Neither is any liability assumed for damages resulting from the use of the information contained herein. Kenwood reserves the right to make changes to any products herein at any time for improvement purposes.

Firmware Copyrights

The title to and ownership of copyrights for firmware embedded in Kenwood product memories are reserved for Kenwood Corporation. Any modifying, reverse engineering, copy, reproducing or disclosing on an Internet website of the firmware is strictly prohibited without prior written consent of Kenwood Corporation. Furthermore, any reselling, assigning or transferring of the firmware is also strictly prohibited without embedding the firmware in Kenwood product memories.

NXDN Transceivers:

The AMBE+2(TM) voice coding technology is embedded in the firmware under the license of Digital Voice Systems, Inc.

GENERAL

INTRODUCTION

SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of this publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions, which are issued as required.

ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts: components, kits, and chassis. If the part number is not known, include the chassis or kit number of which it is a part and a sufficient description of the required component for proper identification.

PERSONAL SAFETY

The following precautions are recommended for personal safety :

- DO NOT transmit if someone is within two feet (0.6 meter) of the antenna.
- DO NOT transmit until all RF connectors are secure and any open connectors are properly terminated.
- SHUT OFF this equipment when near electrical blasting caps or while in an explosive atmosphere.
- All equipment should be properly grounded before power-up for safe operation.
- This equipment should be serviced by only qualified technicians.

PRE-INSTALLATION CONSIDERATIONS

1. UNPACKING

Unpack the radio from its shipping container and check for accessory items. If any item is missing, please contact KENWOOD immediately.

2. PRE-INSTALLATION CHECKOUT

2-1. Introduction

Each radio is adjusted and tested before shipment. However, it is recommended that receiver and transmitter operation be checked for proper operation before installation.

2-2. Testing

The radio should be tested complete with all cabling and accessories as they will be connected in the final installation. Transmitter frequency, deviation, and power output should be checked, as should receiver sensitivity, squelch operation, and audio output. Signaling equipment operation should be verified.

3. PLANNING THE INSTALLATION

3-1. General

Inspect the vehicle and determine how and where the radio antenna and accessories will be mounted.

Plan cable runs for protection against pinching or crushing wiring, and radio installation to prevent overheating.

3-2. Antenna

The favored location for an antenna is in the center of a large, flat conductive area, usually at the roof center. The trunk lid is preferred, bond the trunk lid and vehicle chassis using ground straps to ensure the lid is at chassis ground.

GENERAL

3-3. Radio

The universal mount bracket allows the radio to be mounted in a variety of ways. Be sure the mounting surface is adequate to support the radio's weight. Allow sufficient space around the radio for air cooling. Position the radio close enough to the vehicle operator to permit easy access to the controls when driving.

3-4. DC Power and wiring

1. This radio may be installed in negative ground electrical systems only. Reverse polarity will cause the cable fuse to blow. Check the vehicle ground polarity before installation to prevent wasted time and effort.
2. Connect the positive power lead directly to the vehicle battery positive terminal. Connecting the Positive lead to any other positive voltage source in the vehicle is not recommended.
3. Connect the ground lead directly to the battery negative terminal.
4. The cable provided with the radio is sufficient to handle the maximum radio current demand. If the cable must be extended, be sure the additional wire is sufficient for the current to be carried and length of the added lead.

4. INSTALLATION PLANNING – CONTROL STATIONS

4-1. Antenna system

Control station. The antenna system selection depends on many factors and is beyond the scope of this manual. Your KENWOOD dealer can help you select an antenna system that will best serve your particular needs.

4-2. Radio location

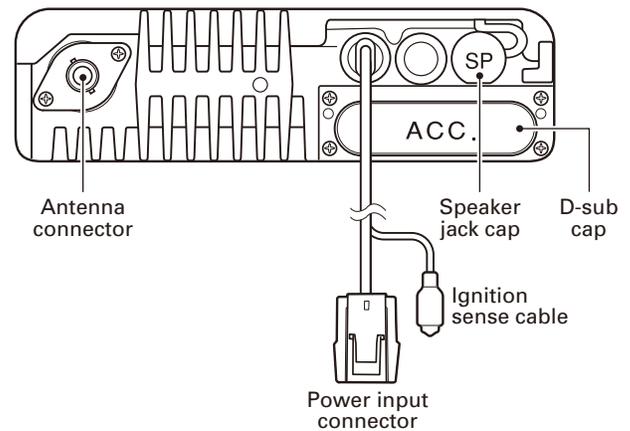

Select a convenient location for your control station radio which is as close as practical to the antenna cable entry point. Secondly, use your system's power supply (which supplies the voltage and current required for your system). Make sure sufficient air can flow around the radio and power supply to allow adequate cooling.

SERVICE

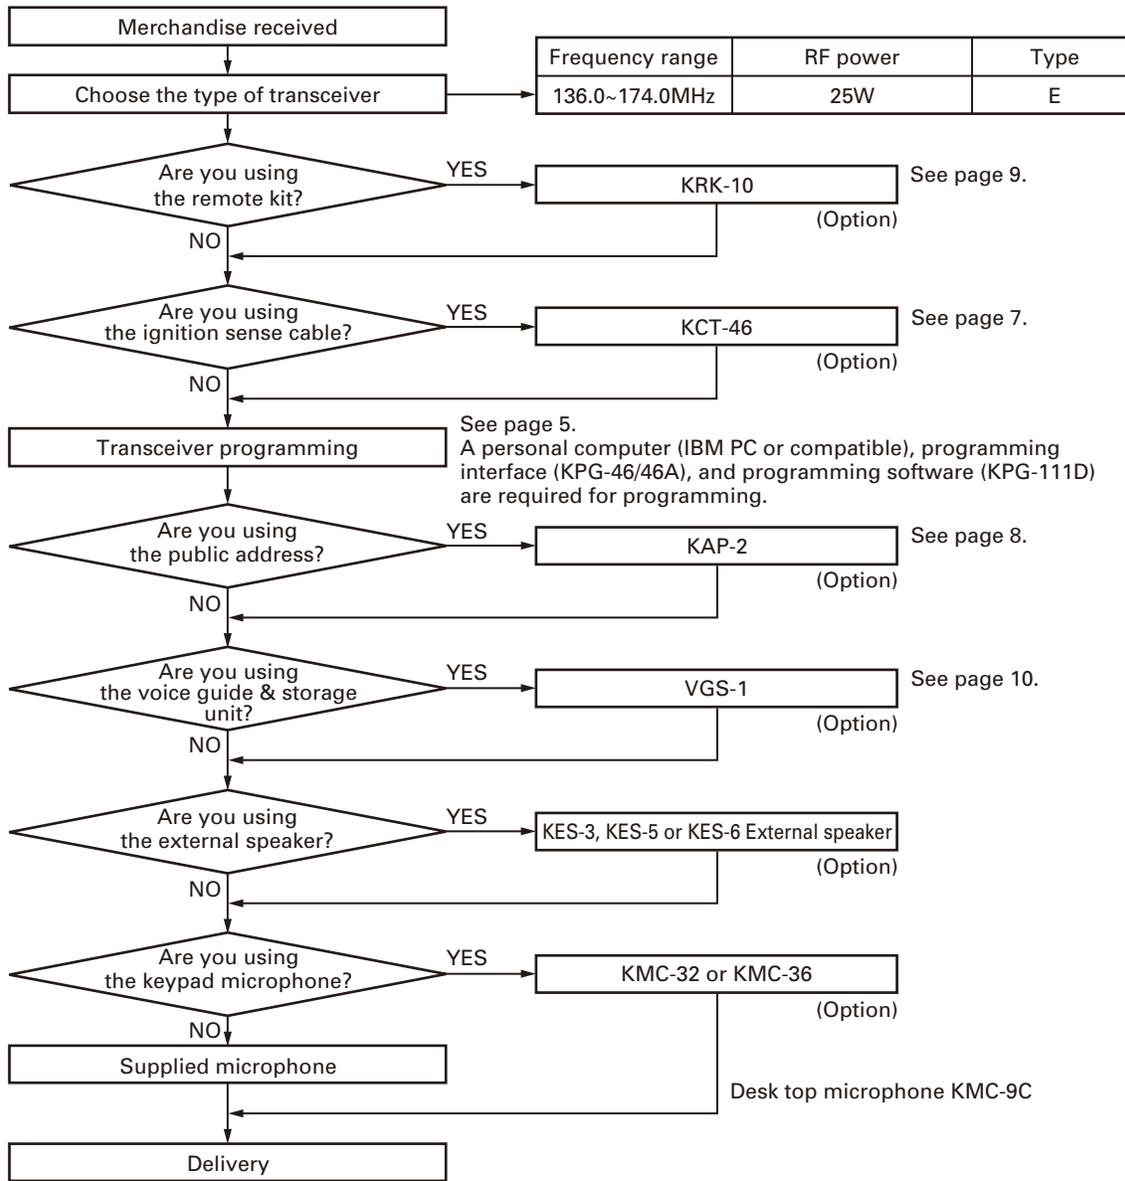

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained in this manual.

NOTE

- If you do not intend to use the speaker 3.5-mm jack and the D-sub 25-pin connector, fit the supplied speaker-jack cap and D-sub cap to stop dust and sand from getting in.
- If the transceiver is turned ON or OFF when the power-on/off status message is enabled, the transceiver sends the status.

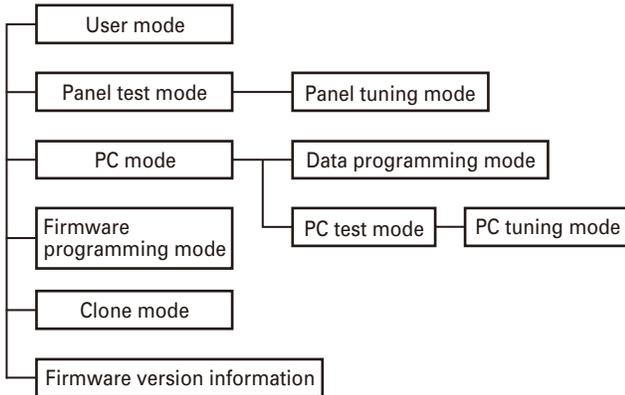

SYSTEM SET-UP

REALIGNMENT

1. Modes

Mode	Function
User mode	For normal use.
Panel test mode	Used by the dealer to check the fundamental characteristics.
Panel tuning mode	Used by the dealer to tune the audio.
PC mode	Used for communication between the transceiver and PC.
Data programming mode	Used to read and write frequency data and other features to and from the transceiver.
PC test mode	Used to check the transceiver using the PC. This feature is included in the FPU.
PC tuning mode	Used to tune the transceiver using the PC. This feature is included in the FPU.
Firmware programming mode	Used when changing the main program of the flash memory.
Clone mode	Used to transfer programming data from one transceiver to another.
Firmware version information	Used to confirm the internal firmware version.

2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
Panel test mode	[>] + Power ON
PC mode	Received commands from PC
Panel tuning mode	[Panel test mode] + [↔]
Firmware programming mode	[↔] + Power ON
Clone mode	[<] + Power ON
Firmware version information	[▲] + Power ON

3. Panel Test Mode

Setting method refer to ADJUSTMENT.

4. Panel Tuning Mode

Setting method refer to ADJUSTMENT.

5. PC Mode

5-1. Preface

The transceiver is programmed by using a personal computer, programming interface (KPG-46/46A) and programming software (KPG-111D).

The programming software can be used with a PC or compatible. Figure 1 shows the setup of a PC for programming.

