjust *7 [NXDN Very Narrow]	1) Adj item: [Nv LRSSI] Adjust: [***] 2) Adj item: [NvL LRSSI]→ [NvL' LRSSI]→ [NvC LRSSI]→ [NvH' LRSSI]→ [NvH LRSSI] Adjust: [***] SSG output: -118dBm (0.28μV) (MOD: 1kHz/±1.5kHz)	1) Adj item: [Low RSSI (NXDN Very Narrow)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: -118dBm (0.28μV) (MOD: 1kHz/±1.5kHz)	SSG	Panel	ANT Universal connector			[Panel tuning mode] After input signal from SSG, press [<key>] key to store the adjustment value. [PC test mode] After input signal from SSG, press [Apply] button to store the adjustment value.</key>	Adjust with the analog signal.
*7: Because Low RSSI at -118dBm (NXDN Narrow) is adjusted by adjusting Low RSSI at -118dBm (Analog Narrow), it is not necessary to adjust Low RSSI at -118dBm (NXDN Narrow).									
7. High RSSI at -80dBm adjust *8 [Analog Narrow]	1) Adj item: [An HRSSI] Adjust: [***] 2) Adj item: [AnL HRSSI]→ [AnL' HRSSI]→ [AnC HRSSI]→ [AnH' HRSSI]→ [AnH HRSSI] Adjust: [***] SSG output: -80dBm (22.4μV) (MOD: 1kHz/±1.5kHz)	1) Adj item: [High RSSI (Analog Narrow)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: -80dBm (22.4μV) (MOD: 1kHz/±1.5kHz)	SSG	Panel	ANT Universal connector			[Panel tuning mode] After input signal from SSG, press [<key>] key to store the adjustment value. [PC test mode] After input signal from SSG, press [Apply] button to store the adjustment value.</key>	
[Analog Wide 4k]	1) Adj item: [As HRSSI] Adjust: [***] 2) Adj item: [AsL HRSSI]→ [AsL' HRSSI]→ [AsC HRSSI]→ [AsH' HRSSI]→ [AsH HRSSI] Adjust: [***] SSG output: -80dBm (22.4μV) (MOD: 1kHz/±2.4kHz)	1) Adj item: [High RSSI (Analog Wide 4k)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: -80dBm (22.4μV) (MOD: 1kHz/±2.4kHz)							
[Analog Wide 5k]	1) Adj item: [Aw HRSSI] Adjust: [***] 2) Adj item: [AwL HRSSI]→ [AwL' HRSSI]→ [AwC HRSSI]→ [AwH' HRSSI]→ [AwH HRSSI] Adjust: [***] SSG output: -80dBm (22.4μV) (MOD: 1kHz/±3kHz)	1) Adj item: [High RSSI (Analog Wide 5k)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: -80dBm (22.4μV) (MOD: 1kHz/±3kHz)							

