**Firmware Copyrights**

The title to and ownership of copyrights for firmware embedded in KENWOOD product memories are reserved for JVC KENWOOD Corporation. Any modifying, reverse engineering, copy, reproducing or disclosing on an Internet website of the firmware is strictly prohibited without prior written consent of JVC KENWOOD Corporation. Furthermore, any reselling, assigning or transferring of the firmware is also strictly prohibited without embedding the firmware in KENWOOD product memories.

Transceivers containing AMBE+2™ Vocoder:

The AMBE+2™ voice coding technology is embedded in the firmware under the license of Digital Voice Systems, Inc.

# GENERAL

## INTRODUCTION

### SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions. These are issued as required.

## ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts : components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

## PERSONAL SAFETY

The following precautions are recommended for personal safety:

- DO NOT transmit until all RF connectors are verified secure and any open connectors are properly terminated.
- SHUT OFF and DO NOT operate this equipment near electrical blasting caps or in an explosive atmosphere.
- This equipment should be serviced by a qualified technician only.

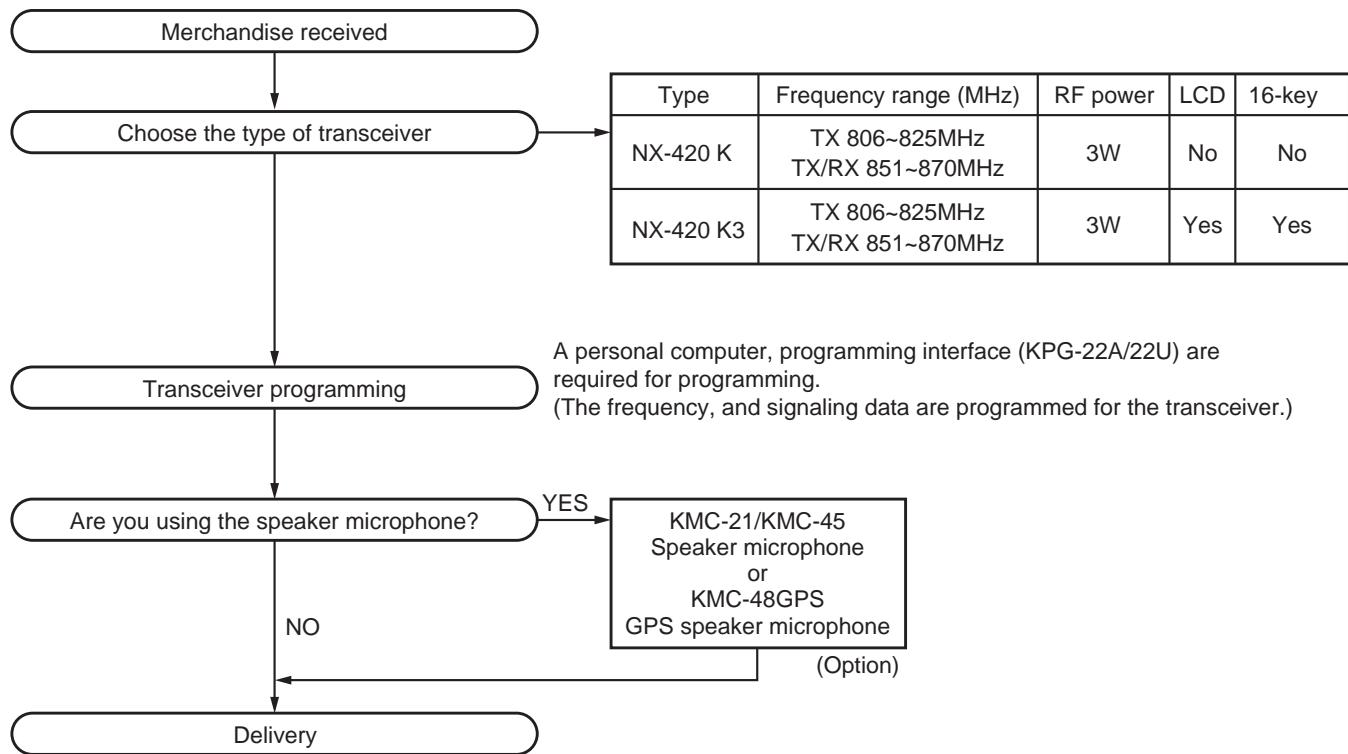

## SERVICE

This transceiver is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained within.

## SYSTEM SET-UP

# REALIGNMENT

## 1. Modes

Mode	Function
User mode	For normal use.
Panel test mode * 1	Used by the dealer to check the fundamental characteristics.
Panel tuning mode * 1	Used by the dealer to tune the transceiver.
PC mode	Used for communication between the transceiver and PC.
Data programming mode	Used to read and write frequency data and other features to and from the transceiver.
PC test mode	Used to check the transceiver using the PC. This feature is included in the FPU.
Firmware programming mode	Used when changing the main program of the flash memory.
Clone mode * 1	Used to transfer programming data from one transceiver to another.
Firmware version information * 1	Used to confirm the internal firmware version.

\* 1: K3 model only

## 2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
Panel test mode * 2	[ <b>A</b> ] + Power ON
PC mode	Received commands from PC
Panel tuning mode * 2	[Panel test mode] + [ <b>S</b> ]
Firmware programming mode	[Side1] + Power ON
Clone mode * 2	[< <b>B</b> >] + Power ON
Firmware version information * 2	[ <b>S</b> ] + Power ON

\* 2: K3 model only

## 3. Panel Test Mode (K3 model only)

Setting method refer to ADJUSTMENT.

## 4. Panel Tuning Mode (K3 model only)

Setting method refer to ADJUSTMENT.

## 5. PC Mode

### 5-1. Preface

The transceiver is programmed by using a personal computer, programming interface (KPG-22A/22U) and programming software (KPG-141D).

The programming software can be used with a PC. Figure 1 shows the setup of a PC for programming.

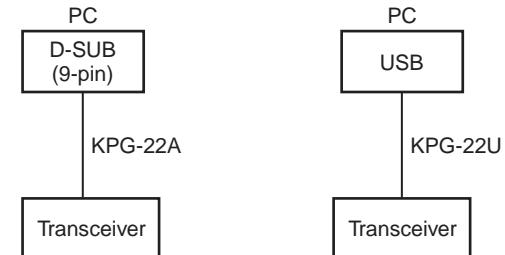

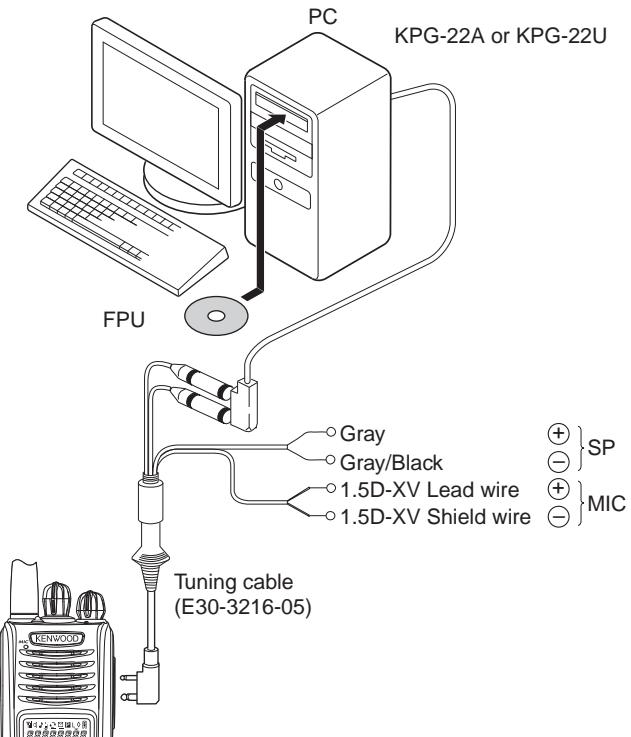

Fig. 1

### 5-2. Connection procedure

1. Connect the transceiver to the computer using the interface cable.

#### Note:

- You must install the KPG-22U driver in the computer to use the USB programming interface cable (KPG-22U).

# REALIGNMENT

2. When the POWER is switched on, you can immediately enter user mode. When the PC sends a command, the transceiver enters PC mode, and "PROGRAM" is displayed on the LCD.

When data is transmitting from the transceiver, the red LED lights.

When data is receiving by the transceiver, the green LED lights.

#### **Note:**

The data stored in the computer must match the "Model Name" when it is written into the flash memory.

#### **5-3. KPG-22A description**

(PC programming interface cable: Option)

The KPG-22A is required to interface the transceiver to the computer. It has a circuit in its D-sub connector case that converts the RS-232C logic level to the TTL level.

The KPG-22A connects the SP/MIC connector of the transceiver to the RS-232C serial port of the computer.

#### **5-4. KPG-22U description**

(USB programming interface cable: Option)

The KPG-22U is a cable which connects to a USB port on a computer.

When using the KPG-22U, install the supplied CD-ROM (with driver software) in the computer. The KPG-22U driver runs under Windows XP, Vista or 7.

The latest version of the USB driver is available for download from the following URL:

<http://www.kenwood.com/usb-com/>

(This URL may change without notice.)

#### **5-5. Programming softwares KPG-141D (ver.3.10 or later) description**

The KPG-141D is the programming software for the transceiver supplied on a CD-ROM. This software runs under Windows XP, Vista or 7 on a PC.

The data can be input to or read from the transceiver and edited on the screen. The programmed or edited data can be printed out. It is also possible to tune the transceiver.

## 6. Firmware Programming Mode

#### **6-1. Preface**

Flash memory is mounted on the transceiver. This allows the transceiver to be upgraded when new features are released in the future. (For details on how to obtain the firmware, contact Customer Service.)

#### **6-2. Connection procedure**

Connect the transceiver to the personal computer using the interface cable (KPG-22A/22U) and USB adapter (KCT-53U: when the interface cable is KPG-22A, the KCT-53U can be used.). (Connection is the same as in the PC Mode.)

#### **6-3. Programming**

1. Start up the firmware programming software (Fpro.exe (ver. 6.10 or later)). The Fpro.exe exists in the KPG-141D installed holder.
2. Set the communications speed (normally, 115200 bps) and communications port in the configuration item.
3. Set the firmware to be updated by File name item.
4. Press and hold the [Side1] key while turning the transceiver power ON. Then, the orange LED on the transceiver lights and "FIRM PRG" is displayed.
5. Check the connection between the transceiver and the personal computer, and make sure that the transceiver is in the Program mode.
6. Press "write" button in the window. When the transceiver starts to receive data, the [LOADING] display lights.
7. If writing ends successfully, the checksum is calculated and a result is displayed.
8. If you want to continue programming other transceivers, repeat steps 4 to 7.

#### **6-4. Function**

If you press the [Side1] key while "FIRM PRG" is displayed, the checksum is calculated, and a result is displayed. If you press the [Side1] key again while the checksum is displayed, "FIRM PRG" is redisplayed.

#### **Note:**

- This mode cannot be entered if the Firmware Programming mode is set to Disable in the Programming software.
- Normally, write in the high-speed mode.
- The text message are displayed for K3 model only.

#### **7. Clone Mode (K3 model only)**

Programming data can be transferred from one transceiver to another by connecting them via their external SP/MIC connectors. The operation is as follows (the transmit transceiver is the source and the receive transceiver is a target).

The following data cannot be cloned.

- Tuning data
- Embedded message with password
- Model name data
- ESN (Electronic Serial Number) data

#### **Note:**

The following data can be cloned.

- Fleet (own)/ID (own) for FleetSync
- Unit ID (own) for NXDN
- ID (own) for MDC-1200

1. Press and hold the [**B**] key while turning the transceiver power ON. If the Read authorization password is set to the transceiver, the transceiver displays "CLN LOCK". If the password is not set, the transceiver displays "CLONE".

## REALIGNMENT

2. When you enter the correct password, and "CLONE" is displayed, the transceiver can be used as the cloning source. The following describes how to enter the password.

3.

- **How to enter the password using the keypad (K3 model only);**

If one of keys 0 to 9 is pressed while the "CLN LOCK" is displayed, the pressed number is displayed on the LCD.

Each press of the key shifts the display in order to the left. When you enter the password and press the [**s**] or [**\***] key, "CLONE" is displayed if the entered password is correct. If the password is incorrect, "CLN LOCK" is redisplayed.

- **How to enter the password using the Selector (K3 model only);**

If the Selector is rotated while "CLN LOCK" is displayed, the Read authorization password input screen is displayed.

If the Selector is rotated while the Read authorization password input screen is displayed, the number (0 to 9) blinks on the LCD. When you press the [**s**] key, the currently selected number is determined. If you press the [**s**] key after entering the password in this procedure, "CLONE" is displayed if the entered password is correct. If the password is incorrect, "CLN LOCK" is redisplayed.