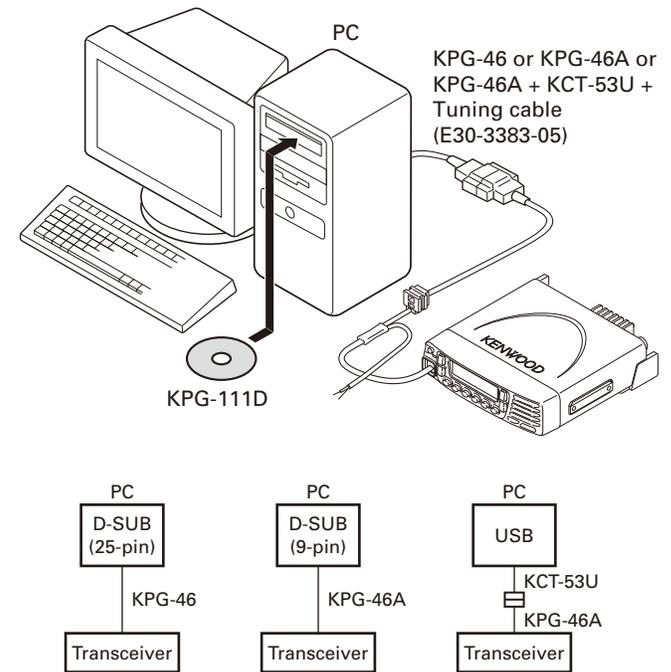

Fig. 1

5-2. Connection procedure

1. Connect the transceiver to the computer using the interface cable and USB adapter (When the interface cable is KPG-46A, the KCT-53U can be used.).

Note:

- You must install the KCT-53U driver in the computer to use the USB adapter (KCT-53U).
- When using the USB adapter (KCT-53U) for the first time, plug the KCT-53U into a USB port on the computer with the computer power ON.

2. When the POWER switch on, user mode can be entered immediately. When PC sends command the transceiver enter PC mode, and "PROGRAM" is displayed on the LCD.

When data transmitting from transceiver, the red LED is lights.

When data receiving to transceiver, the green LED is lights.

Note:

The data stored in the computer must match the "Model Name" when it is written into the flash memory.

REALIGNMENT

5-3. KPG-46/KPG-46A description

(PC programming interface cable: Option)

The KPG-46/46A is required to interface the transceiver to the computer. It has a circuit in its D-sub connector (KPG-46: 25-pin, KPG-46A: 9-pin) case that converts the RS-232C logic level to the TTL level.

The KPG-46/46A connects the 8-pin microphone connector of the transceiver to the RS-232C serial port of the computer.

5-4. KCT-53U description (USB adapter: Option)

The KCT-53U is a cable which connects the KPG-46A to a USB port on a computer.

When using the KCT-53U, install the supplied CD-ROM (with driver software) in the computer. The KCT-53U driver runs under Windows 2000, XP or Vista (32-bit).

5-5. Programming software KPG-111D description

The KPG-111D is the programming software for the transceiver supplied on a CD-ROM. This software runs under Windows 2000, XP or Vista on a PC or compatible machine.

The data can be input to or read from the transceiver and edited on the screen. The programmed or edited data can be printed out. It is also possible to tune the transceiver.

6. Firmware Programming Mode

6-1. Preface

Flash memory is mounted on the transceiver. This allows the transceiver to be upgraded when new features are released in the future. (For details on how to obtain the firmware, contact Customer Service.)

6-2. Connection procedure

Connect the transceiver to the personal computer (IBM PC or compatible) using the interface cable (KPG-46/46A) and USB adapter (KCT-53U: when the interface cable is KPG-46A, the KCT-53U can be used.). (Connection is the same as in the PC Mode.)

Note:

You can only program firmware from the 8-pin microphone connector on the front panel. Using the 25-pin logic interface on the rear panel will not work.

6-3. Programming

1. Start up the firmware programming software (Fpro.exe (ver. 4.0 or later)). The Fpro.exe exists in the KPG-111D installed holder.
2. Set the communications speed (normally, 115200 bps) and communications port in the configuration item.
3. Set the firmware to be updated by File name item.
4. Turn the transceiver power ON with the [P] key held down. Then, the orange LED on the transceiver lights and "PROGRAM 115200" is displayed.
5. Check the connection between the transceiver and the personal computer, and make sure that the transceiver is in the Program mode.

6. Press write button in the window. When the transceiver starts to receive data, the [LOADING] display lights.
7. If writing ends successfully, the checksum is calculated and a result is displayed.
8. If you want to continue programming other transceivers, repeat steps 4 to 7.

Note:

This mode cannot be entered if the Firmware Programming mode is set to Disable in the Programming software.

6-4. Function

1. If you press the [■] key while "PROGRAM 115200" is displayed, the display changes to "PROGRAM 19200" (The LED blinks green) to indicate that the write speed is low speed (19200 bps). If you press the [■] key again while "PROGRAM 19200" is displayed, the display changes to "PROGRAM 38400" (The LED lights red and orange alternatively). If you press the [■] key again while "PROGRAM 38400" is displayed, the display changes to "PROGRAM 57600" (The LED blinks orange). If you press the [■] key again while "PROGRAM 57600" is displayed, the display returns to "PROGRAM 115200" (The LED lights orange).
2. If you press the [▲] key while "PROGRAM 115200" is displayed, the checksum is calculated, and a result is displayed. If you press the [▲] key again while the checksum is displayed, "PROGRAM 115200" is redisplayed.

Note:

Normally, write in the high-speed mode.

7. Clone Mode

Programming data can be transferred from one transceiver to another by connecting them via their 8-pin microphone connectors. The operation is as follows (the transmit transceiver is the master and the receive transceiver is a slave).

The following data cannot be cloned.

- Tuning data
- Embedded message with password
- ESN (Electronic Serial Number) data

Note:

The following data can be cloned.

- Fleet (own)/ID (own) for FleetSync
 - Unit ID (own) for NXDN
1. Turn the master transceiver power ON with the [C] key held down. If the read authorization password is set to the transceiver, the transceiver displays "CLONE LOCK" If the password is not set, the transceiver displays "CLONE MODE".
 2. When you enter the correct password, and "CLONE MODE" is displayed, the transceiver can be used as the cloning master. The following describes how to enter the password.

REALIGNMENT

3.
 - **How to enter the password with the microphone keypad;**
If you press a key while "CLONE LOCK" is displayed, the number that was pressed is displayed on the transceiver. Each press of the key shifts the display in order to the left. When you enter the password and press the [*] key, "CLONE MODE" is displayed if the entered password is correct. If the password is incorrect, "CLONE LOCK" is redisplayed.
 - **How to enter the password with the [↵] and [↶] keys;**
If the [↵] and [↶] keys is pressed while "CLONE LOCK" is displayed, number (0 to 9) are displayd flashing. When you press the [↵] key, the currently selected number is determined. If you press the [↵] key after entering the password in this procedure, "CLONE MODE" is displayed if the entered password is correct. If the password is incorrect, "CLONE LOCK" is redisplayed.
4. Power on the slave transceiver.
5. Connect the cloning cable (Part No. E30-3382-05) to the modular microphone jacks on the master and slave.
6. Press the [↵] key on the master while the master displays "CLONE MODE" The data of the master is sent to the slave. While the slave is receiving the data, "PROGRAM" is displayed. When cloning of data is completed, the master displays "END", and the slave automatically

operates in the User mode. The slave can then be operated by the same program as the master.

7. The other slave can be continuously cloned. When the [↵] key on the master is pressed while the master displays "END", the master displays "CLONE MODE". Carry out the operation in step 4 to 6. Can not be cloned if the overwrite password is programmed to the slave.

Note:

Only the same models can be cloned together.

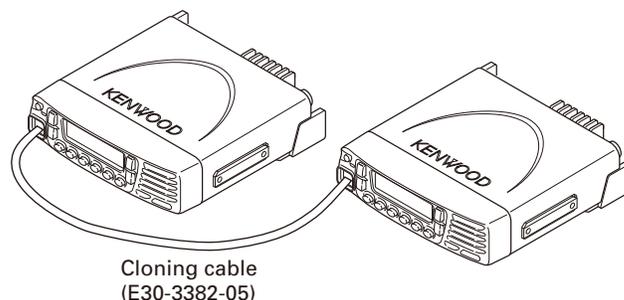

Fig. 2

8. Firmware Version Information

Turn the transceiver ON with the [▲] key held down. Then, the version is displayed during holding the [▲] key.

INSTALLATION

1. Ignition Sense Cable (KCT-46: Option)

The KCT-46 is an optional cable for enabling the ignition function. The ignition function lets you turn the power to the transceiver on and off with the car ignition key.

1-1. Connecting the KCT-46 cable to the transceiver

1. Open the KCT-46 fuse holder and insert a mini blade fuse (3A). (①)
2. While holding a clear protective cover, remove the black cap at the end of the yellow cable (ignition sense cable) of the transceiver. (②)
3. Connect the plug of the KCT-46 to the yellow cable terminal of the transceiver. (③)
4. Connect the other end of the KCT-46 to the ignition line of the car. (④)

Note: You must setup using the KPG-111D.

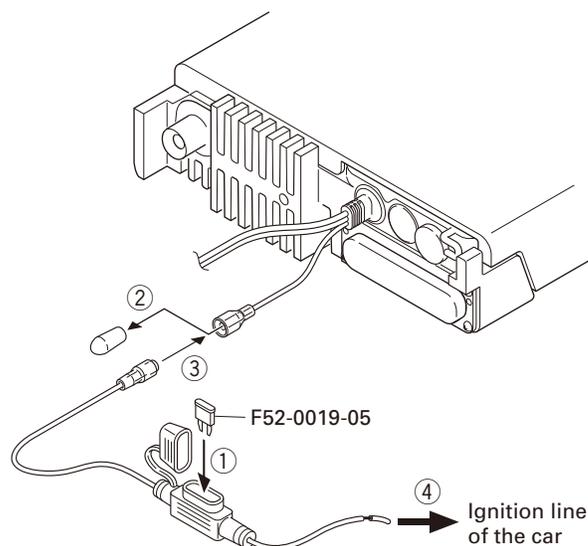

Fig. 1

INSTALLATION

2. Horn Alert/P.A. Relay Unit (KAP-2: Option)

The Horn alert (max. 2A drive), Public address and External speaker function are enabled by installing the KAP-2 in the transceiver.

2-1. Installing the KAP-2 unit in the transceiver (The kit A is not used in the KAP-2 accessories)

1. Remove the cabinet, top packing and shielding plate of the transceiver.
2. Set the KAP-2 relay unit jumper pins according to the purpose of use.
3. Remove the 6-pin jumper connector inserted in the TX-RX unit (A/2) connector (CN705). (①)
4. Insert one side of the lead wire with connector (E37-1114-05) into the relay unit connector (CN3) (②) and the other side into the TX-RX unit (A/2) connector (CN705) (③).

5. Place the relay unit at the position shown in Figure 2-2 and secure it to the chassis with a screw. (④)
6. Remove the cap on the rear of the chassis by pushing it from the inside with your finger. (⑥)
7. Pass the 6-pin connector of the cable (E37-1113-15) through the chassis hole (⑤) and insert the bush into the chassis hole.
8. Rotate the bush of the cable 90 degrees counterclockwise as viewed from the rear of the chassis. (⑥)
9. Insert the 6-pin connector of the cable into the connector (CN2) of the KAP-2 relay unit. (⑦)

Note: You must setup using the KPG-111D.