ADJUSTMENT

Item	Condition		Measurement			Adjustment			Specifications / Remarks
	Panel tuning mode	PC test mode	Test-equipment	Unit	Terminal	Unit	Parts	Method	
High RSSI at -80dBm adjust *8 [NXDN Very Narrow]	1) Adj item: [Nv HRSSI] Adjust: [***] 2) Adj item: [NvL HRSSI]→ [NvL' HRSSI]→ [NvC HRSSI]→ [NvH' HRSSI]→ [NvH HRSSI] Adjust: [***] SSG output: -80dBm (22.4μV) (MOD: 1kHz/±1.5kHz)	1) Adj item: [High RSSI (NXDN Very Narrow)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: -80dBm (22.4μV) (MOD: 1kHz/±1.5kHz)	SSG	Panel	ANT Universal connector			[Panel tuning mode] After input signal from SSG, press [<>] key to store the adjustment value. [PC test mode] After input signal from SSG, press [Apply] button to store the adjustment value.	Adjust with the analog signal.
*8: Because High RSSI at -80dBm (NXDN Narrow) is adjusted by adjusting High RSSI at -80dBm (Analog Narrow), it is not necessary to adjust High RSSI at -80dBm (NXDN Narrow).									
8. Tight Squelch adjust (Squelch level 9 adjust) [Analog Narrow]	1) Adj item: [An SQLT] Adjust: [***] 2) Adj item: [AnL SQLT]→ [AnL' SQLT]→ [AnC SQLT]→ [AnH' SQLT]→ [AnH SQLT] Adjust: [***] SSG output: 12dB SINAD level +5dB (MOD: 1kHz/±1.5kHz)	1) Adj item: [Tight Squelch (Analog Narrow)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: 12dB SINAD level +5dB (MOD: 1kHz/±1.5kHz)	SSG	Panel	ANT Universal connector			[Panel tuning mode] After input signal from SSG, press [<>] key to store the adjustment value. [PC test mode] After input signal from SSG, press [Apply] button to store the adjustment value.	
[Analog Wide 4k]	1) Adj item: [As SQLT] Adjust: [***] 2) Adj item: [AsL SQLT]→ [AsL' SQLT]→ [AsC SQLT]→ [AsH' SQLT]→ [AsH SQLT] Adjust: [***] SSG output: 12dB SINAD level +5dB (MOD: 1kHz/±2.4kHz)	1) Adj item: [Tight Squelch (Analog Wide 4k)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: 12dB SINAD level +5dB (MOD: 1kHz/±2.4kHz)							
[Analog Wide 5k]	1) Adj item: [Aw SQLT] Adjust: [***] 2) Adj item: [AwL SQLT]→ [AwL' SQLT]→ [AwC SQLT]→ [AwH' SQLT]→ [AwH SQLT] Adjust: [***] SSG output: 12dB SINAD level +5dB (MOD: 1kHz/±3kHz)	1) Adj item: [Tight Squelch (Analog Wide 5k)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: 12dB SINAD level +5dB (MOD: 1kHz/±3kHz)							

TERMINAL FUNCTION

Control unit (X53-4262-XX)

Pin No.	Name	I/O	Function
CN1			
1	/CS	O	Chip select output
2	/RES	O	LCD reset output
3	A0	O	Address bus 0 output
4	/WR	O	WR bus output
5	D0	I/O	Data bus 0