4. Power ON the target transceiver.

5. Connect the cloning cable (part No. E30-3410-05) to the SP/MIC connectors on the source and target.

6. Press the [**s**] key on the source while the source displays "CLONE". The data of the source is sent to the target. While the target is receiving the data, "PROGRAM" is displayed. When cloning of data is completed, the source displays "END", and the target automatically operates in the User mode. The target can then be operated by the same program as the source.

7. The other target can be continuously cloned. When the [**s**] key on the source is pressed while the source displays "END", the source displays "CLONE". Carry out the operation in step 4 to 6.

**Note:**

- Cannot be cloned if the password (overwrite password) is programmed to the target.
- "Model Name" must be same to clone the transceiver.

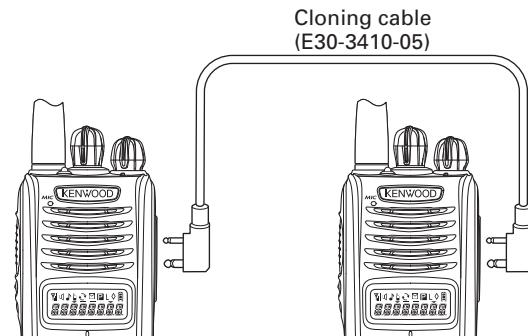

Fig. 2

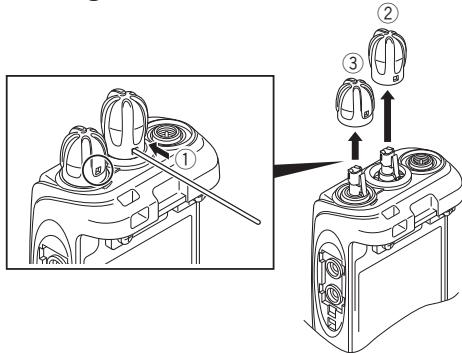

### 8. Firmware Version Information (K3 model only)

Press and hold the [**s**] key while turning the transceiver power ON and then keep pressing and holding the [**s**] key, the firmware version information appears on the LCD.

## DISASSEMBLY FOR REPAIR

## 1. Precautions for Disassembly

- Removing the selector knob and volume knob
1. Using a thin tool, insert it in the hole on the selector knob side and push the knob spring. ①
  - Note:** When you push the knob spring, take care not to damage the resin of the knob.
  2. Lift and remove the selector knob ② while pushing the knob spring.
  3. Repeat steps 1 and 2 for the volume knob, to remove the volume knob ③.

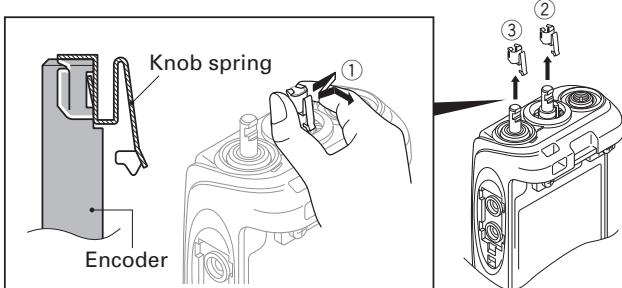

**Note:**

Perform the following procedures when installing the selector knob and volume knob.

- 1) Match the direction for the hole of the knob and the knob spring.
- 2) Push the knob onto the knob spring until a click sounds.

## ■ Removing the selector knob spring and volume knob spring

1. Lightly grasp the left and right sides of the selector knob spring, then shift the knob spring to the left and right, little by little, as shown in the figure. ①
- Note:** Do not grasp the knob spring tightly.
2. Remove the selector knob spring ②.
- Note:** Do not bring your fingers into contact with the flat spring of the knob spring as much as possible.
3. Repeat steps 1 and 2 for the volume knob spring, to remove the volume knob spring ③.

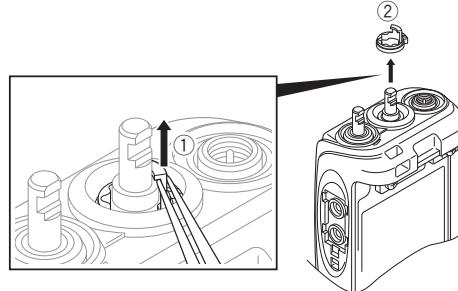

**Note:**

Perform the following procedures when installing the selector knob spring and volume knob spring.

- 1) Match the direction for the knob spring and the encoder.
- 2) Insert the encoder onto the knob spring until a click sounds.

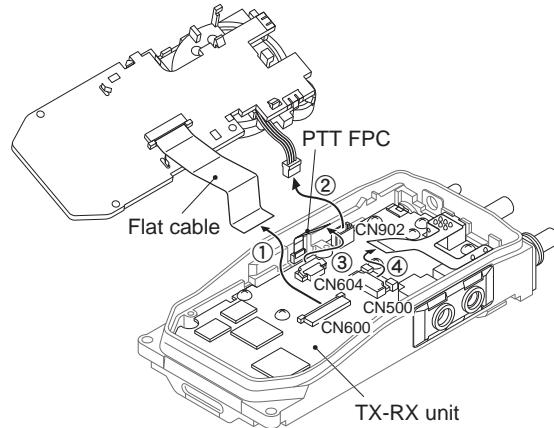

## ■ Removing the mechanical stopper (K3 model only)

1. Pick up and lift the tab of a mechanical stopper using a pair of tweezers. ①
- Note:** Take care not to damage the packing.
2. Remove the mechanical stopper ②.

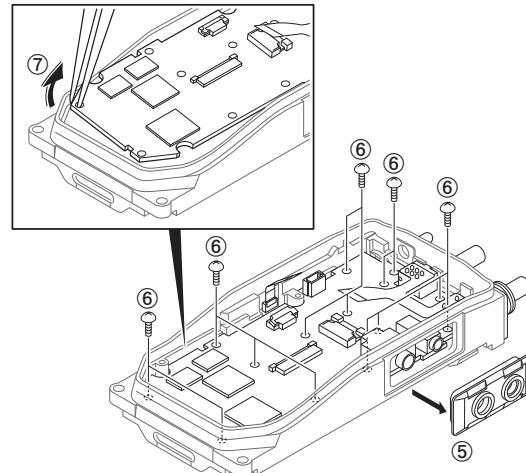

## ■ Removing the TX-RX unit from the chassis

1. Remove the flat cable from the connector (CN600). ①
2. Remove the Speaker lead wire from the connector (CN902). ②
3. Remove the PTT FPC from the connector (CN604). ③
4. Remove the VOL/SEL FPC from the connector (CN500). ④

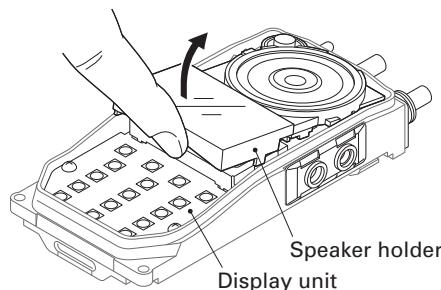

5. Remove the packing ⑤ from the SP/MIC jack.
6. Remove the 14 screws ⑥.
7. Anchor the screw hole of the TX-RX unit using the tip of a pair of tweezers as shown in the figure. Then lift the TX-RX unit to remove it from the chassis. ⑦

# DISASSEMBLY FOR REPAIR

## ■ Removing the speaker holder

There is a space of approximately 1mm (0.04 inch) between the center part of the front glass of the speaker holder and the surface of the Display unit. Set your finger on the space in the center part of the front glass, then lift and remove it.

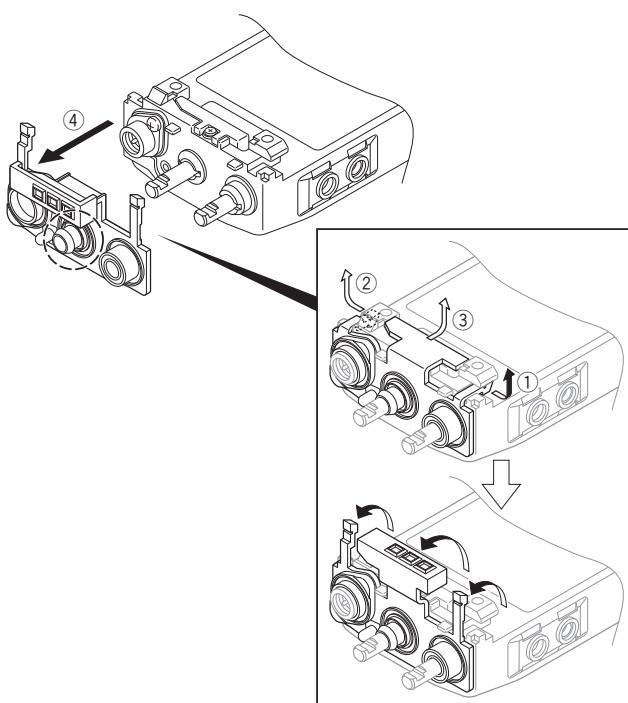

## ■ Removing the TOP packing

1. Pull the TOP packing to the left to remove the packing that is fit into the left groove of the chassis. ①
2. Pull the TOP packing to the right to remove the packing that is fit into the right groove of the chassis. ②
3. Pull the TOP packing to the center to remove the packing that is fit into the center groove of the chassis. ③
4. Remove the TOP packing. ④

### Note:

Remove the packing slowly, as the packing of the selector part might overset when the TOP packing is removed. If the packing is turned over, return it to the normal position using a soft tipped item (e.g., your finger).

## 2. Precautions for Reassembly

### ■ Mounting the chassis onto the case

1. Place the key top on the chassis. Then, fit the chassis tightly into the groove of the key top. ①

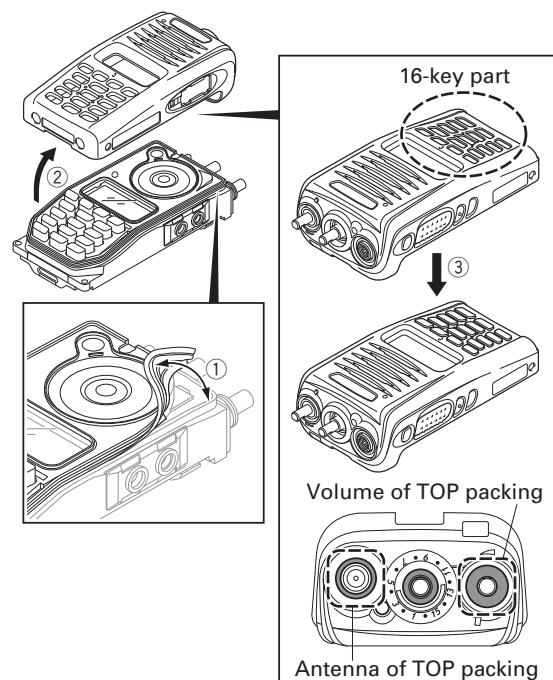

#### Note:

Confirm that the entire groove of the key top fits to the chassis tightly.

2. Mount the chassis onto the case. ②

#### Note:

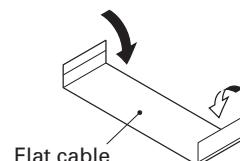

- After mounting the chassis onto the case, if the 16-key part on the key top gets stuck inside the case as shown in the figure, return it to the normal position using a soft tipped item (e.g., your finger). ③
- Prying it with a pointed metal tool such as forceps, may damage the key top or packing.
- Confirm that the TOP packing is not caught in the Antenna or Volume holes of the case.

### ■ Forming the flat cable

Form the right and left end of the flat cable as shown in the figure. (Bend the terminal surface of the flat cable on the inside.)

Note: When bending the flat cable, bend it squarely. There is a possibility of disconnecting when the flat cable is bent too much.