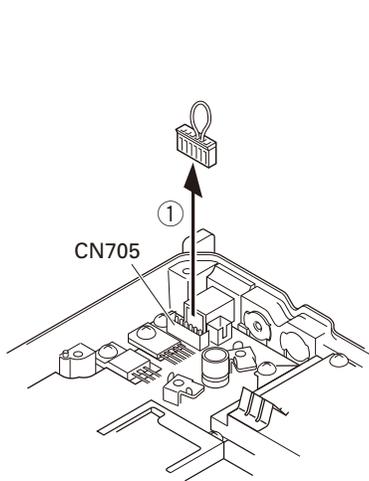

Fig. 2-1

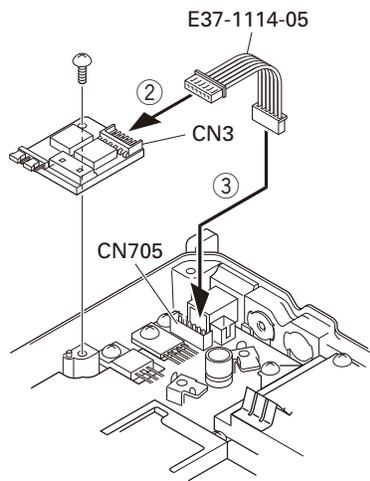

Fig. 2-2

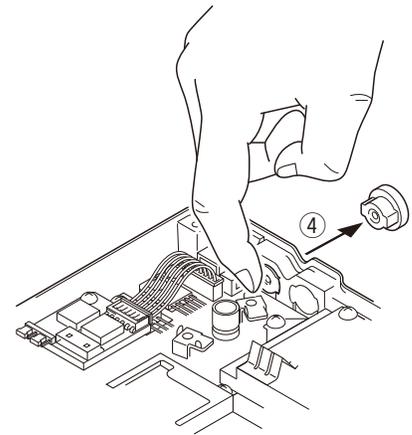

Fig. 2-3

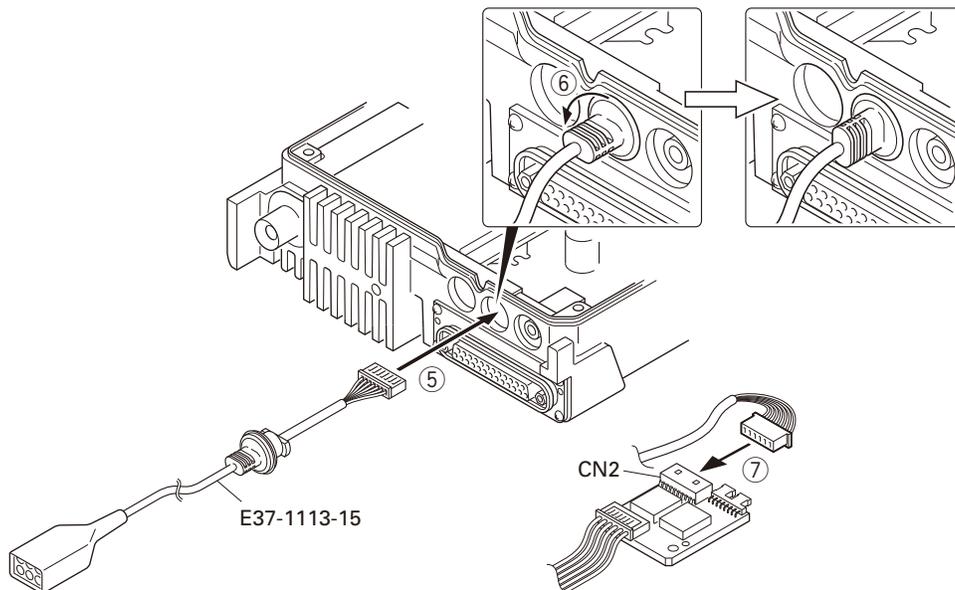

Fig. 2-4

INSTALLATION

3. Control Head Remote Kit (KRK-10: Option)

The KRK-10 remote kit is used to remotely operate the transceiver.

3-1. Installing the KRK-10 kit to the transceiver

1. Remove the front panel from the transceiver.
2. Install the KRK-10 main panel onto the transceiver.
3. Install the KRK-10 rear panel onto the front panel.
4. Connect the KRK-10 main panel to the rear panel with the cable.

■ Remove the front panel from the transceiver

1. Lift the two tabs of the panel on the bottom of the transceiver with a flat-head screwdriver (①) and remove the panel from the chassis (②).

Note: Confirm that the tabs of the speaker hardware fixture and holder is securely fitted in the front panel.

2. Remove the flat cable from the connector (CN901) of the display unit of the panel. (③)
3. Fold the black line of the flat cable (in three parts) as shown in Figure 3-2. (④, ⑤, ⑥)

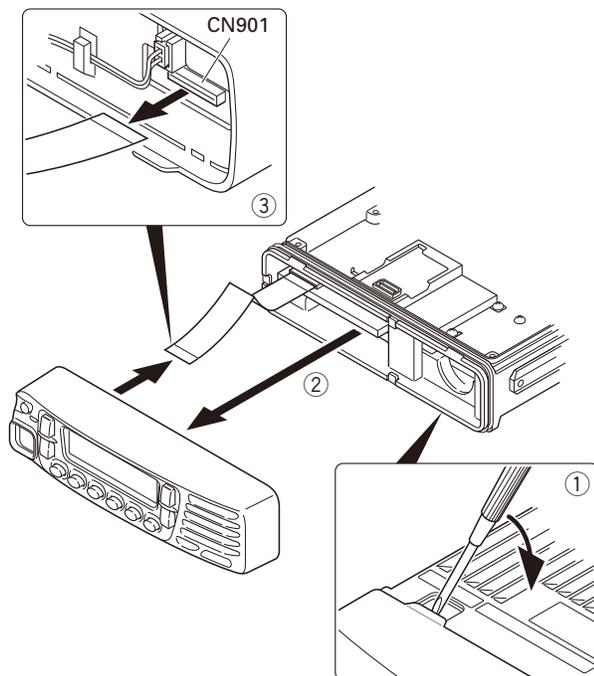

Fig. 3-1

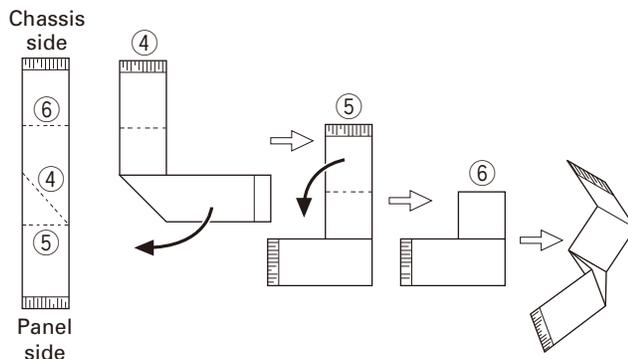

Fig. 3-2

■ Install the KRK-10 main panel onto the transceiver

4. Insert the flat cable that was removed in step 2 above into the connector (CN1) of the interface unit (A/2) of the KRK-10 main panel (A62-1101-11). (⑦)

Note: The terminal side of the flat cable must face down when inserting the flat cable into the connector.

5. Fit the main panel with four tabs onto the front of the chassis. (⑧)

Note: When installing the main panel onto the front of the chassis, hold down the flat cable with your fingers to prevent it from being caught.

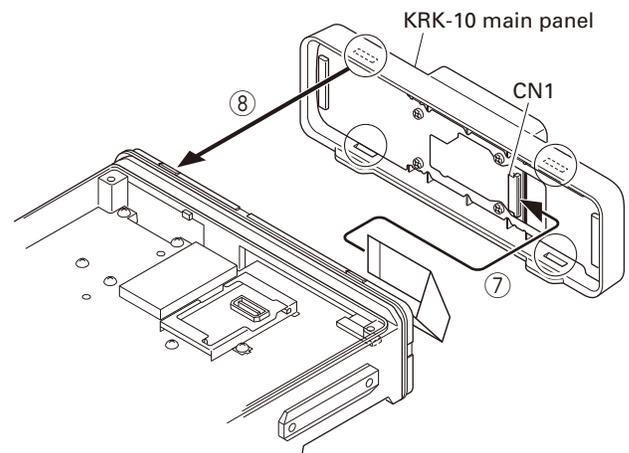

Fig. 3-3

■ Install the KRK-10 rear panel onto the front panel

6. Insert the flat cable attached to the interface unit (A/2) of the KRK-10 rear panel (A82-0056-21) into the connector (CN901) of the display unit of the panel (⑨). (The flat cable has been pre-inserted in the connector (CN2) of the rear panel at the time of shipping.)

Note: The terminal side of the flat cable must face down when inserting the flat cable into the connector.

7. Fit the four tabs of the rear panel into the front panel. (⑩)

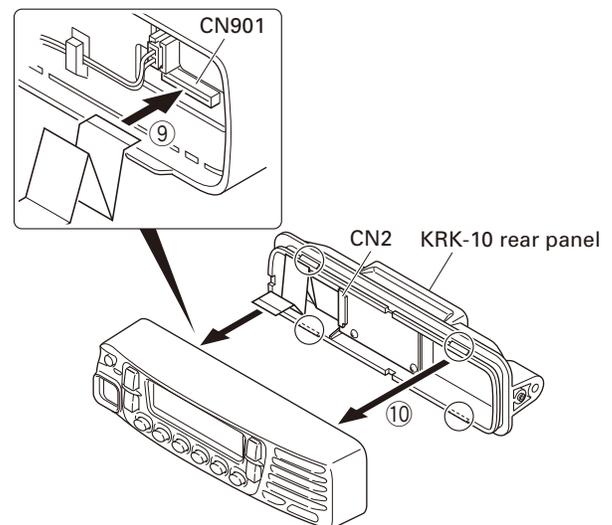

Fig. 3-4

INSTALLATION

■ Connect the KRK-10 main panel to the rear panel with the cable

8. Insert one 14-pin connector of the cable (E30-7514-15) into the connector (CN3) of the interface unit (A/2) of the main panel. (11)

Note: Insert the connector that has a sticker onto the cable to the connector of the main panel.

9. Secure the cable bush on the main panel and fit the waterproof packing (orange) (12) securely over top.

10. Install the molded cover (13) over the connector on the main panel and secure it with two screws (14).

11. Insert the other 14-pin connector of the cable into the connector (CN4) of the interface unit (B/2) of the rear panel. (15)

12. Secure the cable bush on the rear panel and fit the waterproof packing (orange) (16) securely over top.

13. Install the molded cover (17) over the connector on the rear panel and secure it with two screws (18).

Note: A cable can be connected from the left side as shown in the Figure 3-5 or from right side.

However, the 14-pin connector must be connected to correct direction.

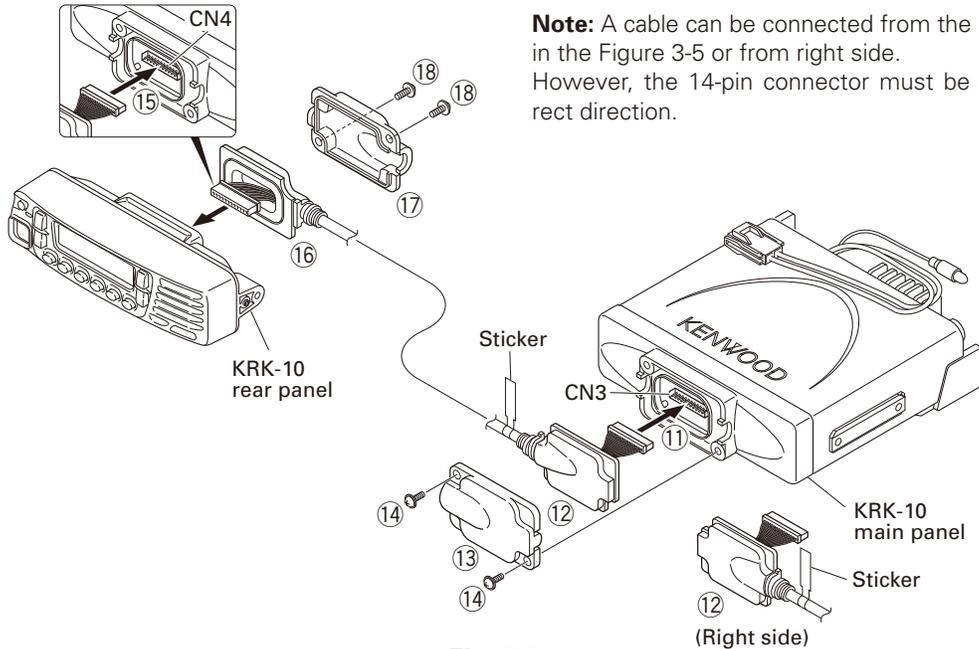

Fig. 3-5

4. Voice Guide & Storage Unit (VGS-1: Option)

4-1. Installing the VGS-1 unit in the transceiver

1. Remove the cabinet, top packing and shielding plate of the transceiver.

2. Attach two cushions to VGS-1 as shown in Figure 4. (1)

Note: Be sure not to cover the connector with the bottom cushion.