LEVEL DIAGRAM

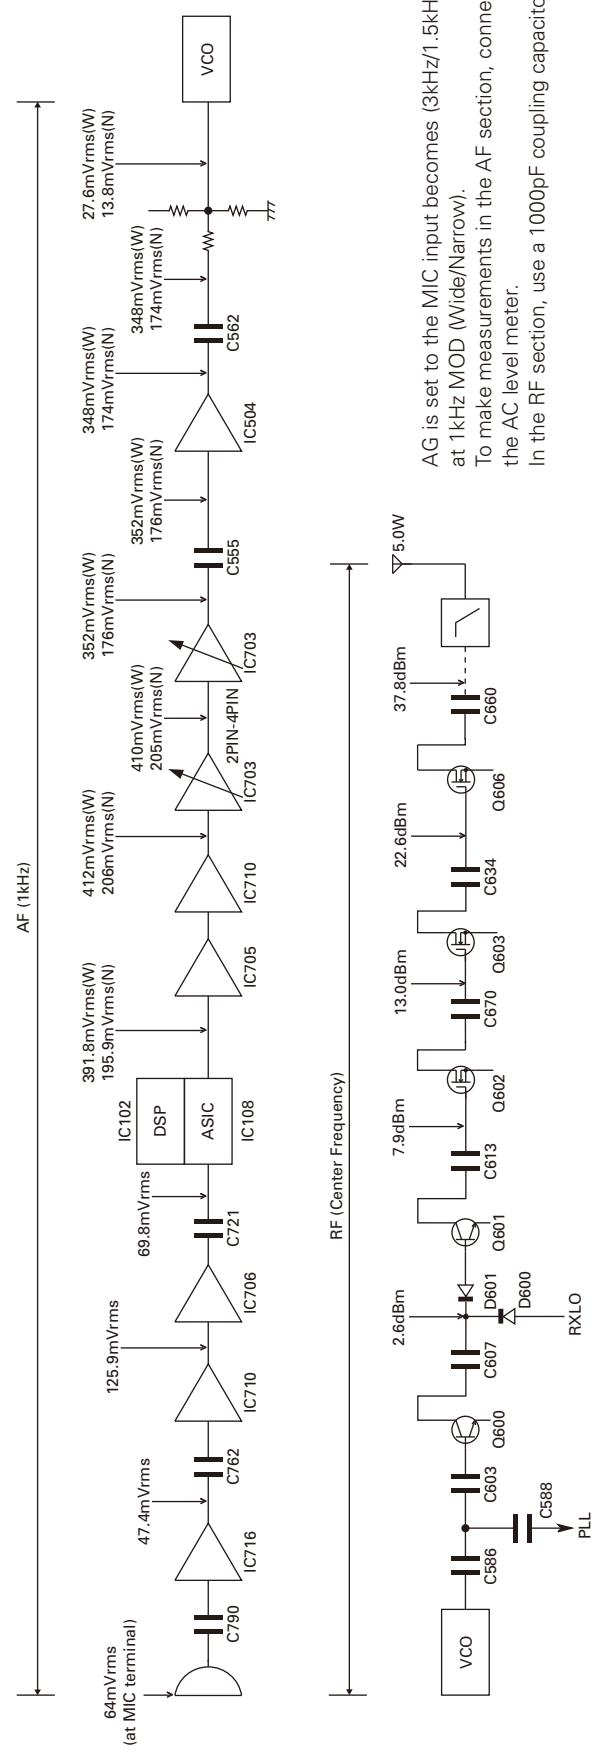

Receiver Section

To make measurements in the AF section, connect the AC level meter (ANT input: -53dB, 1kHz FM, 3kHz DDEV (Wide)) In the RF section, use a 1000pF coupling capacitor. (The display shows the SSG input value required to obtain 12dB SINAD without local level.)

SPECIFICATIONS

GENERAL

Models.....	E4: Basic Model	E: w/12-key Model
Frequency Range.....	400~470 MHz	
Number of Channels.....	512	
Zones.....	128	
Max. Channels per Zone.....	250	
Channel Spacing.....	Analogue: 12.5/20/25 kHz	Digital: 6.25/12.5 kHz
Operating Voltage.....	7.5V DC ± 20%	
Battery Life (with KNB-48L).....	5-5-90 duty cycle: More than 12.5 hours 10-10-80 duty cycle: More than 8.5 hours	
Operating Temperature Range	-30°C to +60°C	
Frequency Stability	±1.0ppm	
Antenna Impedance	50Ω	
Dimensions (W x H x D) (Projections not included)		
Radio only.....	58 x 127.5 x 41.3 mm	
with KNB-47L	58 x 127.5 x 41.3 mm	
with KNB-48L	58 x 127.5 x 48.5 mm	
Weight (net)		
Radio only.....	250 g	
with KNB-47L	375 g	
with KNB-48L	405 g	

RECEIVER

Sensitivity (Analogue)			
EIA 12dB SINAD.....	25kHz: 0.28µV	20kHz: 0.28µV	12.5kHz: 0.32µV
EN 20dB SINAD	25kHz: -3dBµV	20kHz: -3dBµV	12.5kHz: -1dBµV
Sensitivity (Digital)			
3% BER.....	12.5kHz: 0.32µV	6.25kHz: 0.25µV	
1% BER.....	12.5kHz: -1dBµV	6.25kHz: -4dBµV	
Adjacent Channel Selectivity (Analogue)	25kHz: 76dB	20kHz: 74dB	12.5kHz: 68dB
Intermodulation (Analogue)	65dB		
Spurious Response Rejection (Analogue).....	75dB		
Audio Distortion.....	Less than 3%		
Audio Output	500mW/8Ω		

TRANSMITTER

RF Power Output High/Low.....	5W/1W		
Modulation Limiting (Analogue).....	±5.0kHz at 25kHz	±4.0kHz at 20kHz	±2.5kHz at 12.5kHz
Spurious Emission	-36dBm < 1GHz, -30dBm > 1GHz		
FM Noise (EIA) (Analogue)	25kHz: 45dB	20kHz: 45dB	12.5kHz: 40dB
Modulation Distortion	Less than 3%		
Microphone Impedance.....	1.8kΩ		
Modulation.....	16K0F3E, 14K0F3E, 14K0F2D, 12K0F2D, 8K50F3E, 7K50F2D, 8K30F1E, 8K30F1D, 8K30F7W, 4K00F1E, 4K00F1D, 4K00F7W, 4K00F2D		

Analogue measurements made per EN standards or TIA/EIA 603 and specifications shown are typical