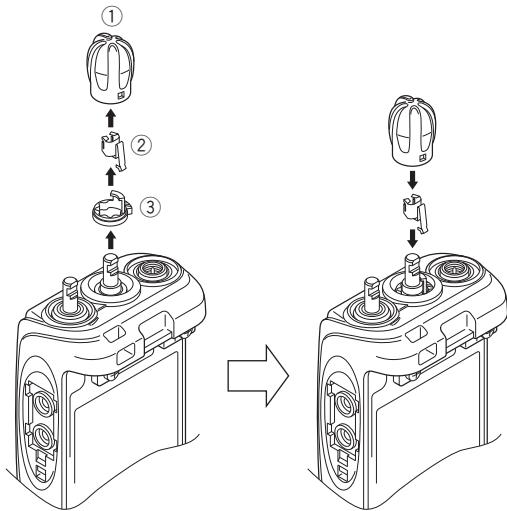

## DISASSEMBLY FOR REPAIR

**■ Changing the channel selector from 16-channel operation to free (without LCD models only)**

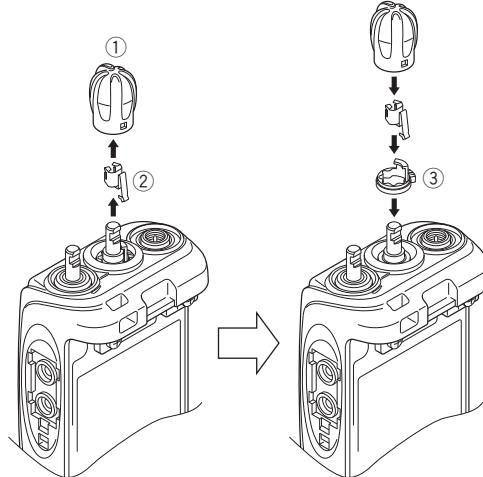

1. Remove the channel selector knob ①. (Refer to page 8 for how to remove the channel selector knob.)
2. Remove the knob spring ②. (Refer to page 8 for how to remove the knob spring.)
3. Remove the mechanical stopper ③. (Refer to page 8 for how to remove the mechanical stopper.)
4. Reassemble the channel selector knob and knob spring that were removed in steps 1 and 2, in their original positions.

**Note:** Refer to page 8 for how to install the channel selector knob and knob spring.

**■ Changing the channel selector from free operation to 16-channel (with LCD models only)**

1. Remove the channel selector knob ①. (Refer to page 8 for how to remove the channel selector knob.)
2. Remove the knob spring ②. (Refer to page 8 for how to remove the knob spring.)
3. Pinch the supplied mechanical stopper ③ using your fingers, then install it into the groove of the selector part on the case.
4. Reassemble the channel selector knob and knob spring that were removed in steps 1 and 2, in their original positions.

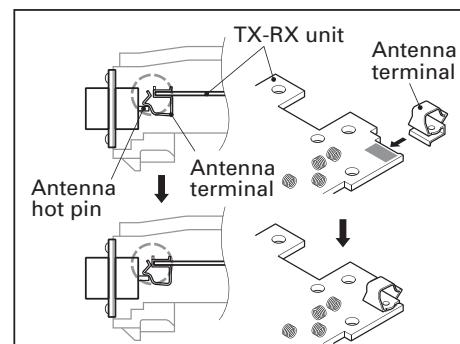

**Note:** Refer to page 8 for how to install the channel selector knob and knob spring.

**■ Connection place of the antenna hot pin and antenna terminal**

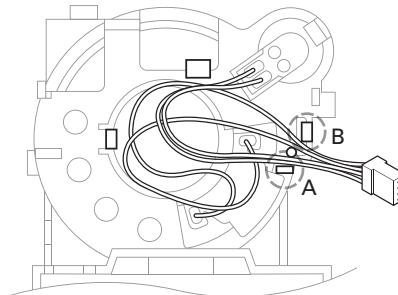

An antenna hot pin is connected with the antenna terminal at the position shown in the figure.

Confirm that the antenna hot pin has firmly come in contact with the terminal when the TX-RX unit is tightened with the screw.

Additionally, refer to the following figures for the connection place of the antenna terminal and the TX-RX unit.

**■ Align the SP/MIC lead wire**

Align the SP/MIC lead wire as shown in the figure. It is possible to fix temporarily by interweaving the two lead wires between the tabs (tab A and tab B) and boss of the speaker holder.

# DISASSEMBLY FOR REPAIR

## ■ Assembly information (Sheet/Cushion)

When "Main Parts" is changed (ordered), "Assembled Sheet/Cushion" should also be changed (ordered) together.

The Sticker and Sheet etc are non-reusable parts. It requires the new one to get the radio's performance after repairs.

For example, when "Plastic Cabinet Assy (A02-4130-13 (without key)/A02-4132-13 (16-key))" is changed, "Sticker (B42-7417-04)" and "Fibrous Sheet (G10-1827-04)" should be ordered and changed together because Sticker (B42-7417-04) and Fibrous Sheet (G10-1827-04) are non-reusable.

Main Parts		Assembled Sheet/ Cushion		
Part Name	Part Number	Part Name	Part Number	Remark
Plastic Cabinet Assy	(without key)	A02-4130-13	Sticker	B42-7417-04 "NEXEDGE" is printed.
	(16-key)	A02-4132-13	Fibrous sheet	G10-1827-04
Speaker	T07-0787-05	Rubber Cushion (SP)	G11-4272-14	
		Sheet (SP)	G11-4527-04	
Chassis	A10-4148-01	Sheet (PTT)	G11-4543-04	
		Rubber Sheet (FET)	G11-4315-14	Used for stabilizing the radiation performance of the FET.
		Sheet (Air)	G11-4500-04	This sheet is put on the air vent hole. This sheet lets air through, but does not let water through.
MIC Element	T91-0673-05	Sheet (ECM)	G11-4558-04	

## CIRCUIT DESCRIPTION

### 1. Overview

The NX-420 is a 800MHz portable transceiver designed to operate in the frequency range of 806 to 870MHz. The unit consists of a receiver, transmitter, phase-locked loop (PLL) frequency synthesizer, baseband parts, power supply, and control circuits.

### 2. Frequency Configuration

The receiver is a double-conversion superheterodyne using the first intermediate frequency (IF) of 49.95MHz and the second IF of 450kHz. Incoming signals from the antenna are mixed with the local signal from the PLL circuit to produce the first IF of 49.95MHz. This is then mixed with the 50.4MHz second local oscillator output to produce the 450kHz second IF. The transmit signal frequency is generated by the PLL VCO, and modulated by the signal from the DSP. It is then amplified and fed to the antenna.

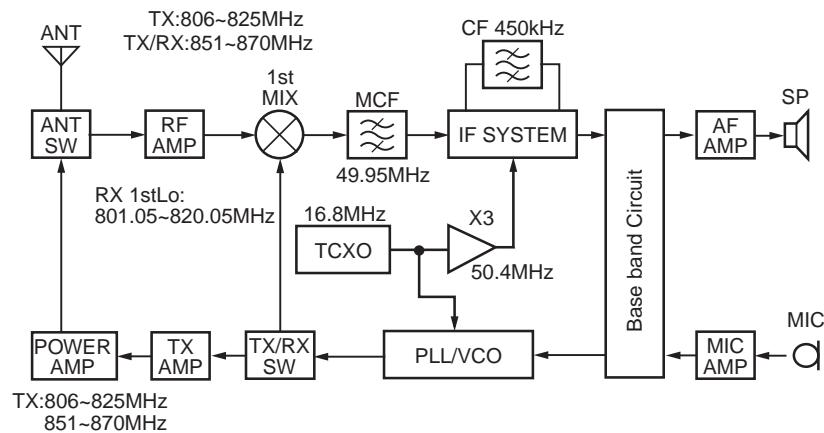

Fig. 1 Frequency configuration

### 3. Receiver System

#### 3-1. RF circuit

An incoming RF signal from the antenna terminal is passed through the antenna switch (D102, D103, D104 and D105) and then the band-pass filter (L217). The signal is amplified by an RF amplifier (Q200), and passed through the

band-pass filter (L212). The resulting signal is applied to the first mixer (IC200), where it is mixed with the first local oscillator signal output from the frequency synthesizer to produce the first IF (49.95MHz).

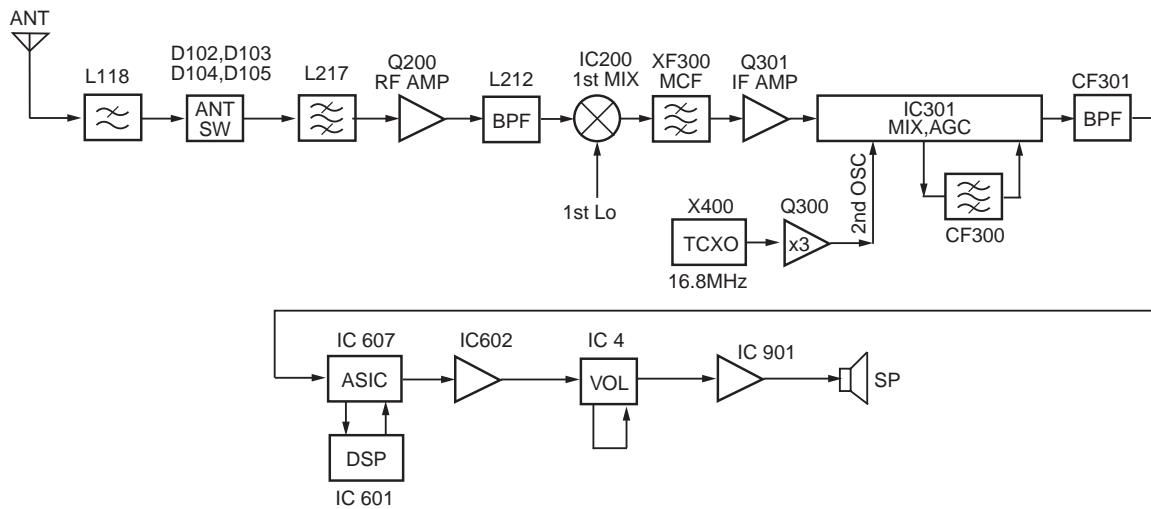

Fig. 2 RF and IF circuit

# CIRCUIT DESCRIPTION

## 3-2. IF circuit

The first IF signal is passed through a four-pole monolithic crystal filter (XF300) to reject adjacent channel signals. The filtered first IF signal is amplified by the first IF amplifier (Q301) and then applied to the IF system IC (IC301). The IF system IC provides a second mixer, AGC amplifier, and RSSI (Received Signal Strength Indicator).

The second mixer mixes the first IF signal with the 50.4MHz of the second local oscillator output and produces the second IF signal of 450kHz.

The second IF signal is passed through the ceramic filter (CF300) to reject the adjacent channel signal. The filtered second IF signal is amplified by the AGC amplifier in IC301.

The signal from the AGC amplifier is input to the ASIC (IC607) through the ceramic filter (CF301).

## 3-3. Audio amplifier circuit

Audio processing (high-pass filter, low-pass filter, de-emphasized and so on) at FM mode and decoding at NXDN mode are processed by the DSP. The audio signal from IC607 and IC601 goes through the amplifier (IC602). The signal then goes through an electronic volume control (IC4), and AF amplifier (IC901).

While AFSW is High, the power supply of audio power amplifier (IC901) is activated, and the output to the speaker turns ON.

## 3-4. Squelch circuit

It amplifies the demodulated noise signal from IC607 after filtering through the LPF and HPF circuit. The amplified signal is then converted to a DC signal by the detection circuit. The converted signal is fed back to IC607.

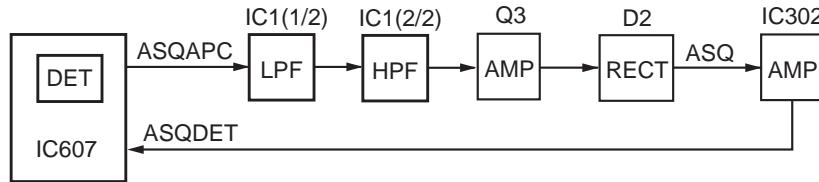

Fig. 3 Squelch circuit

## 4. Transmitter System

### 4-1. Audio band circuit

The signal from the microphone is amplified by IC2(2/2) and limited by the AGC circuit which is composed of D3, D4, Q4 and Q5. IC2 works as an anti-aliasing LPF filter.

### 4-2. Baseband circuit

The audio signal output from the baseband circuit is converted to digital data with a sampling frequency of 48kHz. This digital data is sent to the DSP (IC601), and voice signals of 300Hz or lower and frequencies of 3kHz or higher

are cut off and the audio range of 300Hz to 3kHz is extracted. The audio signal is then pre-emphasized in FM mode and synthesized with the signals, such as QT and DQT, as required, and is then output from IC607. In Digital mode, the audio signal is converted to the 4-Level FSK baseband signal and output from IC607. The DTMF and MSK baseband signals are also generated by the DSP and output by IC607

The LPF (IC6) works as a smoothing filter. The level output according to the transmit carrier is fine-adjusted according to each modulation method.

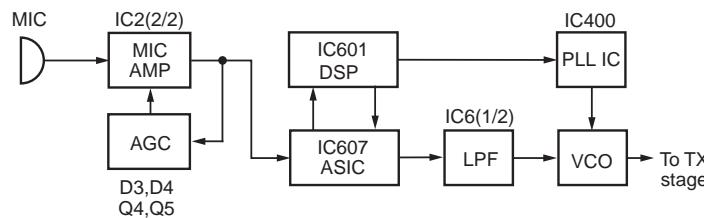

Fig. 4 Audio band and Baseband circuit

# CIRCUIT DESCRIPTION

## 4-3. VOX

The DSP detects the audio level. If the detected level becomes higher than the threshold level, the VOX starts.