3. Insert the VGS-1 connector (CN1) into the TX-RX unit (A/2) connector (CN595). (2)

Note: You must setup using the KPG-111D.

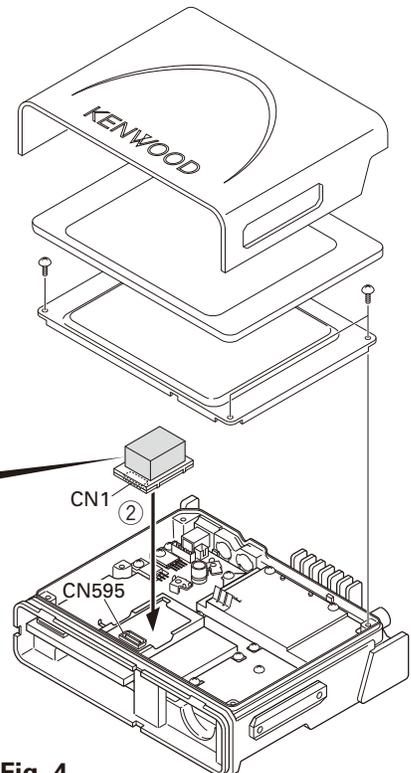

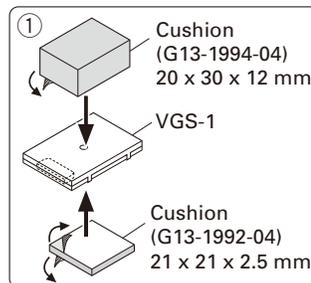

Fig. 4

INSTALLATION

5. External Speaker (Option)

5-1. KES-3

The KES-3 is an external speaker for the 3.5-mm-diameter speaker jack.

■ Connection Procedure

1. Connect the KES-3 to the 3.5-mm-diameter speaker jack on the rear of the transceiver.

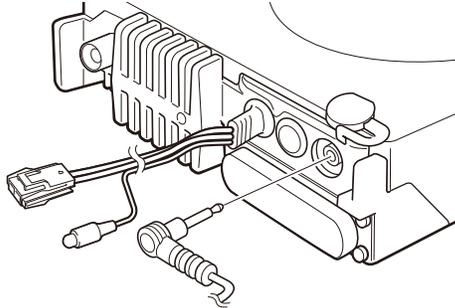

Fig. 5-1

5-2. KES-5 or KES-6

External speaker KES-5 or KES-6 can be installed for KAP-2. If KES-5 or KES-6 is installed, it can be set by changing the CN1 short pin from pins 4 and 5 to pins 5 and 6 on the KAP-2.

KAP-2 CN1 Connect	Set Up
4-5	INT. SP or KES-3
5-6	KES-5 or KES-6

When you use the KES-5 or KES-6, plug the short pin to pins 5 and 6 on the KAP-2.

When you use the INT. SP or KES-3, plug the short pin to pins 4 and 5 on the KAP-2.

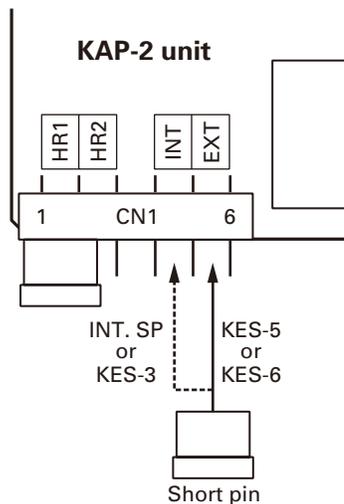

Fig. 5-2

■ Connection Procedure

Insert the crimp terminal into the Square plug supplied with the KAP-2.

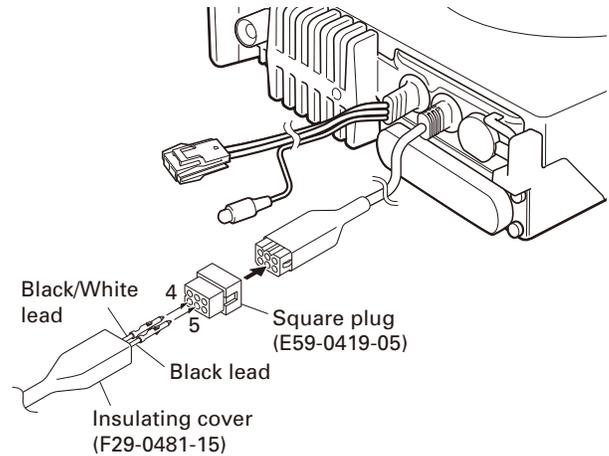

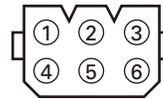

Fig. 5-3

■ KAP-2 Cable (E37-1113-15) 6-pin Connector

Pin No.	Color	Name
1	Red	HR2
2	Blue	GND
3	Yellow	OSP
4	Green	ESP
5	Brown	GND
6	Black	HR1

INSTALLATION

6. GPS Receiver Connection

6-1. Installing the GPS receiver

1. Remove the cabinet, top packing and shielding plate of the transceiver.
2. Remove the front panel from the transceiver.
3. Attach two cushions to the top of the GPS receiver.
4. Attach the GPS receiver to the shield case with two cushions as shown in Figure 6-2.
5. Solder each lead of the GPS receiver to a necessary location of each landing on the component side of the TX-RX unit (A/2).
6. Place the GPS antenna cable in the hollow at the rear of the chassis. (Fig. 6-2 ①)

Note: If the GPS receiver is installed, cut the base of the convex tab of the top packing with a pair of nippers, or similar tool. (Fig. 6-3 ②)

If the convex tab of the top packing is cut off, the water proofing property is no longer guaranteed.

Note: You must setup using the KPG-111D.

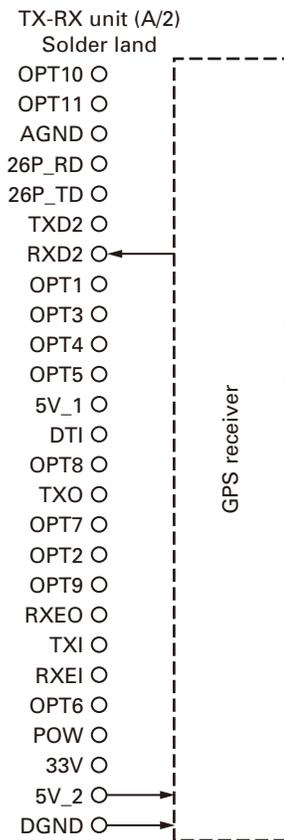

Fig. 6-1

3M Double coated cushion
No. 4016 (or No. 4416)
30 x 25 mm

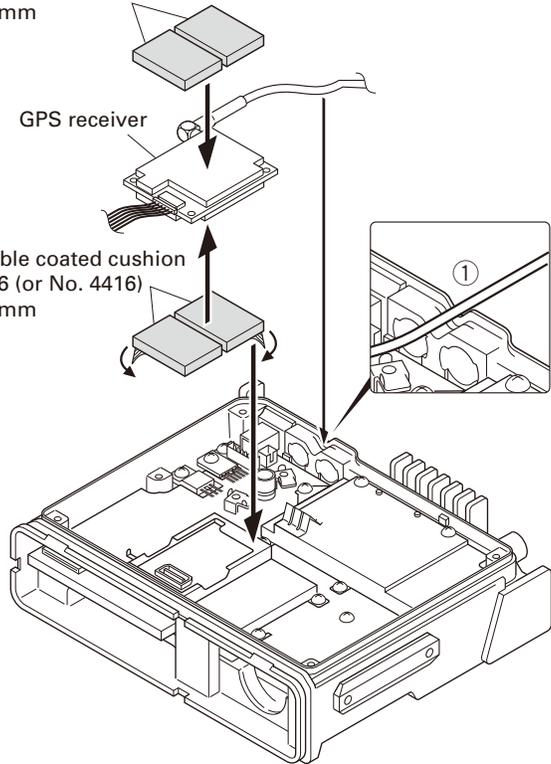

Fig. 6-2

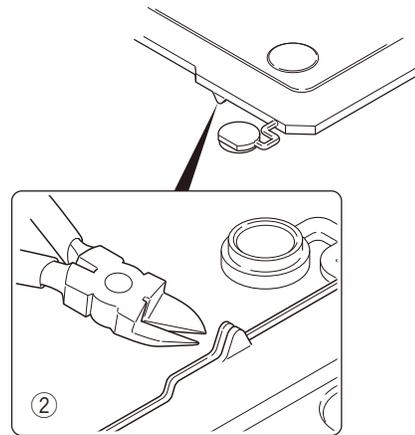

Fig. 6-3

INSTALLATION

6-2. Installing the GPS receiver together with the VGS-1

1. Remove the cabinet, top packing and shielding plate of the transceiver.
2. Remove the front panel from the transceiver.
3. Attach a cushion to the bottom of the VGS-1 as shown in Figure 6-5.
- Note:** Be sure not to cover the connector with the cushion.
4. Insert the VGS-1 connector (CN1) into the TX-RX unit (A/2) connector (CN595).
5. Perform step 3 to 6 of "6-1. Installing the GPS receiver" described on page 12.

Note: You must setup using the KPG-111D.