## 4-4. Drive and Final amplifier

The signal from the T/R switch (D412 is on) is amplified by the pre-drive amplifier (Q102) to 9~10dBm. The output of the pre-drive amplifier is amplified by the drive and final amplifiers (Q104, Q106) to 3.0W (1.0W when the power is low). Q104 and Q106 are MOS FETs. The output of the final amplifier is then passed through the harmonic filter (LPF) and antenna switch (D102, D103 are on) and applied to the antenna terminal.

## 4-5. APC circuit

The APC circuit always monitors the current flowing through the RF power amplifier (Q106) and keeps a constant current. The voltage drop at R132 and R133 is caused by the current flowing through the RF power amplifier and this voltage is applied to the differential amplifier (IC100 1/2). IC100(2/2) compares the output voltage of IC100(1/2) with the reference voltage from IC607, and the output of IC100(2/2) controls the VGG of Q104 and Q100 to make the both current constant. The change of power high/low is carried out by the change of the reference voltage. IC106, Q107, Q108 and Q109 are turned on and Q103 and Q105 are turned off during transmission and the APC circuit is active.

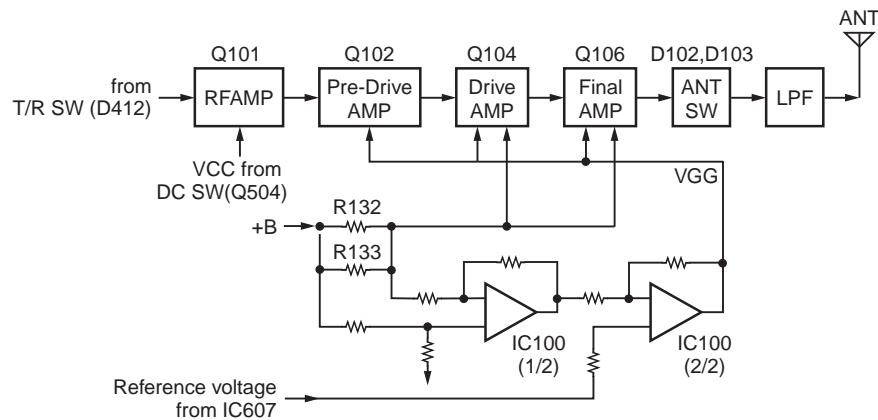

Fig. 5 Drive and final amplifier and APC circuit

## 5. PLL Frequency Synthesizer

### 5-1. TCXO (X400)

TCXO (X400) generates a reference frequency of 16.8MHz for the PLL frequency synthesizer. This reference frequency is applied to pin 9 of the PLL IC (IC400) and is connected to the IF circuit as a 2nd osc through the Tripler (Q300). The frequency adjustment is achieved by switching the ratio of dividing frequency. The resolution of the adjusting frequency is approximately 4Hz.

### 5-2. VCO

There are two VCOs (VCO-1 and VCO-2).

VCO-1 (Q401) generates the 1st local signal for the receiver and a carrier for the transmitter.

VCO-2 (Q402) generates a carrier for the transmitter of TA (Talk Around).

The oscillation frequency of the VCO is half of the carrier or 1st local signal. The VCO oscillates from 403 to 435MHz during transmit, and from 400.525 to 410.025MHz during reception.

The VCO oscillation frequency is determined by one system of operation switching terminal "/T\_R" and two systems

of voltage control terminals "CV" and "ASSIST".

The operation switching terminal, "/T\_R", is controlled by the control line (/T\_R) output from the ASIC (IC607).

When the /T\_R logic is low, VCO-2 is activated, and when the /T\_R logic is high, VCO-1 is activated.

The voltage control terminals, "CV" and "ASSIST", are controlled by the PLL IC (IC400) and ASIC (IC607) and the output frequency changes continuously according to the applied voltage. For the modulation input terminal, "VCO\_MOD", the output frequency changes according to the applied voltage. This is used to modulate the VCO output.

### 5-3. PLL IC (IC400)

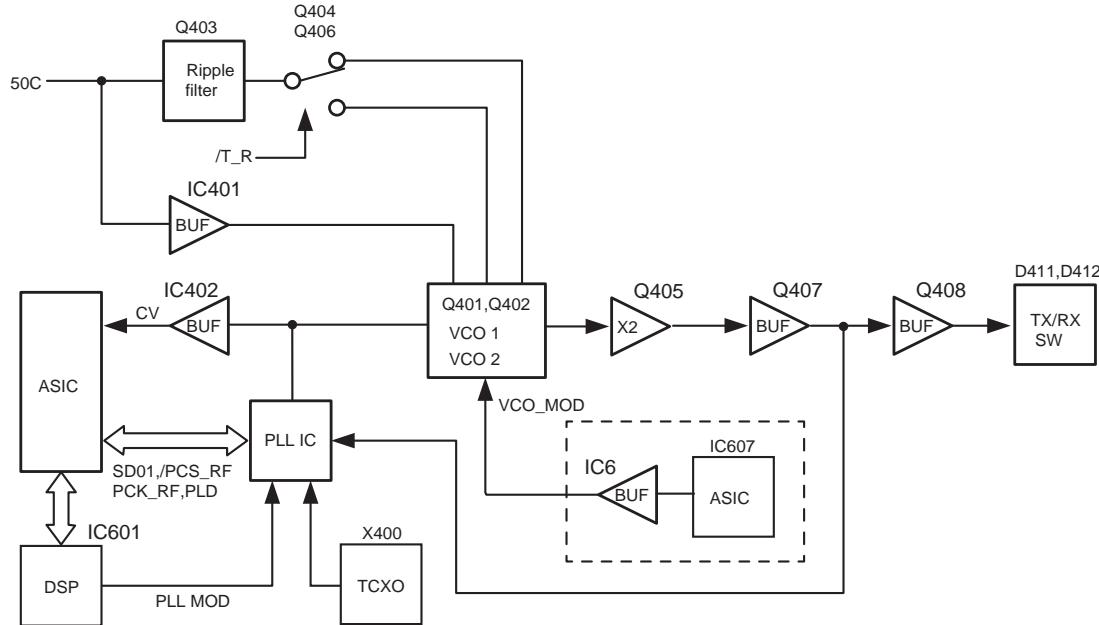

The PLL IC compares the differences in phases of the VCO oscillation frequency and the TCXO reference frequency, returns the difference to the VCO CV terminal and realizes the "Phase Locked Loop" for the return control. This allows the VCO oscillation frequency to accurately match (lock) the desired frequency.

# CIRCUIT DESCRIPTION

When the frequency is controlled by the PLL, the frequency convergence time increases as the frequency difference increases when the set frequency is changed. To supplement this, the ASIC is used before control by the PLL IC to bring the VCO oscillation frequency close to the desired frequency. As a result, the VCO CV voltage does not change and is always stable at approximately 2.5V.

The desired frequency is set for the PLL IC by the ASIC (IC607) through the 3-line "SDO1", "PCK\_RF", "/PCS\_RF" serial bus. Whether the PLL IC is locked or not is monitored by the ASIC through the "PLD" signal line. If the VCO is not the desired frequency (unlock), the "PLD" logic is low.

"PLLMOD" receives the modulation data from the DSP (IC601).

**Fig. 6 PLL block diagram**

## 6. Control Circuit

The control circuit consists of CPU in ASIC (IC607) and its peripheral circuits. CPU mainly performs the following;

- 1) Switching between transmission and reception by PTT signal input.
- 2) Reading system, zone, frequency, and program data from the memory circuit.
- 3) Sending frequency program data to the PLL.
- 4) Controlling squelch on/off by the DC voltage from the squelch circuit.
- 5) Controlling the audio mute circuit by decode data input.

### 6-1. ASIC

The ASIC (IC607) is a 32-bit RISC processor, equipped with peripheral function and ADC/DAC.

This ASIC operates at 18.432MHz clock and 3.3V/1.5V DC. It controls the flash memory, SRAM, DSP, the receive circuit, the transmitter circuit, the control circuit, and the display circuit and transfers data to or from an external device.

### 5-4. Local Switch (D411, D412)

The connection destination of the signal output from the buffer amplifier (Q408) is changed with the diode switch (D412) that is controlled by the transmission power supply, 50T, and the diode switch (D411) that is controlled by the receive power supply, 50R. If the 50T logic is high, it is connected to a send-side RF amplifier (Q101). If the 50T logic is low, it is connected to a receive-side mixer (IC200).

## 6-2. Memory Circuit

The memory circuit consists of the ASIC (IC607), the SRAM (IC603), and the flash memory (IC600). The flash memory has a capacity of 32M-bit that contains the transceiver control program for the ASIC and stores the data. It also stores the data for transceiver channels and operating parameters that are written by the FPU. This program can be easily written from external devices. The SRAM has a capacity of 1M-bit that contains work area and data area.

### ■ Flash memory

#### Note :

- The flash memory stores the data that is written by the FPU (KPG-141D), tuning data (Deviation, Squelch, etc.) and firmware program (User mode, Test mode, Tuning mode, etc.). This data must be rewritten when replacing the flash memory.

### ■ SRAM (Static memory)

#### Note :

- The SRAM has temporary data area and work area.

# CIRCUIT DESCRIPTION

## 6-3. LCD

The LCD is controlled using the 4 serial line from ASIC (IC607).

## 6-4. Key Detection Circuit (K3 model only)

Keys are detected using the LCD controller driver IC (IC8). If a pressed key is detected by IC8, it is informed to IC607 through the serial line.

## 6-5. Low Battery Warning

The battery voltage is divided using R500 and R502 and is detected by the ASIC (IC607). When the battery voltage falls below the voltage set by the Low battery warning adjustment, the red LED blinks to notify the operator that it is time to replace the battery. If the battery voltage falls even more (approx. 5.8V), a beep sounds and transmission stops.

Low battery warning	Battery condition
The red LED blinks during transmission.	The battery voltage is low but the transceiver is still usable.
The red LED blinks and the warning tone beeps while the PTT switch is pressed.	The battery voltage is low and the transceiver is not usable to make calls.

## 6-6. DSP

The DSP circuit consists of a DSP (IC601) and processes the baseband signal. The DSP operates on an external clock of 18.432MHz (the same as the IC607), the I/O section operates at 3.3V and the core section operates at 1.5V.

The DSP carries out the following processes:

- 4 Level FSK processing
- Analog FM pre-emphasis/de-emphasis
- Vocoder processing between audio codec and modulation/demodulation
- CAI processing, such as error correction encoding
- QT/DQT encoding/decoding
- LTR encoding/decoding
- DTMF encoding/decoding
- MSK encoding/decoding
- Compressor/expander processing
- Voice scrambler processing
- Transmit/receive audio filtering processing
- Microphone amplifier AGC processing
- Audio mute processing
- Modulation level processing

## 7. Power Supply Circuit

The battery voltage (+B) is provided from the battery terminal on the TX-RX unit (X57). The battery voltage passes through the 2.5A fuse (F500), and goes to the RF final amplifier, AVR ICs (IC504, IC900), DC/DC converter (IC505), and voltage detector IC (IC506). The voltage detector watches the battery voltage. If the battery voltage is 5.6V or higher, the detector outputs High.

When the VOL SW is turned on, SB1 becomes high (battery voltage). DC/DC (IC505) operates if both SB1 and the output of the detector are high. IC505 outputs 3.8V and activates IC501 (33M), IC502 (15M), IC500 (33A) and IC503 (33C). As a result, ASIC and DSP operate.

The SBC signal becomes High after the ASIC operates, IC504 (50C), IC900 (50V) and Q500 (SB2) are turned on.

When the /SAVE signal becomes High, Q503 (50C) operates. Switches (Q504, Q505) are controlled by the ASIC.

Q504 (50T) is turned on in transmit mode. Q505 (50R) is turned on in receive mode.

When the VOL SW is turned off, the /PSW signal becomes

Low. After detecting the /PSW signal, the ASIC changes the SBC signal to Low.

## 8. Signaling Circuit

### 8-1. Encode (QT/DQT/LTR/DTMF/MSK)

Each signaling data signal of QT, DQT, LTR, DTMF and MSK is generated by the DSP circuit, superimposed on a modulation signal and output from IC607.

Each deviation of the TX QT, DQT, LTR, DTMF and MSK tone is adjusted by changing the output level of IC601 and the resulting signal is routed to the VCO and PLL.

### 8-2. Decode (QT/DQT/LTR/DTMF/MSK)

The audio signal is removed from the FM detection signal sent to the DSP circuit and the resulting signal is decoded.

## 9. Compander Circuit

The term "compander" means compressor and expander. The compander reduces noise by utilizing a compressor and an expander. The transceiver contains a DSP (IC601) to perform this operation. The transceiver compander can be turned on or off using the FPU.

# CIRCUIT DESCRIPTION

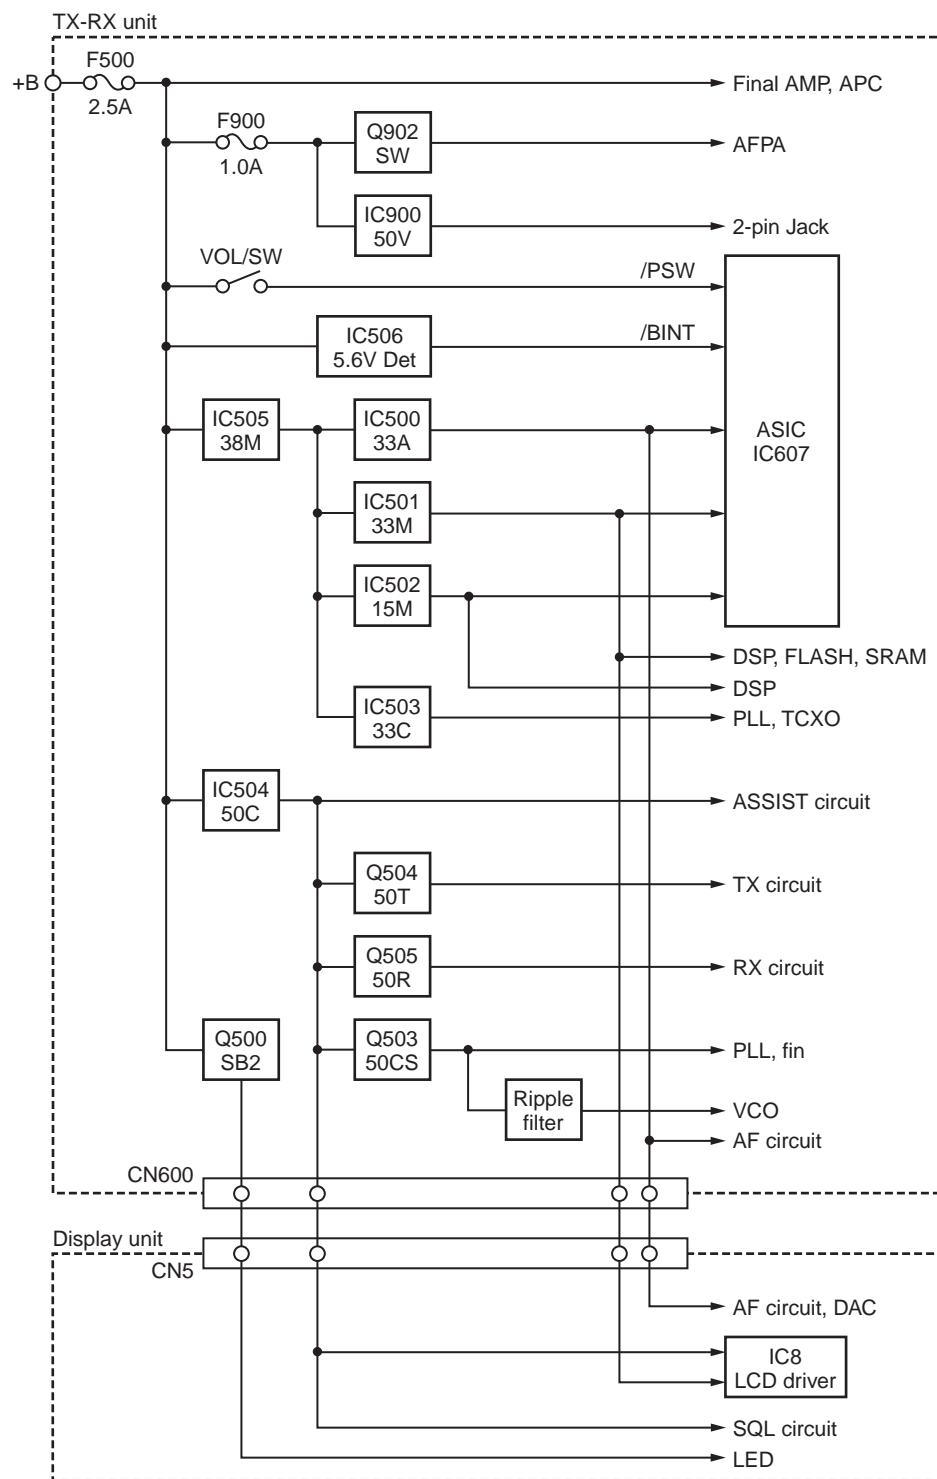

Fig. 7 Power supply circuit

## COMPONENTS DESCRIPTION

## Display unit (X54-3760-12) K type

Ref. No.	Part Name	Description
IC1	IC	ASQ BPF/ASQ BPF
IC2	IC	OP AMP(AF LPF/MIC AMP)
IC4	IC	D/A converter
IC6	IC	OP AMP(VCO_MOD/VREF)
IC8	IC	LCD driver
Q1	Transistor	TX/BUSY LED switch
Q2	FET	SQL switch
Q3	Transistor	SQL noise amplifier
Q4,5	Transistor	MIC AGC
Q6~8	Transistor	KEY backlight sw
D1	LED	TX/BUSY LED
D2	Diode	Noise detector
D3,4	Diode	AGC detector

## Display unit (X54-3760-10) K3 type

Ref. No.	Part Name	Description
IC1	IC	ASQ BPF/ASQ BPF
IC2	IC	OP AMP(AF LPF/MIC AMP)
IC4	IC	D/A converter
IC6	IC	OP AMP(VCO_MOD/VREF)
IC8	IC	LCD driver
Q1	Transistor	TX/BUSY LED switch
Q2	FET	SQL switch
Q3	Transistor	SQL noise amplifier
Q4,5	Transistor	MIC AGC
Q6~8	Transistor	KEY backlight sw
D1	LED	TX/BUSY LED
D2	Diode	Noise detector
D3,4	Diode	AGC detector
D7~14	LED	KEY backlight
D15,16	Diode	KEY control
D18,19	LED	LCD backlight

## TX-RX unit (X57-8370-10)

Ref No.	Part Name	Description
IC100	IC	APC control
IC200	IC	1st mixer
IC300	IC	Buffer amplifire (DET)
IC301	IC	FM system
IC302	IC	DC amplifire (ASQ/RSSI)
IC400	IC	PLL system
IC401	IC	DC amplifire (Assist)
IC402	IC	DC amplifire (CV/APC)
IC500	IC	Voltage regulator (33A)
IC501	IC	Voltage regulator (33M)
IC502	IC	Voltage regulator (15M)
IC503	IC	Voltage regulator (33C)
IC504	IC	Voltage regulator (50C)
IC505	IC	DC/DC converter (38M)
IC506	IC	Reset
IC600	IC	Frash memory
IC601	IC	DSP
IC602	IC	Sum amplifire
IC603	IC	SRAM
IC604	IC	Reset
IC605	IC	Motion sensor
IC606	IC	Buffer amplifire
IC607	IC	ASIC
IC608,609	IC	And gate (2 Input)
IC900	IC	Voltage regulator (50V)
IC901	IC	Audio power amplifire
Q101	Transistor	RF amplifire
Q102	FET	Pre-drive amplifire
Q103	Transistor	DC switch (FET BIAS)
Q104	FET	Drive amplifire
Q105	FET	DC switch (APC)
Q106	FET	Final amplifire
Q107	Transistor	DC switch (APC)
Q108	FET	Switch control (BIAS)
Q109	FET	Switch control (APC)
Q200	FET	RF amplifire(LNA)
Q300	Transistor	Tripler
Q301	Transistor	1st IF amplifire
Q401	FET	VCO (TX/RX)
Q402	FET	VCO (TA)

# COMPONENTS DESCRIPTION

Ref No.	Part Name	Description
Q403	Transistor	Ripple Filter
Q404	FET	Switch control (Q406)
Q405	Transistor	Doubler
Q406	FET	DC switch (VCO)
Q407	Transistor	Buffer amplifire
Q408	Transistor	RF amplifire
Q500	FET	DC switch (SB2)
Q501	FET	Switch control (Q500)
Q502	Transistor	Switch control (Q504)
Q503	FET	DC switch (50CS)
Q504	Transistor	DC switch (50T)
Q505	Transistor	DC switch (50R)
Q506,507	FET	Level converter
Q508	Transistor	Switch control (SB1)
Q509	Transistor	Load
Q600	FET	DC switch (SB2)
Q900	Transistor	DC switch (SB2)
Q901	Transistor	Switch control (Q902)
Q902	Transistor	DC switch (AF AMP)
Q903	FET	Switch control (AF mute)
Q904	FET	AF mute switch
Q905	FET	Level converter
Q906	FET	AF mute switch
D100	Zener diode	Over voltage protection
D102-105	Diode	Antenna switch
D200	Diode	Limiter
D400	Diode	Limiter
D402,403	Variable capacitnce diode	VCO frequency control
D404-407	Variable capacitnce diode	VCO assist control
D408,409	Variable capacitnce diode	TX modulation
D410	Diode	Speed up
D411,412	Diode	RF switch
D500	Diode	Receive protection (+B)
D501	Diode	Speed up
D502,503	Diode	DC/DC converter
D505	Diode	Bypass
D506	Diode	Receive current prevention
D900,901	Diode	Receive current prevention

## PACKING

Parts with the exploded numbers larger than 700 are not supplied.

# TROUBLE SHOOTING

## Fault Diagnosis of the BGA (Ball Grid Array) IC

### ■ Overview

A flowchart for determining whether or not the transceiver can be powered on (the LCD does not function even if the power switch is turned on) due to broken BGA parts.

### ■ BGA parts

ASIC (IC607), DSP (IC601), FLASH (IC600), SRAM (IC603)

When the BGA IC is problematic, please bring the printed circuit board (X57-8370-10) in for service. Various ESN/default adjustment values are written on the printed circuit board for service.

Additionally various ESN stickers are included. (Please refer to pages 32.)

After the printed circuit board has been readjusted, please attach any ESN stickers to the chassis. When "ESN Validation" is used with Trunking, you must modify the ESN register.

#### ● Checking power supply voltage

Checking voltage	
Points to be checked	Normal voltage
33M IC501 (3 pin)	3.3V
15M IC502 (4 pin)	1.5V
33A IC500 (3 pin)	3.3V
Power supply of each device is connected through the coil or R. [ASIC] 33M: L612, 15M: L611, 33A: L610 [DSP] 33M: L607, 15M: R625 [FLASH] 33M: L605 [SRAM] 33M: L606	

When an abnormal value is confirmed.

#### Checking for an abnormal point

33M has an abnormal voltage.  
[ASIC]  
Remove L609 to check the voltage of the 33M.  
If the voltage becomes normal, the ASIC is broken.  
[DSP]  
Remove L607 to check the voltage of the 33M.  
If the voltage becomes normal, the DSP is broken.  
[FLASH]  
Remove L605 to check the voltage of the 33M.  
If the voltage becomes normal, the FLASH is broken.  
[SRAM]  
Remove L606 to check the voltage of the 33M.  
If the voltage becomes normal, the SRAM is broken.

#### ● Checking the clock

Checking the clock	
Points to be checked	Normal voltage (3.3V)
18.432MHz ASIC side R638	18.432MHz
DSP side R639	18.432MHz

When an abnormal value is confirmed.

#### 15M has an abnormal voltage.

[ASIC]  
Remove L611 to check the voltage of the 15M.  
If the voltage becomes normal, the ASIC is broken.  
[DSP]  
Remove R625 to check the voltage of the 15M.  
If the voltage becomes normal, the DSP is broken.

#### ● Checking the Reset/Control signal

Checking the control signal input to the ASIC	
Points to be checked	Normal voltage
RESET IC604 (4 pin)	3.3V
/BINT Q507 (6 pin)	3.3V
/PSW Q506 (3 pin)	3.3V

When an abnormal value is confirmed.

If the voltage is not corrected, there is a problem other than the BGA parts.

The BGA parts are not broken.

#### Checking the control signal output from the ASIC

Points to be checked	Normal voltage
/FRST C634	3.3V

When an abnormal value is confirmed.

If the /FRST is always 0V, the ASIC is broken.

If the /FRST repeats 3.3V and 0V at intervals, The ASIC, FLASH and SRAM may be broken.

#### ● Checking the output signal from the ASIC

Points to be checked	Normal voltage
SBC R541	3.3V

When an abnormal value is confirmed.

Remove R541, Q501 and R522. If the ASIC side is 0V, the ASIC/FLASH/SRAM may be broken.