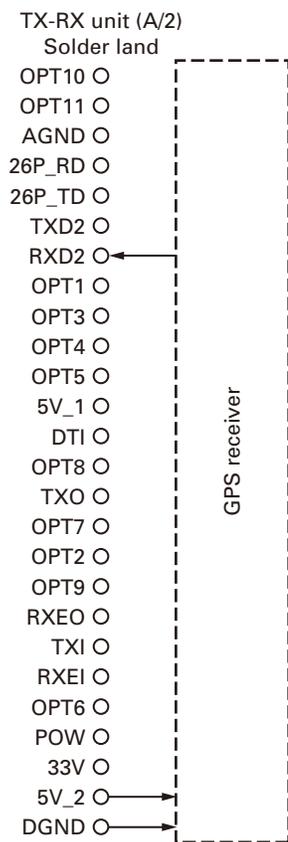

Fig. 6-4

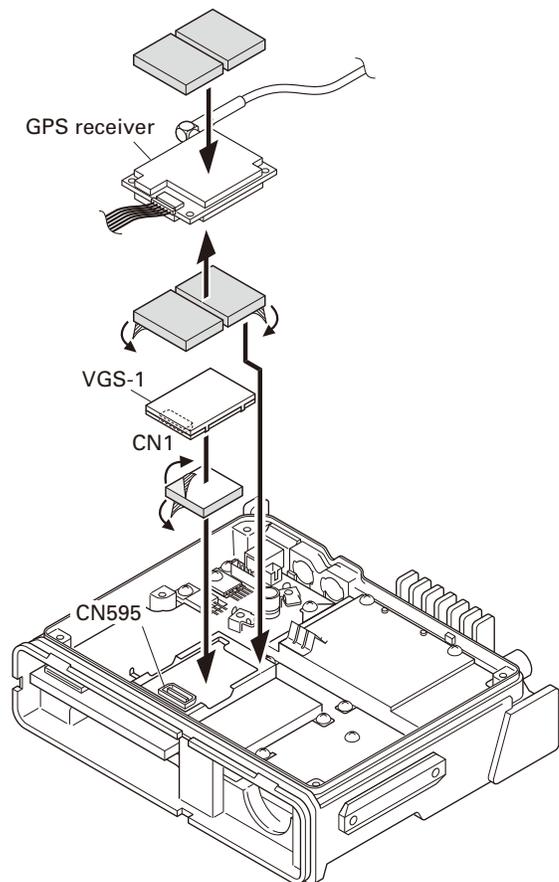

Fig. 6-5

DISASSEMBLY FOR REPAIR

1. Precautions on Disassembly

■ TX-RX PCB (TX-RX unit A/2) Disassembly

1. Remove all screws and antenna terminals on the TX-RX PCB.
2. Rotate the bush of the power supply cable 90 degrees counterclockwise as viewed from the rear of the chassis (①) and remove the power supply cable from the chassis (②).
3. When the speaker phone jack is pushed up, using your finger, from the rear of the chassis (③), the TX-RX PCB is removed from the chassis.

Note: The TX-RX PCB and D-sub PCB (TX-RX unit B/2) are connected with a flat cable. Remove them carefully.

4. Turn the TX-RX PCB over and remove the flat cable from the connector (CN600). (④)
5. Remove the TX-RX PCB from the chassis.

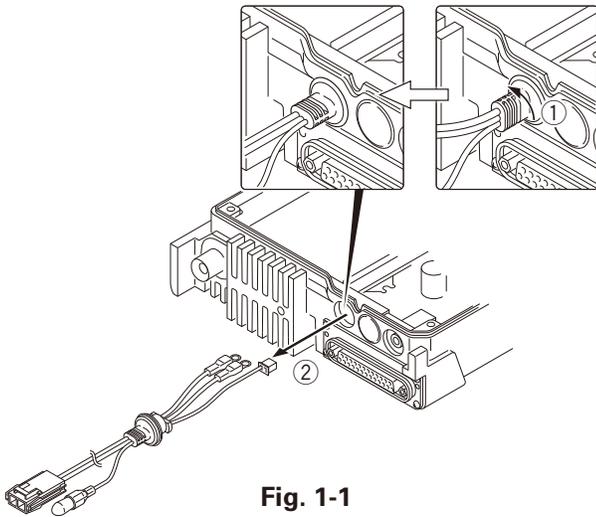

Fig. 1-1

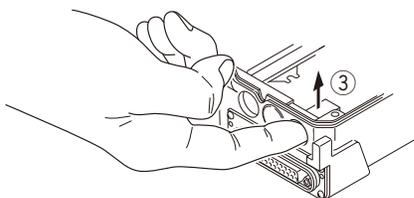

Fig. 1-2

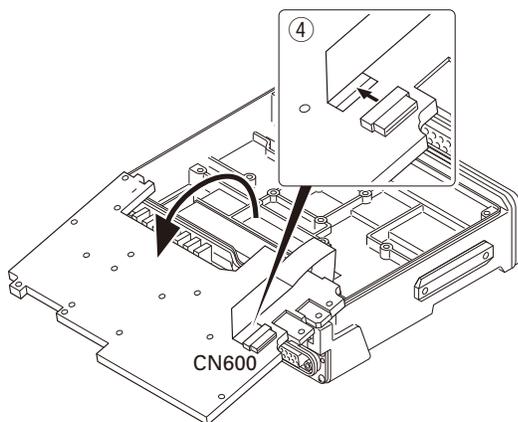

Fig. 1-3

■ Removing the speaker hardware fixture (J21-8481-03) and holder (J19-5485-12)

1. Remove the speaker lead from the holder hook. (①)
2. Remove the speaker connector from the display unit connector (CN902). (②)
3. When removing the speaker hardware fixture, insert a flat-head screwdriver at the position shown in Figure 2-1 and tilt it in the direction shown by the arrow. (③)
4. To remove the holder, insert a flat-head screwdriver into tab of the holder and tilt it in the direction shown by the arrow. (④)

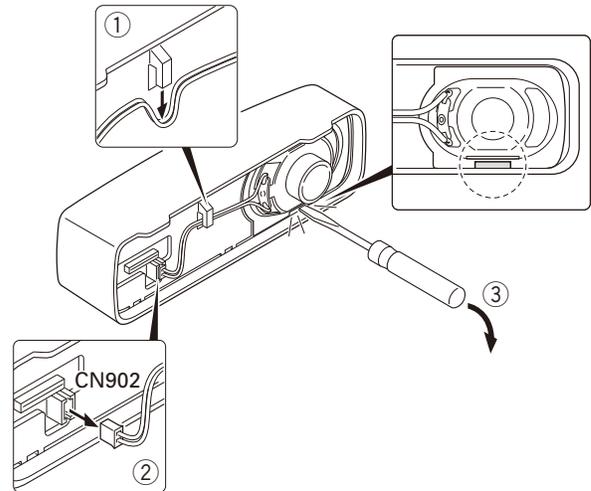

Fig. 2-1

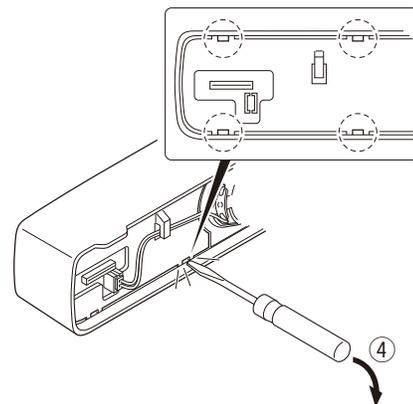

Fig. 2-2

DISASSEMBLY FOR REPAIR

2. Precautions on Reassembly

■ TX-RX PCB (TX-RX unit A/2) Reassembly

1. With the TX-RX PCB turned over, insert the flat cable from the D-sub PCB (TX-RX unit B/2) into the connector (CN600) on the TX-RX PCB.
2. Place the TX-RX PCB at its original position, tilt the TX-RX PCB and install the chassis as shown in Figure 3.

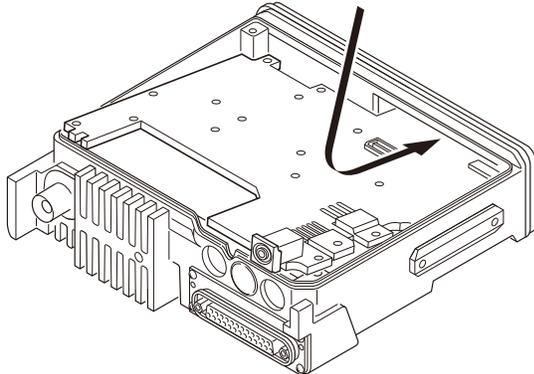

Fig. 3

■ FINAL shield case (F10-2489-13) installation procedure

1. Place the shield case on the final section of the TX-RX unit (A/2).
2. The shield case is installed on the positioning boss of the chassis by pushing down on "PUSH2" (on the shield case) while pushing "PUSH1" (stamped on two parts on the shield case) to the right.

■ Power supply cable installation procedure

1. Pass the power supply cable through the chassis hole (①) as shown in Figure 4-1 and insert the bush into the chassis hole.
2. Rotate the bush of the power supply cable 90 degrees clockwise as viewed from the rear of the chassis. (②)
3. Align the ignition sense connector (yellow) of the power supply cable around the chemical capacitor (C401) and connect it to the TX-RX unit (A/2) connector (CN403).
4. Align the + (positive) terminal of the power supply cable (red) as shown in Figure 4-2 and fix it to the terminal strip with a screw.
5. Align the - (negative) terminal of the power supply cable (black) as shown in Figure 4-2 and fix it to the terminal strip with a screw.

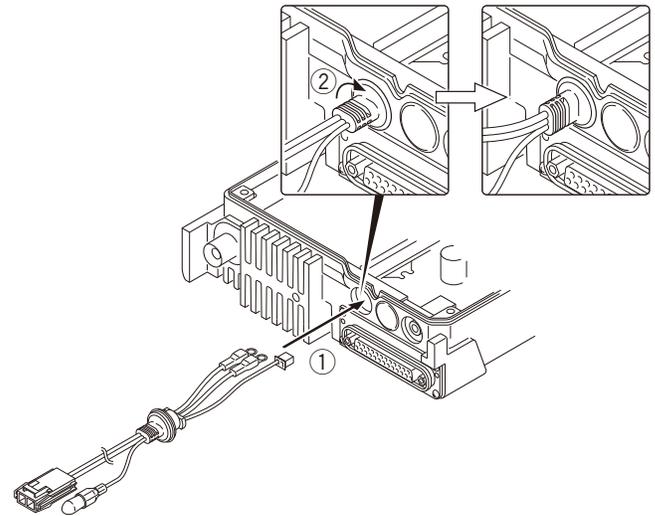

Fig. 4-1

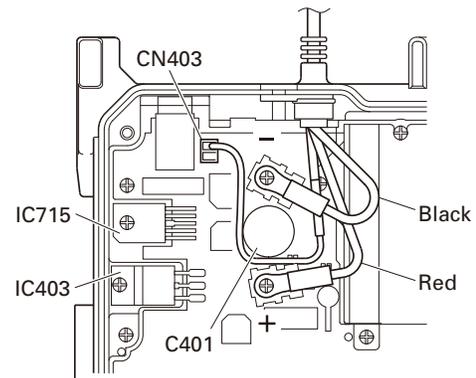

Fig. 4-2

■ Top packing installation procedure

1. Place the top packing over the shielding plate.
2. Fit the convex tab of the top packing into the hollow of the chassis. (①)
3. Fit the chassis into the groove of the top packing. (②)
Verify that the top packing is in close contact with the chassis.

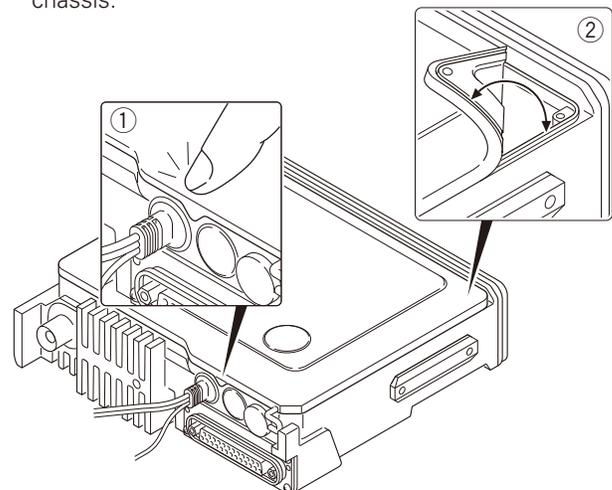

Fig. 5

DISASSEMBLY FOR REPAIR

■ D-sub cap installation procedure

To improve water resistance, fit the D-sub cap into the D-sub terminal hardware fixture of the transceiver in the following order:

1. Fit the left side (①) of the D-sub cap into the hardware fixture.
2. Fit the right side (②) of the D-sub cap into the hardware fixture.
3. Fit the center (③) of the D-sub cap into the hardware fixture.

Verify that the D-sub cap is in close contact with the hardware fixture.