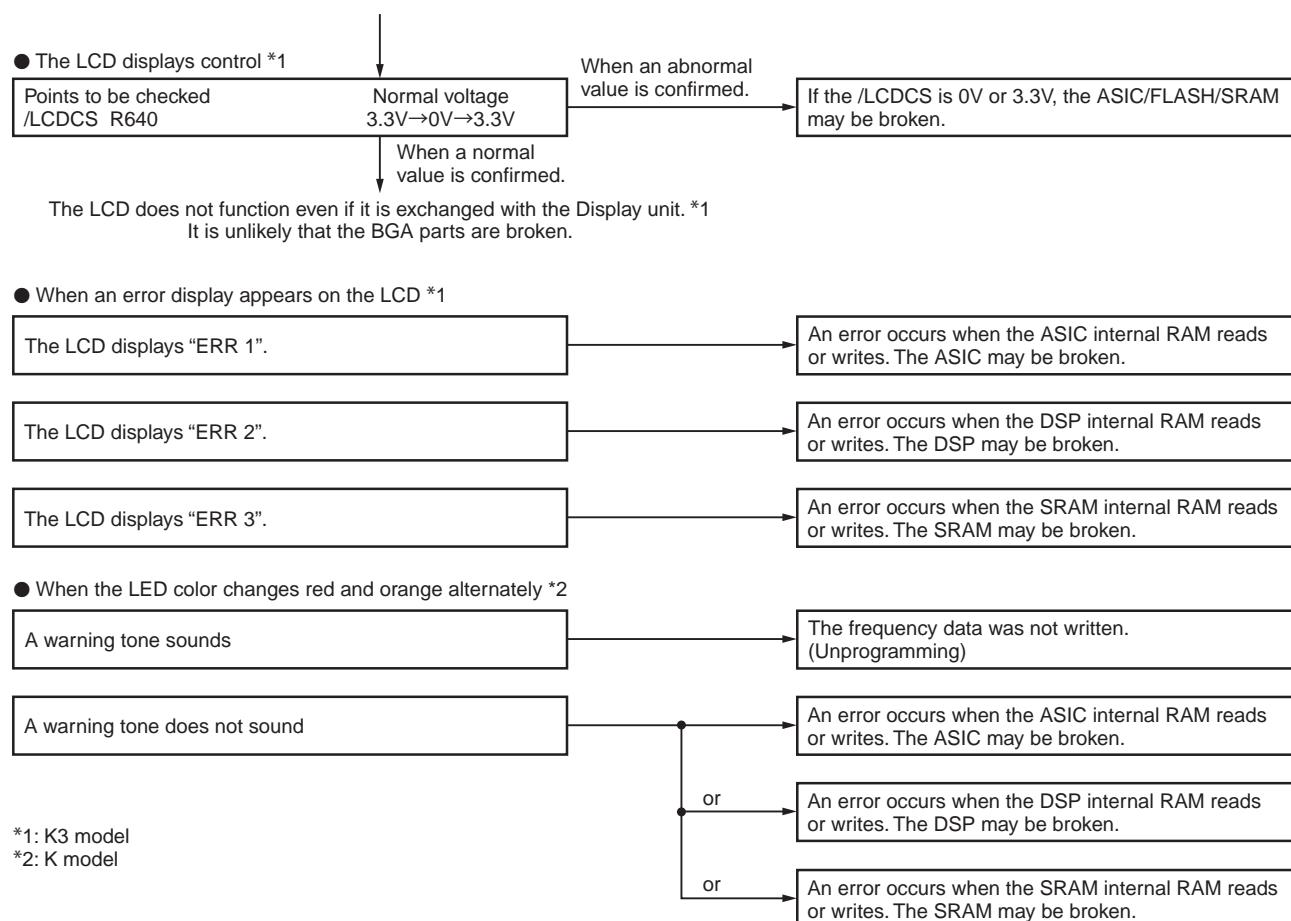

#### Points to be checked

Points to be checked	Normal voltage
/DRST R604	3.3V

When an abnormal value is confirmed.

If the /DRST is 0V, the ASIC/FLASH/SRAM are broken.

# TROUBLE SHOOTING

## ■ Descriptions of signal names

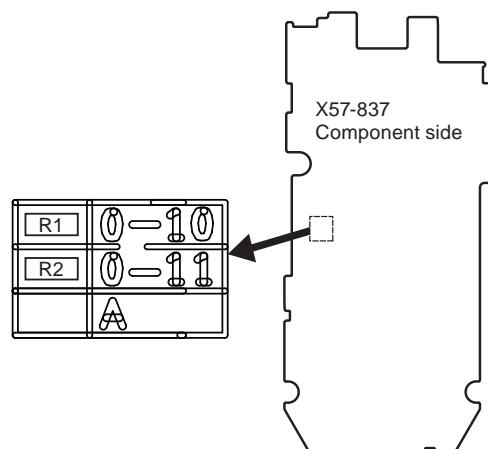

1) RST(RESET)	: ASIC reset signal	LOW → Reset
2) /BINT	: Battery final voltage monitoring	LOW → Final voltage
3) PSW	: Power switch signal	HIGH → ON
4) /FRST	: FLASH reset signal	LOW → Reset
5) SBC	: Switch B control	HIGH → ON
6) /DRST	: DSP reset signal	LOW → Reset

## Replacing TX-RX Unit

### ■ TX-RX unit Information

Model Name	Original TX-RX unit Number	For Service TX-RX unit Number
NX-420 (K,K3)	X57-8370-10	X57-8370-11

### ■ Method of confirming “Original TX-RX unit” and “Service TX-RX unit”

## TROUBLE SHOOTING

## ■ Supplied Accessories of "Service TX-RX unit"

Item (Including Parts Number)	Quantity
TX-RX Unit (X57-837)	1
KENWOOD ESN Label	1
NXDN ESN Label	1
MPT ESN Label	1
Addendum (B59-2655-XX)	1

## ■ "Service TX-RX unit" Data

The following data is written on the service TX-RX unit:

Data Type	Description
Firmware	NX-420 K type Firmware.
FPU Data (PC programming mode)	X57-837 (NX-420) Kx type data.
Various Adjustment Data (PC Test mode)	General adjustment values for the X57-837 (NX-420).
KENWOOD ESN	Model name: NX-420S Type: Kx The same number as the KENWOOD ESN label is written.
NXDN ESN/MPT ESN	The same number as the NXDN ESN/MPT ESN label is written.

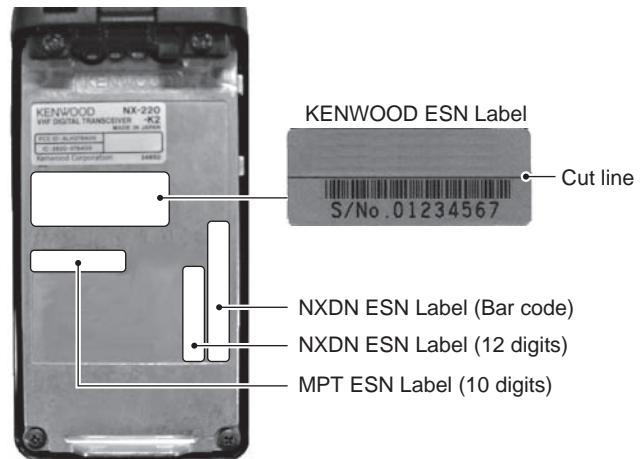

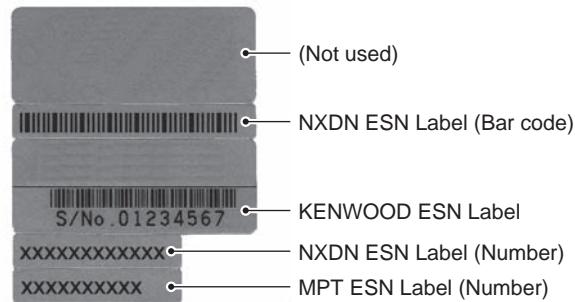

## ■ After Changing the PCB

1. After changing the printed circuit board, write the up-to-date Firmware following the instructions in the "REALIGNMENT - 6.Firmware Programming Mode".  
• Write the Firmware in accordance to the Market. If you write different Market Firmware, there are times communication with the FPU is not possible.
2. Using the KPG-141D, select your desired item (Model Name and Frequency) from the Models> Product Information menu, then use Program> Write Data to the Transceiver to write the FPU data (PC Programming mode). When writing to the transceiver, a Warning Message, corresponding to the item selected, appears. Click [OK] to continue writing the data.
3. Enter Program> Test Mode, then adjust the various adjustment data (PC Test Mode) as described in the "ADJUSTMENT".
4. Attach the new labels corresponding to the new printed circuit board. (Refer to the images below for label placement.)
5. If necessary, write the FPU data used by the customer with the KPG-141D.

## Note:

- When using the ESN Validation function of Trunking, the ESN number changes when the circuit board is changed (the number is written on the circuit board); the Trunking System cannot be accessed. Maintain the ESN data of the Trunking System following the new ESN.
- When a new printed circuit board is used, the KENWOOD ESN changes, as does the Transceiver Information display of the KPG-141D, but this does not have any effect on the operation of the transceiver.
- If changing to the original ESN, please contact our service center.

## ■ ESN Label Layout

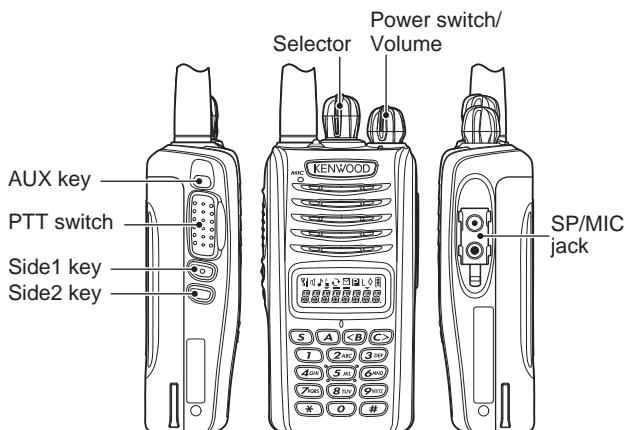

## Note:

A UPC code and UPC barcode is not printed on the KENWOOD ESN Label. If necessary, cut the label at the cutoff line and attach only the serial number.

# ADJUSTMENT

## Controls

### ■ Preparations for checking/tuning the transceiver

Before attempting to check/tune the transceiver, connect the unit to a suitable power supply.

Whenever the transmitter is turned on, the unit must be connected to a suitable dummy load (i.e. power meter).

The speaker output connector must be terminated with a  $8\Omega$  dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during checking/tuning.

## Panel Test Mode (K3 model only)

### ■ Test mode operation features

This transceiver has a test mode. **To enter test mode, press and hold the [A] key while turning the transceiver power ON. Before the transceiver enters test mode, the frequency version information appears on the LCD momentarily.** Test mode can be inhibited by programming. To exit test mode, turn the transceiver power OFF. The following functions are available in test mode.

### ■ Key operation

Key	"—" not appears on the LCD display	
	Function	Display
[Selector]	Test channel up/down	Channel No.
[Side1]	Push: Squelch level up Hold: Squelch off	Squelch level Squelch off:  icon appears
[Side2]	Wide 5k/Wide 4k/Narrow/ Very narrow	Analog Wide 5k: "W" Wide 4k: "S" Narrow : "N" NXDN Narrow : "N" Very narrow: "V"
[S]	Shift to panel tuning mode	-
[A]	Function on	"—" appears on the LCD display
[<B>]	MSK 1200bps and 2400bps	2400bps:  icon appears
[C>]	Push: Test signaling up Hold: Test signaling up continuously	Signaling No.
[AUX]	Analog/NXDN	Analog: "A", NXDN: "N"
[PTT]	Transmit	-

Key	"—" not appears on the LCD display	
	Function	Display
[0] to [9] and [#, [*]	Use as the DTMF keypad. If a key is pressed during transmission, the DTMF corresponding to the key that was pressed is sent.	-

Key	"—" appears on the LCD display	
	Function	Display
[Selector]	Test channel up/down	Channel No.
[Side1]	Function off	-
[Side2]	LCD all lights	LCD all point appears
[S]	High power/Low power	High:  icon not appears Low:  icon appears
[A]	Function off	-
[<B>]	Comander on/off	On:  icon appears
[C>]	Beat shift on/off	On:  icon appears
[AUX]	Talk Around on/off	On:  icon appears
[PTT]	Transmit	-
[0] to [9] and [#, [*]	Function off	-

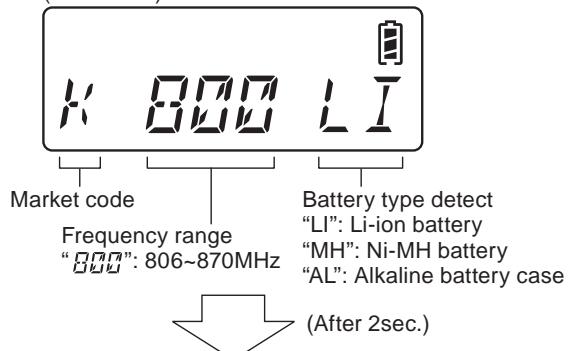

### • LED indicator

Red LED      Lights during transmission.