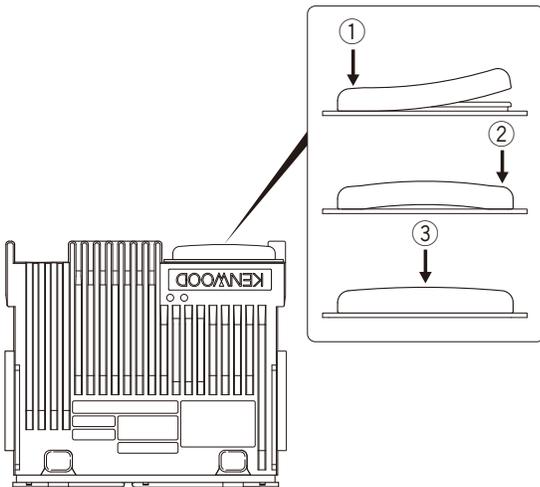

Fig. 6

■ Installing the holder (J19-5485-12) and speaker hardware fixture (J21-8481-03)

1. Insert two tabs of the holder (J19-5485-12) into the hollows in the top of the panel. (①)
2. Push the two tabs of the holder in on the opposite side of those in step 1 above and fit them into the hollow in the bottom of the panel. (②)

Note: Push in the holder until it snaps in place.

3. Install the speaker holder onto the panel. (③)

Note: To improve water resistance, fit the panel into the groove of the holder.

4. Place the speaker into the speaker holder.

Note: The speaker must not ride on the holder rib.

5. Place the spacer on the speaker.

6. Insert the hardware fixture (J21-8481-03) into the hollow of the panel as shown in Figure 7-3, then push two parts of the hardware fixture and fit it into the hollow of the top of the panel. (Fig. 7-3 ④)

Note: Push in the hardware fixture until it snaps in place.

7. Insert the speaker connector into the display unit connector (CN902).

8. Place the speaker lead on the holder hook.

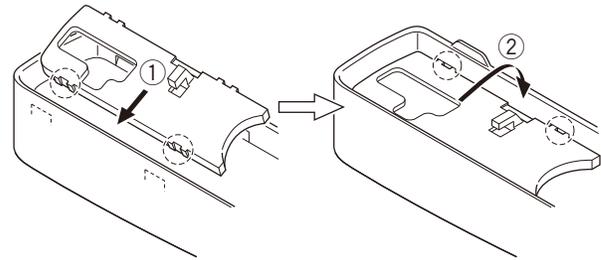

Fig. 7-1

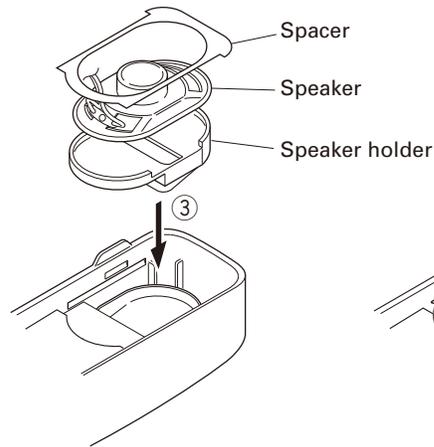

Fig. 7-2

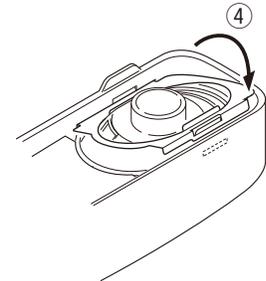

Fig. 7-3

■ Removing the lithium cell (W09-0971-05)

Insert a non-conductive screwdriver to groove of one side of the socket (CN405) and pry the lithium cell up from the socket.

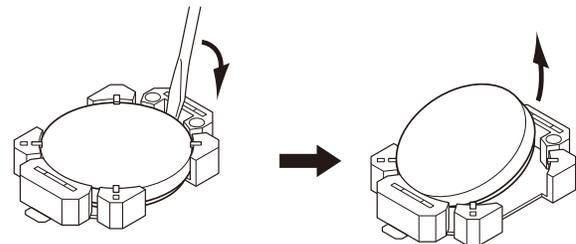

Fig. 8

■ Installing the lithium cell (W09-0971-05)

Insert a lithium cell into one side of the socket (CN405).

Push the lithium cell to insert the lithium cell into the socket.

Fig. 9

CIRCUIT DESCRIPTION

1. Overview

NX-700 is a VHF Mobile transceiver designed to operate in the frequency range of 136 to 174MHz. The unit consists of receiver, transmitter, phase-locked loop (PLL) frequency synthesizer, base band parts, power supply, and control circuits.

2. Frequency Configuration

The receiver is a double-conversion super heterodyne using first intermediate frequency (IF) of 58.05MHz and second IF of 450kHz. Incoming signals from the antenna are mixed with the local signal from the PLL circuit to produce the first IF of 58.05MHz. This is then mixed with the 57.6MHz second local oscillator output to produce the 450kHz second IF. The transmit signal frequency is generated by the PLL VCO, and modulated by the signal from the DSP. It is then amplified and fed to the antenna.

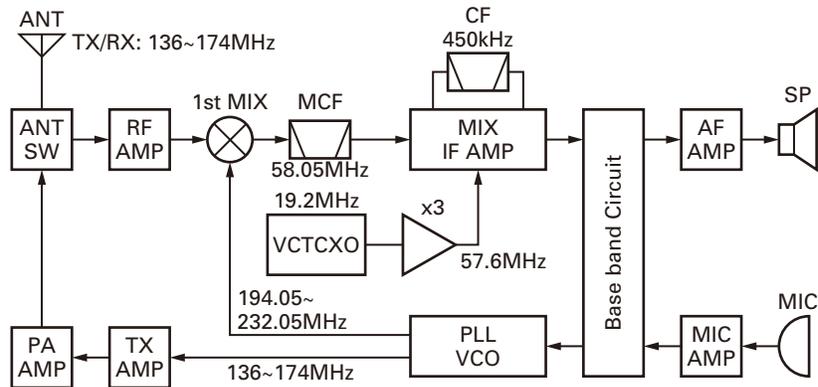

Fig. 1 Frequency configuration

3. Receiver System

3-1. RF circuit

The front-end circuit consists of former BPF (D213, D216, D217, D218), RF amplifier Q210, and latter BPF (D207, D208, D209 and D210).

The BPF covers frequency ranges 136 to 174MHz.

The latter BPF (D207, D208, D209 and D210) attenuates the unwanted signals, and sends only the necessary signal to the first mixer.

3-2. First Mixer

The signal from the BPF is heterodyned with the first local oscillator signal from the PLL frequency synthesizer circuit at the first mixer DBM (IC204) to become a 58.05MHz first intermediate frequency (IF) signal.

The first IF signal is fed through a monolithic crystal filter (XF202) to further remove spurious signals.

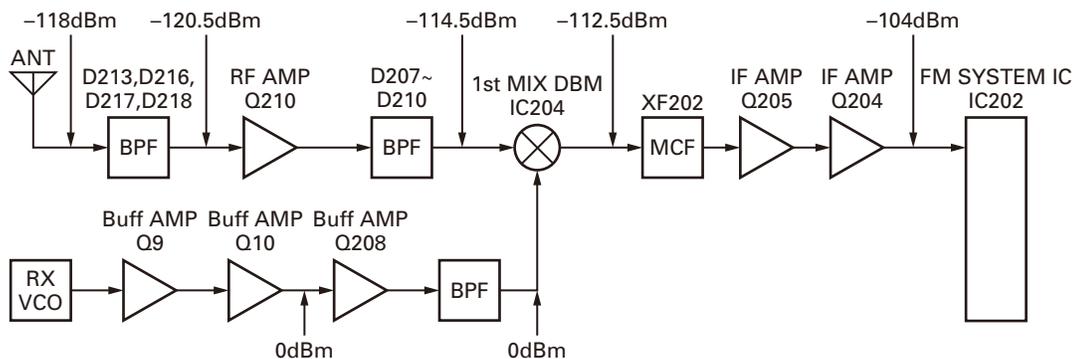

Fig. 2

CIRCUIT DESCRIPTION

3-3. IF circuit

The first IF signal is passed through a four-pole monolithic crystal filter (XF202) to reject adjacent channel signal. The filtered first IF signal is amplified by the first IF amplifier (Q204, Q205) and then applied to the IF system IC (IC202). The IF system IC provides a second mixer, AGC amplifier, and RSSI (Received Signal Strength Indicator).

The second mixer mixes the first IF signal with the 57.6MHz of second local oscillator output and produces the second IF signal of 450kHz.

The second IF signal is passed through the ceramic filter (CF201, CF202) to reject the adjacent channel signal. The filtered second IF signal is amplified by AGC amplifier.

The signal from AGC amplifier is input to AD converter (IC510) through ceramic filter (CF203) and operational amplifier (IC201 and IC704).

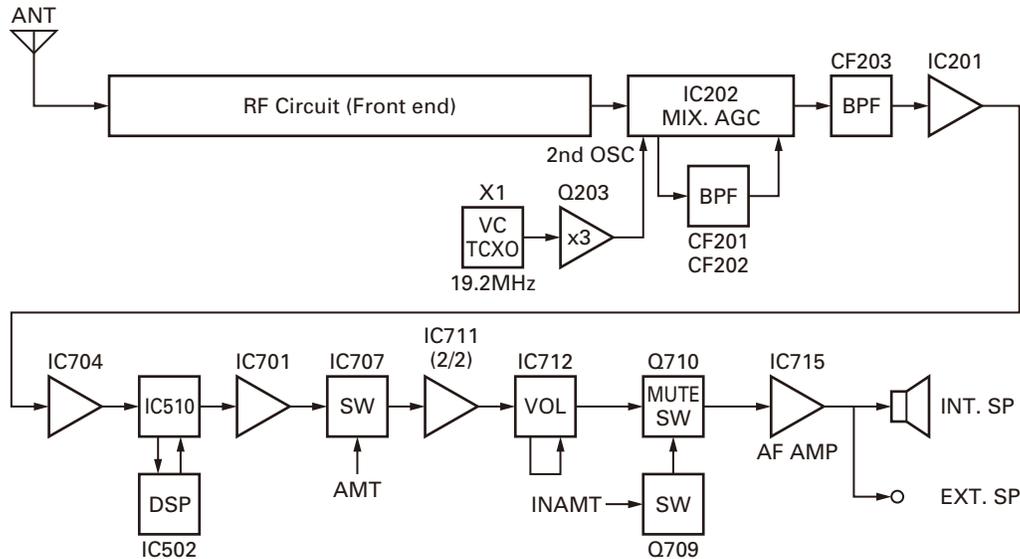

Fig. 3

3-4. Audio amplifier circuit

Audio processing (high-pass filter, low-pass filter, deemphasized and so on) at FM mode and decoding at NXDN mode are processed by DSP. Audio signal from IC510, IC502 goes through the amplifier (IC701). The signal then goes through mute switch (IC707), amplifier (IC711), and electronic volume control (IC712).

While busy, INAMT becomes High, turn switch (Q709) on and Mute switch (Q710) off, and signal is fed to AF Power Amp (IC715). While Non-busy, INAMT is become Low, turn switch (Q709) off and Mute switch (Q710) on, then there is not AF output.

3-5. Squelch Circuit

It amplifies the demodulated noise signal from IC510 after filtering through BPF circuit. Then, the amplified signal is converted to DC signal by the detection circuit. The converted signal is fed back to IC510.