Green LED      Lights when there is carrier.

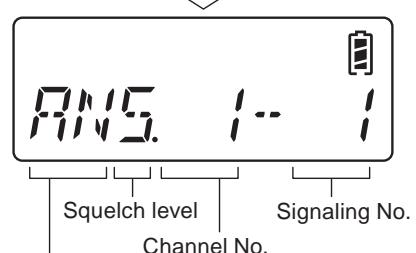

### • LCD display in panel test mode

(Power ON)

"MH": Ni-MH battery  
"AL": Alkaline battery case

(After 2sec.)

AW : Analog wide 5k mode  
AS : Analog wide 4k mode  
AN : Analog narrow mode  
NN : NXDN narrow mode  
NV : NXDN very narrow mode

## ADJUSTMENT

## ■ Frequency and Signaling

The transceiver has been adjusted for the frequencies shown in the following table. When required, readjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

## • Test frequency

CH	K3	
	RX (MHz)	TX (MHz)
1	851.05000	806.05000
2	860.05000	815.05000
3	869.95000	824.95000

RAN: Radio Access Number

PN9: Pseudo-Random Pattern (for production only)

No.7/No.9 item: PC test mode only.

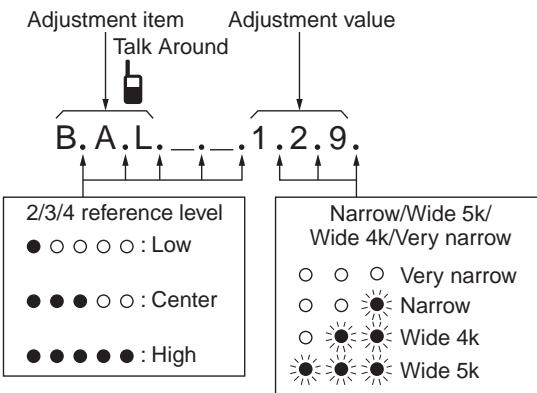

## ■ Panel Tuning Mode (K3 model only)

## ■ Transceiver tuning (To enter tuning mode)

To enter tuning mode, press the [**S**] key while the transceiver is in test mode. Use the [**<B**] key to write tuning data through tuning modes, and the [Selector] to adjust tuning requirements (1 to 4096 appears on the LCD).

Use the [**C>**] key to select the adjustment item through tuning modes. Use the [**A**] key to adjust 2/3/4 reference level adjustments, and use the [Side2] key to switch between Wide/Narrow/Very narrow.

## • LCD display in panel tuning mode

## ■ Key operation

Key	Function	
	Push	Hold (1 second)
[Selector]	Adjustment value up/down	
[Side1]	20Hz/2kHz (During transmission in balance adjustment)	-
[Side2]	Wide/Narrow/Very narrow	-
[S]	Shift to panel test mode	-
[A]	To enter 5 reference level adjustments	-
[<B]	Writes the adjustment value	-
[C>]	Go to next adjustment item	Back to last adjustment item
[AUX]	-	
[PTT]	Transmit

## ■ 4 reference level adjustments frequency

Tuning point	RX (MHz)	TX (MHz)
Low	851.100000	806.000000
High	869.900000	825.000000
TA Low	851.100000	851.000000
TA High	869.900000	870.000000

## ■ Adjustment item supplement

Adjustment Item	Description
Counterclockwise Volume	“ Counterclockwise Volume ” is adjusted at the minimum volume position. “ Clockwise Volume ” is adjusted at the maximum volume position. These adjustments can correct the volume variation. Both “ Counterclockwise Volume ” and “ Clockwise Volume ” must be adjusted. (The curve data of volume is applied.)
Receive Assist	The lock voltage of VCO (Receive) is adjusted. This item must be adjusted before all adjustment items for receiver section are adjusted. This item can be adjusted only in PC Test Mode.
Transmit Assist	The lock voltage of VCO (Transmit) is adjusted. This item must be adjusted before all adjustment items for transmitter section are adjusted. This item can be adjusted only in PC Test Mode.
Frequency	Frequency stability is adjusted under receiving condition with SSG. The SSG needs 0.001ppm accuracy so please use a standard oscillator if necessary. This item can be adjusted only in PC Test Mode so that the adjustment value is not changed easily.
High Transmit Power	High Transmit Power is adjusted.
Low Transmit Power	Low Transmit Power is adjusted.
Balance	The transmit audio frequency response is adjusted. This item is adjusted so that the deviation of 2kHz becomes the same deviation of 20Hz. This item must be adjusted before all adjustment items for deviations are adjusted.
Maximum Deviation (NXDN Narrow/Very Narrow)	Maximum Deviation of NXDN (Narrow/Very Narrow) is adjusted.
Maximum Deviation (Analog Wide 5k/Wide 4k/ Narrow)	Maximum Deviation of Analog (Wide 5k/Wide 4k/Narrow) is adjusted. This item must be adjusted before all adjustment items for tone deviations are adjusted. <b>Note:</b> “ Maximum Deviation (Analog Narrow) ” must be adjusted before “ CW ID Deviation (NXDN Very Narrow) ” is adjusted.
QT Deviation	QT tone deviation is adjusted.
DQT Deviation	DQT tone deviation is adjusted.
LTR Deviation	LTR tone deviation is adjusted.
DTMF Deviation	DTMF tone deviation is adjusted.
MSK Deviation	MSK tone deviation is adjusted.
CW ID Deviation	CW ID tone deviation is adjusted. CW ID is used to inform the others who is transmitting on a 6.25kHz spacing channel. (In FCC rule, Analog mode or CW ID is required for each channel-spacing.)

## ADJUSTMENT

Adjustment Item	Description
RSSI Reference	The minimum RSSI level for scan stop is adjusted.
Open Squelch	The squelch level at level "5" is adjusted.
Low RSSI	RSSI display level "Y" is adjusted. Both "Low RSSI" and "High RSSI" must be adjusted.
High RSSI	(The curve data of RSSI level is applied.)
Tight Squelch	The squelch level at level "9" is adjusted.
Battery Warning Level	Battery Warning Level (LED blinking level) is adjusted. Battery Warning Level minus 0.4V is the transmission inhibited level.

Note: In this Panel tuning mode flow chart, the Adjustment item name is modified.

## ADJUSTMENT

# ADJUSTMENT

## Test Equipment Required for Alignment

Test Equipment	Major Specifications	
1. Standard Signal Generator (SSG)	Frequency Range Modulation Output When performing the Frequency adjustment, the following accuracy is necessary. • 0.001ppm Use a standard oscillator for adjustments, if necessary.	800 to 900MHz Frequency modulation and external modulation –127dBm/0.1µV to greater than –20dBm/22.4mV
2. Power Meter	Input Impedance Operation Frequency Measurement Capability	50Ω 800 to 900MHz Vicinity of 10W
3. Deviation Meter	Frequency Range	800 to 900MHz
4. Digital Volt Meter (DVM)	Measuring Range Input Impedance	10mV to 10V DC High input impedance for minimum circuit loading
5. Oscilloscope		DC through 30MHz
6. High Sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 1000MHz 0.2ppm or less
7. Ammeter		5A
8. AF Volt Meter (AF VTVM)	Frequency Range Voltage Range	50Hz to 10kHz 1mV to 10V
9. Audio Generator (AG)	Frequency Range Output	50Hz to 5kHz or more 0 to 1V
10. Distortion Meter	Capability Input Level	3% or less at 1kHz 50mV to 10Vrms
11. 8Ω Dummy Load		Approx. 8Ω, 3W
12. Regulated Power Supply		5V to 10V, approx. 3A Useful if ammeter equipped

The test equipment which is not used for adjustment is contained in this table.

### ■ Antenna connector adapter

The antenna connector of this transceiver uses an SMA terminal.

Use an antenna connector adapter [SMA(f) – BNC(f) or SMA(f) – N(f)] for adjustment. (The adapter is not provided as an option, so buy a commercially-available one.)

### ■ Nut wrench

In order to turn the volume nut and the channel selector nut, use a recommendation tool.

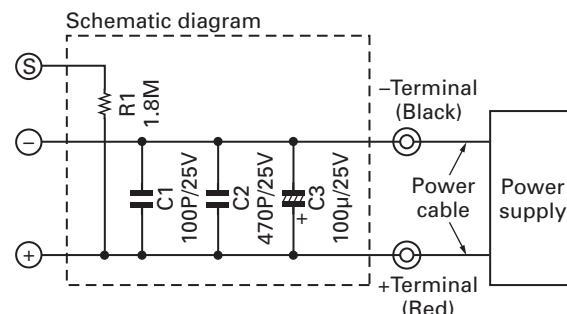

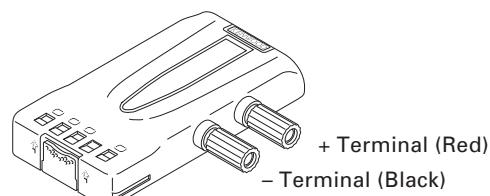

KENWOOD part No.: W05-1123-00

### ■ Battery Jig (W05-0909-00)

Connect the power cable properly between the battery jig installed in the transceiver and the power supply, and be sure output voltage and the power supply polarity prior to switching the power supply ON, otherwise over voltage and reverse connection may damage the transceiver, or the power supply or both.

When using the battery jig in user mode, the transceiver assumes that a lithium-ion battery pack is attached to the transceiver. In adjustment mode, battery type detection is not performed.

**Note:** When using the battery jig, you must measure the voltage at the terminals of the battery jig. Otherwise, a slight voltage drop may occur within the power cable, between the power supply and the battery jig, especially while the transceiver transmits.

Confirm that one pre-determined numeric in the range 1 to 256 appears. [Panel tuning mode] Press [ <b>&lt;B</b> ] key to store the adjustment value. [PC test mode] Press [Apply] button to store the adjustment value.		
14. Battery Warning Level check	[Panel test mode] 1) CH-Sig: 1-1 BATT terminal voltage: 6.0V while transmitting	1) Test Channel Channel: 1 Test Signaling Mode: Analog Signaling: 1 BATT terminal voltage: 6.0V while transmitting						Check	The transceiver can transmit with causing the LED to blink.	

# ADJUSTMENT

## ■ Necessary Deviation adjustment item for each signaling and mode

The following shows the necessary adjustment items for each signaling deviation. Please read the following table like the following example. In the case of the signaling "QT (Wide 5k)", this signaling is composed of three elements [Balance, Maximum Deviation (Analog Wide 5k) and QT Deviation (Wide 5k)]. Please adjust Balance and Maximum Deviation (Analog Wide 5k) before adjusting QT Deviation (Wide 5k).

Mode	Signaling	Necessary adjustment and order			
		Wide 5k	Wide 4k	Narrow	Very Narrow
Analog	Audio	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Wide 5k)	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Wide 4k)	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Narrow)	-
	QT	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Wide 5k) Step 3. QT Deviation (Wide 5k)	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Wide 4k) Step 3. QT Deviation (Wide 4k)	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Narrow) Step 3. QT Deviation (Narrow)	-
	DQT	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Wide 5k) Step 3. DQT Deviation (Wide 5k)	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Wide 4k) Step 3. DQT Deviation (Wide 4k)	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Narrow) Step 3. DQT Deviation (Narrow)	-
	LTR	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Wide 5k) Step 3. LTR Deviation (Wide 5k)	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Wide 4k) Step 3. LTR Deviation (Wide 4k)	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Narrow) Step 3. LTR Deviation (Narrow)	-
	DTMF	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Wide 5k) Step 3. DTMF Deviation (Wide 5k)	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Wide 4k) Step 3. DTMF Deviation (Wide 4k)	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Narrow) Step 3. DTMF Deviation (Narrow)	-
	MSK (Fleet-Sync)	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Wide 5k) Step 3. MSK Deviation (Analog Wide 5k)	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Wide 4k) Step 3. MSK Deviation (Analog Wide 4k)	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Narrow) Step 3. MSK Deviation (Analog Narrow)	-
NXDN	Audio	-		Step 1. Balance adjust Step 2. Maximum Deviation (NXDN Narrow)	Step 1. Balance adjust Step 2. Maximum Deviation (NXDN Very Narrow)
	CW ID	-		-	Step 1. Balance adjust Step 2. Maximum Deviation (Analog Narrow) Step 3. CW ID Deviation (NXDN Very Narrow)

- Balance is common with all the above deviation adjustments. If Balance (Transmitter Section 3) has already adjusted, please skip Step 1 and adjust from Step 2.
- Maximum Deviation (Analog Wide 5k/Wide 4k/Narrow) is common with all the analog signaling deviations and CWID Deviation (NXDN Very Narrow). If Balance and Maximum Deviation (Analog Wide 5k/Wide 4k/Narrow) (Transmitter Section 5) have already adjusted, please skip Step 2 and adjust from Step 3.