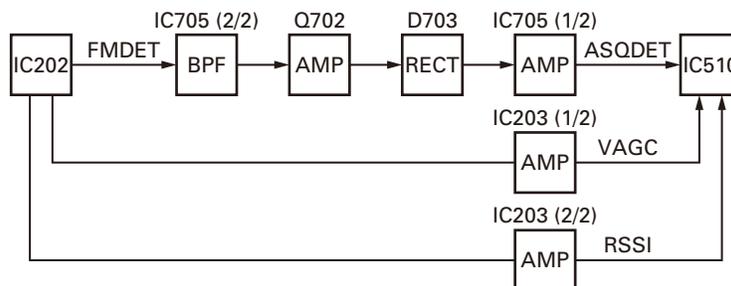

Fig. 4

CIRCUIT DESCRIPTION

4. Transmitter System

4-1. Audio Band Circuit

The signal from the microphone goes through the mute switch (Q706), the Mic-Mute signal (MM) becomes Low, then mute switch (Q706) is turned off. The signal from microphone goes through Mic-AGC (Q704, Q705, D704, D705), and goes through switch IC (IC708), and amplified by Mic-Amp IC706 (1/2), LPF IC706 (2/2) works as anti-aliasing filter.

If an optional scrambler board is installed, the switch (IC708) adjusts the signal path so that the audio signal is input to the scrambler board.

4-2. Base Band Circuit

The audio signal output from the base band circuit is converted to digital data of a sampling frequency of 48kHz. This digital data is sent to the DSP (IC502), and voice signals of 300Hz or lower and frequencies of 3kHz or higher are cut off and an audio range 300Hz to 3kHz is extracted. The audio signal is then pre-emphasized in FM mode and synthesized with the signals, such as QT and DQT, as required, and is then output from the IC510. In Digital mode, the audio signal is converted to the 4-Level FSK base band signal and output from the IC510. The DTMF and MSK base band signals are also generated by the DSP and output by the IC510.

LPF (IC702) works as smoothing filter. The DAC (IC712) assigns the base band signal to the VCO and VCTCXO (X1). At this time, the level output according to the transmit carrier is fine-adjusted according to each modulation method.

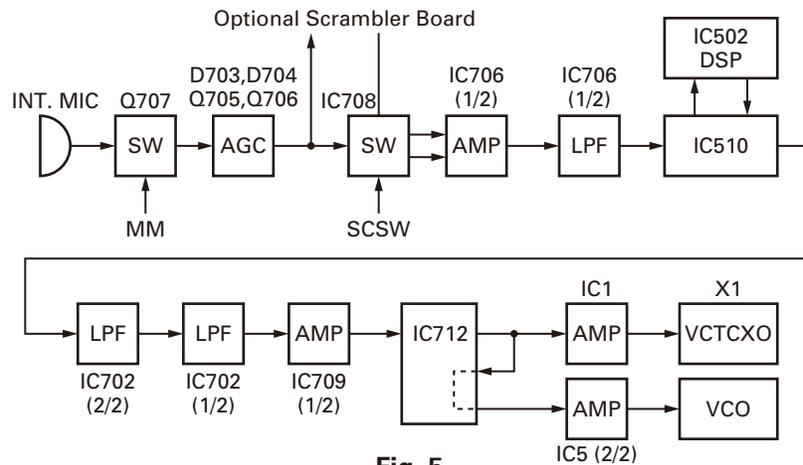

Fig. 5

4-3. Drive and Final amplifier

The transmit signal obtained from the TX VCO buffer amplifier Q9, is amplified to approximately +17dBm by the driver amplifiers Q14, Q101 and Q102.

This amplified signal is passed to the power amplifier module (power module) IC102, which consists of a MOS-FET amplifier and capable of transmission output power.

4-4. APC circuit

The Automatic transmission power control (APC) circuit stabilizes the transmitter output power at a predetermined

level by detecting the power module output with a diodes D107, D108 and D109. Diodes D107, D108 and D109 apply a voltage to DC amplifier IC103 (1/2).

IC103 (2/2) compares the APC control voltage (PC) generated by microprocessor IC510 and DC amplifier IC101 (1/2, 2/2) with the detection output voltage from IC103 (1/2) to control the V_{gg} Pin of IC102, and stabilizes transmission output.

The APC circuit is configured to protect over-current of the power module due to fluctuations of the load at the antenna end and to stabilize transmission output at voltage and temperature variations.

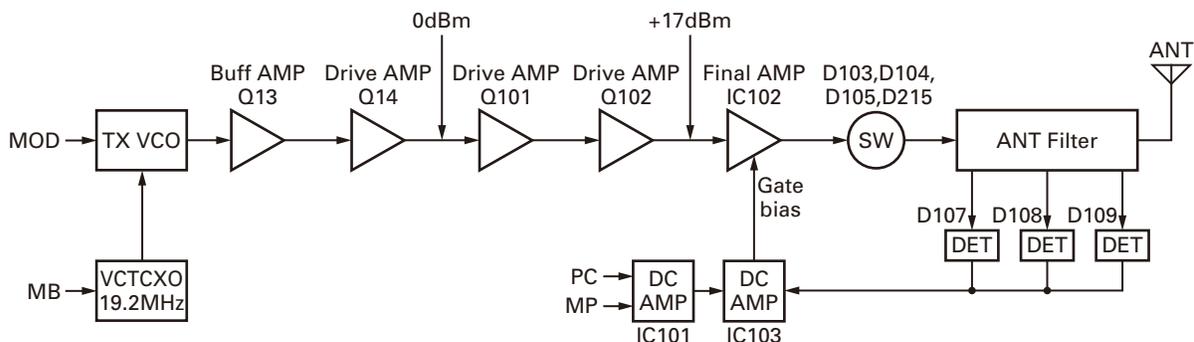

Fig. 6

CIRCUIT DESCRIPTION

5. PLL Frequency Synthesizer

5-1. VCTCXO (X1)

VCTCXO (X1) generates a reference frequency of 19.2MHz for the PLL frequency synthesizer. This reference frequency is applied to pin 9 of the PLL IC (IC3) and connected to IF circuit as a 2nd local signal through Tripler. The VCTCXO oscillation frequency is determined by DC voltage of VC terminal. The VC voltage is fixed to 1.65V by R1 and R2, and supplied to VC terminal through IC1. Modulation signal is also fed to VC terminal through IC1.

The frequency adjustment is achieved by switching the ratio of dividing frequency that is not adjusted by the DC voltage impressed to VC. The resolution of adjusting frequency is approximately 8Hz. Because twice the VCO output are input as for the input frequency of PLLIC, the sending and receiving frequency can be adjusted by approximately 4Hz resolution.

5-2. VCO

There is a RX VCO and a TX VCO.

The TX VCO (Q10) generates a transmit carrier and the RX VCO (Q9) generates a 1st local signal. For the VCO oscillation frequency, the transmit carrier is 136 to 174 MHz and the 1st local receive signal is 194.05 to 232.05MHz.

The VCO oscillation frequency is determined by one system of operation switching terminal "T/R" and two systems of voltage control terminals "C/V" and "V-assist".

The operation switching terminal, "T/R", is controlled by the control line (/T_R) output from the MCU (IC510). When the /T_R logic is low, the VCO outputs the transmit carrier and when it is high, it outputs a 1st local receive signal.

The voltage control terminals, "CV" and "V-assist", are controlled by the PLL IC (IC3) and MCU (IC510) and the output frequency changes continuously according to the applied voltage. For the modulation input terminal, "VCO MOD", the output frequency changes according to the applied voltage. This is used to modulate the VCO output. "VCO MOD" works only when "/T_R" is low.

5-3. PLL IC (IC3)

PLL IC compares the differences in phases of the VCO oscillation frequency and the VCTCXO reference frequency, returns the difference to the VCO CV terminal and realizes the "Phase Locked Loop" for the return control. This allows the VCO oscillation frequency to accurately match (lock) the desired frequency.

When the frequency is controlled by the PLL, the frequency convergence time increases as the frequency difference increases when the set frequency is changed. To supplement this, the MCU is used before control by the PLL IC to bring the VCO oscillation frequency close to the desired frequency. As a result, the VCO CV voltage does not change and is always stable at approx. 3.0V.

The desired frequency is set for the PLL IC by the MCU (IC510) through the 3-line "SDO1", "SCK1", "PCS_RF" serial bus. Whether the PLL IC is locked or not is monitored by the MCU through the "PLD" signal line. If the VCO is not the desired frequency (unlock), the "PLD" logic is low.

5-4. Doubler (Q6)

The doubler (Q6) extracts the twice harmonic component from the signal from the VCO. This twice harmonic components is then fed into PLL(IC3) through band pass filter.

Band pass filter is consists of two filter. One is for TX (L7, L15, L18) and pass band is 272.0 to 348.0MHz. The other is for RX 1st Local (L8, L12, L16) and pass band is 388.1 to 464.1MHz.

5-5. Local Switch (D101, D205)

The connection destination of the signal output from the buffer amplifier (Q14) is changed with the diode switch (D101) that is controlled by the transmission power supply, 80T, and the diode switch (D205) that is controlled by the receive power supply, 50R. If the 80T logic is high, it is connected to a send-side pre-drive (Q101). If the 80T logic is low, it is connected to a local amplifier (Q208).

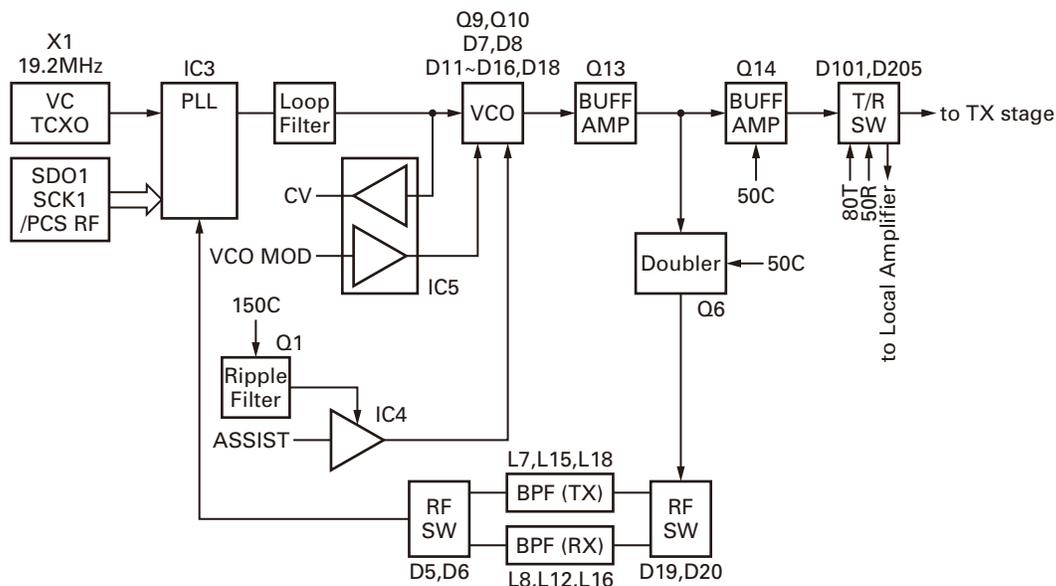

Fig. 7

CIRCUIT DESCRIPTION

6. Control Circuit

The control circuit consists of MCU (IC510) and its peripheral circuits. IC510 mainly performs the following;

- 1) Switching between transmission and reception by PTT signal input.
- 2) Reading system, zone, frequency, and program data from the memory circuit.
- 3) Sending frequency program data to the PLL.
- 4) Controlling squelch on/off by the DC voltage from the squelch circuit.
- 5) Controlling the audio mute circuit by decode data input.

6-1. MCU

The MCU (IC510) is 32bit RISC processor, equipped with peripheral function and ADC/DAC.

This MCU operates at 18.432MHz clock and 3.3V /1.5V DC. Controls the flash memory, SRAM, DSP, the receive circuit, the transmitter circuit, the control circuit, and the display circuit and transfers data to or from an external device.