## ADJUSTMENT

## Receiver Section

Item	Condition		Measurement			Adjustment			Specifications / Remarks
	Panel tuning mode	PC test mode	Test-equipment	Unit	Terminal	Unit	Parts	Method

## LEVEL DIAGRAM

## Receiver Section

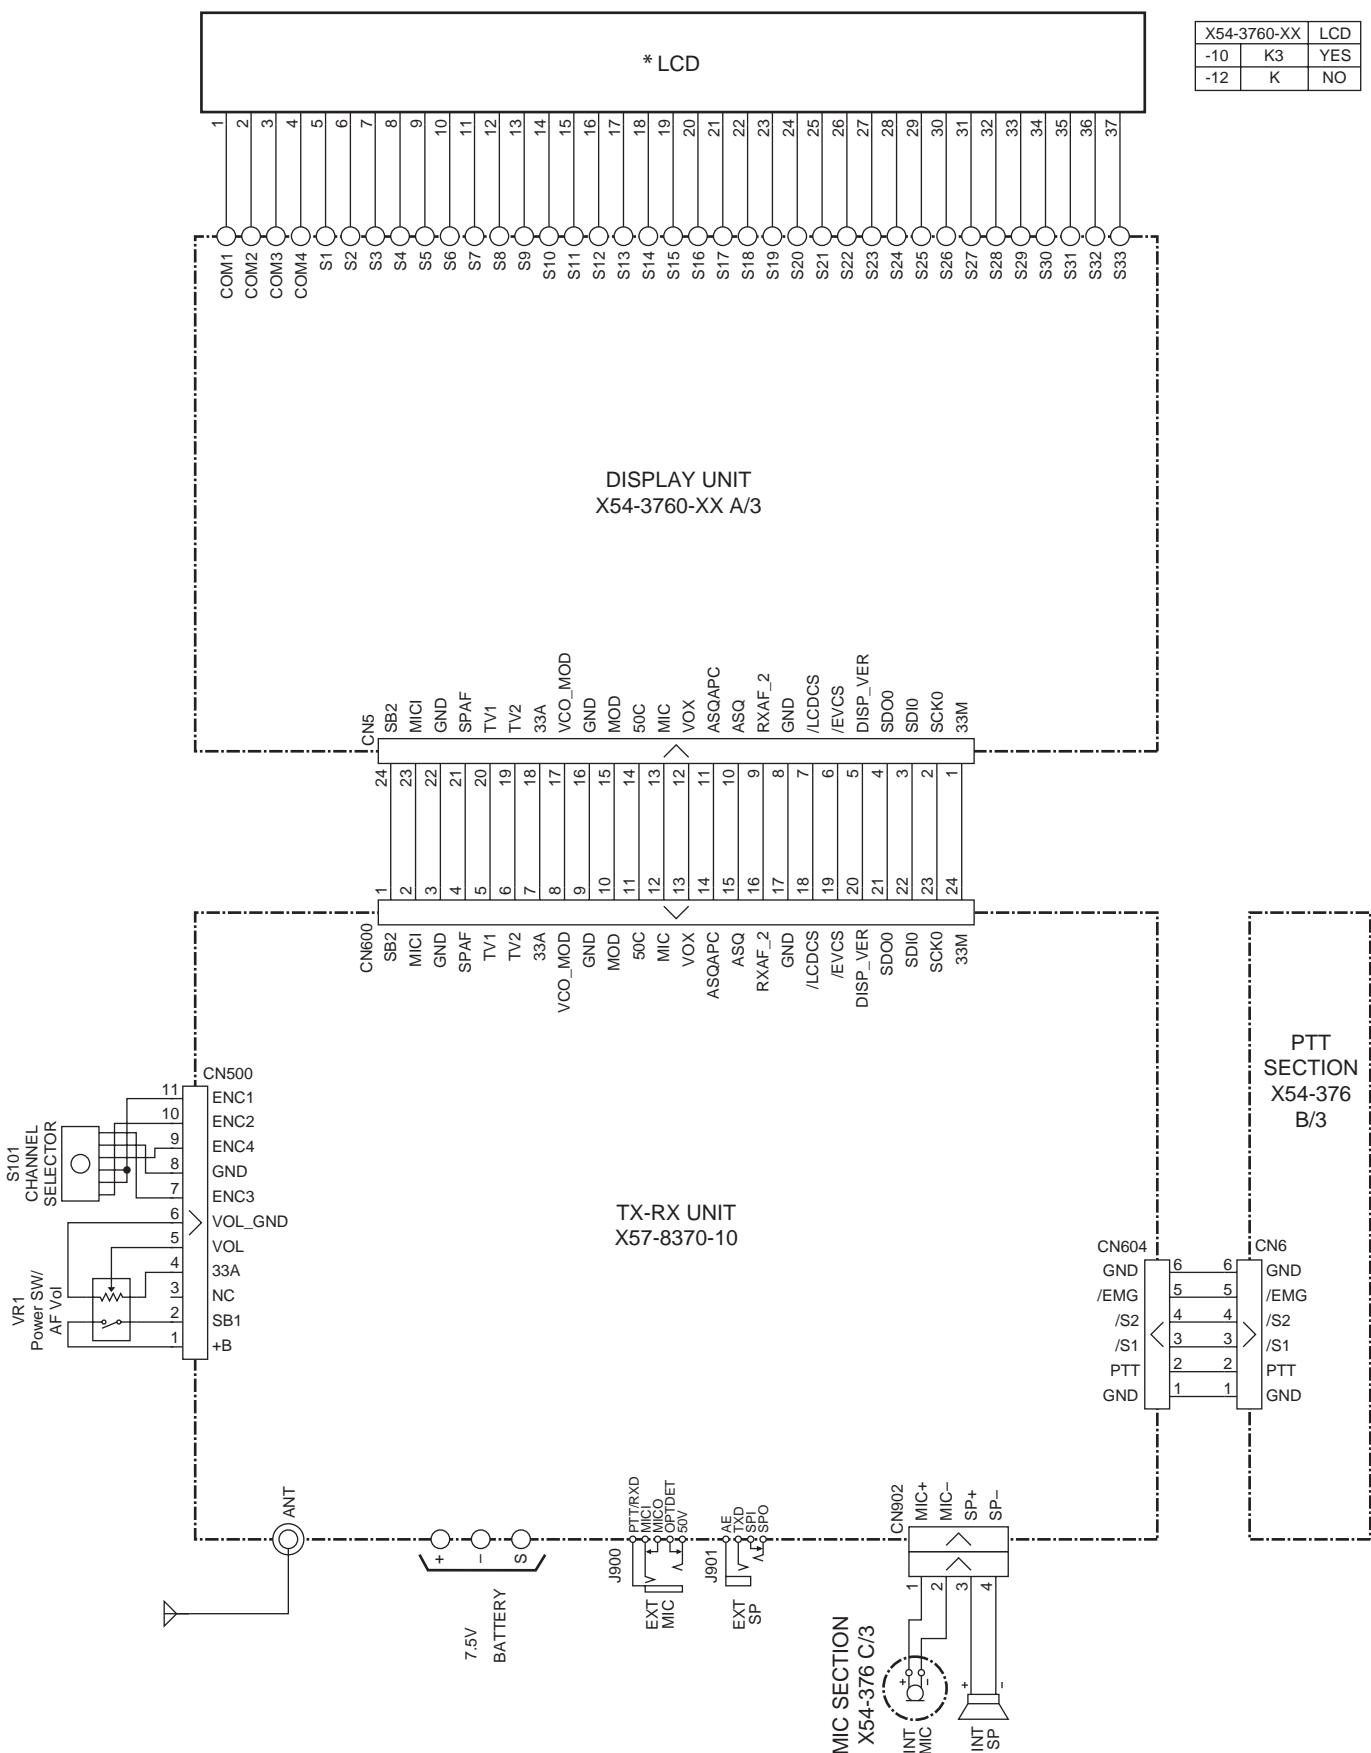

To make measurements in the AF section, connect the AC level meter. (ANT input: -47dBm, 1kHz FM, 3kHz DEV (Wide 5kHz))  
In the RF section, use a 100pF coupling capacitor.  
(The display shows the SSG input value required to obtain 12dB SINAD without local level.)

## Transmitter Section

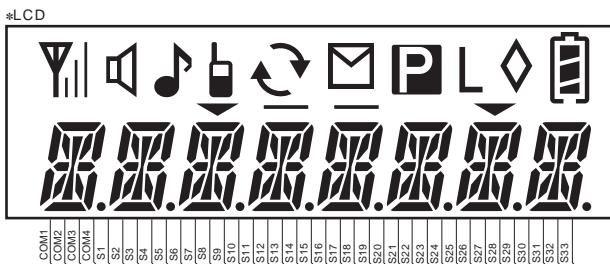

AG is set to the MIC input becomes (3kHz/2.4kHz/1.5kHz) at 1kHz MOD (Wide 5kHz/Wide 4kHz/Narrow).  
To make measurements in the AF section, connect the AC level meter.  
In the RF section, use a 100pF coupling capacitor.

# SPECIFICATIONS

## GENERAL

Models .....	K : Basic Model K3 : Full Key w/LCD Model
Frequency Range .....	TX : 806~825MHz, 851~870MHz RX : 851~870MHz
Number of Channels.....	K3 : 260 K : 64
Zones.....	K3 : 128 K : 4
Max. Channels per Zone .....	K3 : 250 K : 16
Channel Spacing .....	Analog : 12.5/25kHz Digital : 6.25/12.5kHz
Operating Voltage .....	7.5V DC ±20%
Battery Life (5-5-90)	
with KNB-55L.....	Approx. 8.5 hours
with KNB-56N.....	Approx. 8.5 hours
with KNB-57L.....	Approx. 11.5 hours
Operating Temperature Range .....	-22°F to +140°F (-30°C to +60°C)
Frequency Stability .....	±1.0ppm
Antenna Impedance .....	50Ω
Dimensions (W x H x D) (Projections not included)	
K	
Radio only.....	2.20 x 4.35 x 1.48 in (56 x 110.5 x 37.5 mm)
with KNB-55L.....	2.20 x 4.35 x 1.50 in (56 x 110.5 x 38.1 mm)
with KNB-56N .....	2.20 x 4.35 x 1.72 in (56 x 110.5 x 43.8 mm)
with KNB-57L.....	2.20 x 4.35 x 1.58 in (56 x 110.5 x 40.1 mm)
K3	
Radio only .....	2.20 x 4.35 x 1.45 in (56 x 110.5 x 36.9 mm)
with KNB-55L .....	2.20 x 4.35 x 1.48 in (56 x 110.5 x 37.5 mm)
with KNB-56N .....	2.20 x 4.35 x 1.70 in (56 x 110.5 x 43.2 mm)
with KNB-57L .....	2.20 x 4.35 x 1.56 in (56 x 110.5 x 39.5 mm)
Weight (net)	
Radio only.....	K : 7.2 oz (205g) K3 : 7.4 oz (210g)
with KNB-55L.....	K : 10.6 oz (300g) K3 : 10.8 oz (305g)
with KNB-56N .....	K : 14.1 oz (400g) K3 : 14.3 oz (405g)
with KNB-57L.....	K : 11.5 oz (325g) K3 : 11.6 oz (330g)

## RECEIVER

Sensitivity .....	Digital @6.25kHz (3% BER) : 0.20µV Digital @12.5kHz (3% BER) : 0.25µV Analog (12dB SINAD) : 0.25µV
Selectivity .....	Analog @25kHz : 72dB Analog @12.5kHz : 65dB
Intermodulation Distortion .....	Analog : 70dB
Spurious Response .....	Analog : 70dB
Audio Distortion .....	Less than 3%
Audio Output.....	500mW/8Ω

## TRANSMITTER

RF Power Output .....	3W/1W
Spurious Response .....	70dB
FM Hum and Noise.....	Analog @25kHz : 45dB Analog @12.5kHz : 40dB
Audio Distortion .....	Less than 3%
Modulation .....	16K0F3E, 11K0F3E, 8K30F1E, 8K30F1D, 8K30F7W, 4K00F1E, 4K00F1D, 4K00F7W, 4K00F2D

Analog measurements made per TIA/EIA 603 and specifications shown are typical.  
Kenwood reserves the right to change specifications without prior notice or obligation.