6-2. Memory Circuit

Memory circuit consists of the MCU (IC510) and the SRAM (IC503), the flash memory (IC501). The flash memory has capacity of 32Mbit that contains the transceiver control program for the MCU and stores the data. It also stores the data for transceiver channels and operating parameter that are written by the FPU. This program can be easily written from external devices. The SRAM has capacity of 1Mbit that contains work area and data area.

■ Flash memory

Note: The flash memory stores the data that is written by the FPU (KPG-111D), tuning data (Deviation, Squelch, etc.), and firmware program.

■ SRAM (static memory)

Note: The SRAM has temporary data area and work area.

When the power supply is off, it is backed up by an internal secondary lithium battery. Therefore, the save data does not break.

■ Real-time clock

The clock function is based on real-time clock IC (IC504). When the power supply is off, it is backed up by an internal secondary lithium battery

6-3. Display Unit

The display unit is composed of the MCU (IC911) and the memory IC (IC913), and the LCD & Key backlight etc.

The LCD Ass'y (with LCD Driver) is controlled using the bus lines on the connector (CN905) of the display unit. It corrects the LCD contrast voltage using IC909.

6-4. Key Detection Circuit

Keys are detected using Key scan circuit in IC911. The /KI* and KO* signals that are normally pulled up go low when any key is pressed.

6-5. DSP

The DSP circuit consists of a DSP (IC502) and processes the base band signal. The DSP operates on an external clock of 18.432MHz (the same as the IC510), the I/O section operates at 3.3V and the core section operates at 1.5V. The DSP carries out the following processes:

- 4Level FSK processing
- Analog FM pre-emphasis/de-emphasis
- Vocoder processing between audio codec and modulation/demodulation
- CAI processing, such as error correction encoding
- QT/DQT encoding/decoding
- DTMF encoding/decoding
- MSK encoding/decoding
- 2TONE encoding/decoding
- Compressor/expander processing
- Voice scrambler processing
- Transmit/receive audio filtering processing
- Microphone amplifier AGC processing
- Audio mute processing
- Modulation level processing

7. Power Supply Circuit

+B is connected to Final amplifier and DC/DC converter IC (IC405). IC405 regulates +B voltage to 5.0V (50M). 50M operates whenever +B is supplied. IC402 (33M), IC408 (33A) and IC409 (15M) are enabled while the 50M are operating.

33M and 15M provide the power to MCU, DSP, and Flash memory. At this time MCU starts working. Voltage detector IC (IC401) watches +B voltage. If +B voltage is higher than 8.6V, IC401 (/BINT) outputs High. If the /BINT signal is high, Q404 (SB SW) is turned on by SBC signal from MCU. (High: SB=ON, Low: SB=OFF). When the SB is turned on, IC403 (80C), IC404 (50C), IC406 (33C), IC407 (33GPS) and IC410 (150C) start working. Q416 and Q412 are controlled by SBC signal. If the SBC signal becomes High, Q416 (33A-2) operates and Q412 (50MC SW) are turned on.

The MCU controls the TXC signal to High during transmission to supply power (80T) for transmission circuit. The MCU controls the signals (RXC) to High during reception to supply power (80R, 50R) for reception circuit.

When the MCU detects the PSW (Power switch) signal, IGN (Ignition sense) signal or /BINT signal, it controls the SBC signal to Low, and turns the transceiver power (SB) off. When D401 and Q401 detect over-voltage condition, they turns Q404 (SB SW) off. But the MCU still works.

If +B is not provided to the transceiver, the power is provided to SRAM and RTC through the secondary battery connected with CN405.

CIRCUIT DESCRIPTION

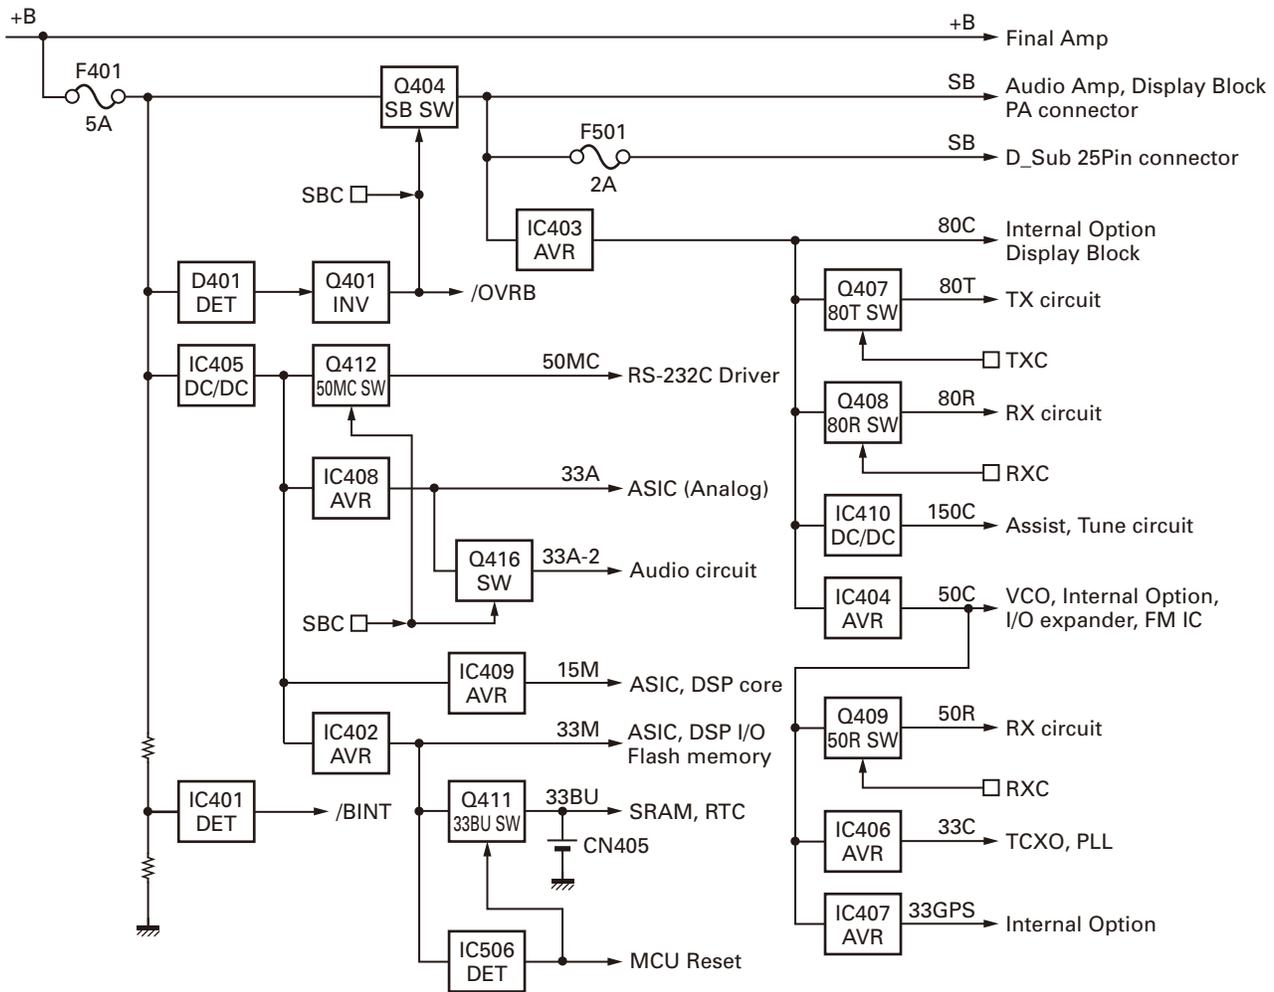

Fig. 8

8. Signaling Circuit

8-1. Encode (QT/DQT/DTMF/MSK/2TONE)

Each signaling data signal of QT, DQT, DTMF and MSK is generated by the DSP circuit, superposed on a modulation signal and output from IC510. The modulation balance of the QT/DQT signal is adjusted by the D/A converter (IC712) and the resulting signal is routed to the modulation input of the VCO and VCTCXO (X1). The each deviation of the TX QT, DQT, DTMF and MSK tone is adjusted by changing the output level of the IC510 and the resulting signal is routed to VCO and VCXO. The RX DTMF tone is routed to the receive audio signal system, and is output from the speaker.

8-2. Decode (QT/DQT/DTMF/2TONE/MSK)

The audio signal is removed from the FM detection signal sent to the DSP circuit and the resulting signal is decoded.

9. Compaander Circuit

The term "compander" means compressor and expander. The compander reduces noise by utilizing a compressor and an expander. The NX-700 contains DSP (IC502) to perform this operation. The NX-700 compander can be turned on or off using the FPU.

• Voltage rating

2nd word \ 1st word	A	B	C	D	E	F	G	H	J	K	V
0	1.0	1.25	1.6	2.0	2.5	3.15	4.0	5.0	6.3	8.0	-
1	10	12.5	16	20	25	31.5	40	50	63	80	35
2	100	125	160	200	250	315	400	500	630	800	-
3	1000	1250	1600	2000	2500	2150	4000	5000	6300	8000	-

• Chip capacitors

- (EX) $\frac{C}{1} \frac{C}{2} \frac{73}{3} \frac{F}{4} \frac{SL}{5} \frac{1H}{6} \frac{000}{7} \frac{J}{8}$ Refer to the table above.
- 1 = Type
 - 2 = Shape
 - 3 = Dimension
 - 4 = Temp. coefficient
 - 5 = Voltage rating
 - 6 = Value
 - 7 = Tolerance
- (Chip) (CH, RH, UJ, SL)
- (EX) $\frac{C}{1} \frac{K}{2} \frac{73}{3} \frac{F}{4} \frac{F}{5} \frac{1H}{6} \frac{000}{7} \frac{Z}{8}$
- (Chip) (B, F)

• Dimension

Chip capacitor

Code	L	W	T
Empty	5.6±0.5	5.0±0.5	Less than 2.0
A	4.5±0.5	3.2±0.4	Less than 2.0
B	4.5±0.5	2.0±0.3	Less than 2.0
C	4.5±0.5	1.25±0.2	Less than 1.25
D	3.2±0.4	2.5±0.3	Less than 1.5
E	3.2±0.2	1.6±0.2	Less than 1.25
F	2.0±0.3	1.25±0.2	Less than 1.25
G	1.6±0.2	0.8±0.2	Less than 1.0
H	1.0±0.05	0.5±0.05	0.5±0.05

Chip resistor

Code	L	W	T
E	3.2±0.2	1.6±0.2	1.0
F	2.0±0.3	1.25±0.2	1.0
G	1.6±0.2	0.8±0.2	0.5±0.1
H	1.0±0.05	0.5±0.05	0.35±0.05

• Rating wattage

Code	Wattage	Code	Wattage	Code	Wattage
1J	1/16W	2C	1/6W	3A	1W
2A	1/10W	2E	1/4W	3D	2W
2B	1/8W	2H	1/2W		

RESISTORS

• Chip resistor (Carbon)

- (EX) $\frac{R}{1} \frac{D}{2} \frac{73}{3} \frac{E}{4} \frac{B}{5} \frac{2B}{6} \frac{000}{7} \frac{J}{8}$
- (Chip) (B, F)

• Carbon resistor (Normal type)

- (EX) $\frac{R}{1} \frac{D}{2} \frac{14}{3} \frac{B}{4} \frac{B}{5} \frac{2C}{6} \frac{000}{7} \frac{J}{8}$

- 1 = Type
- 2 = Shape
- 3 = Dimension
- 4 = Temp. coefficient
- 5 = Rating wattage
- 6 = Value
- 7 = Tolerance

EXPLODED VIEW

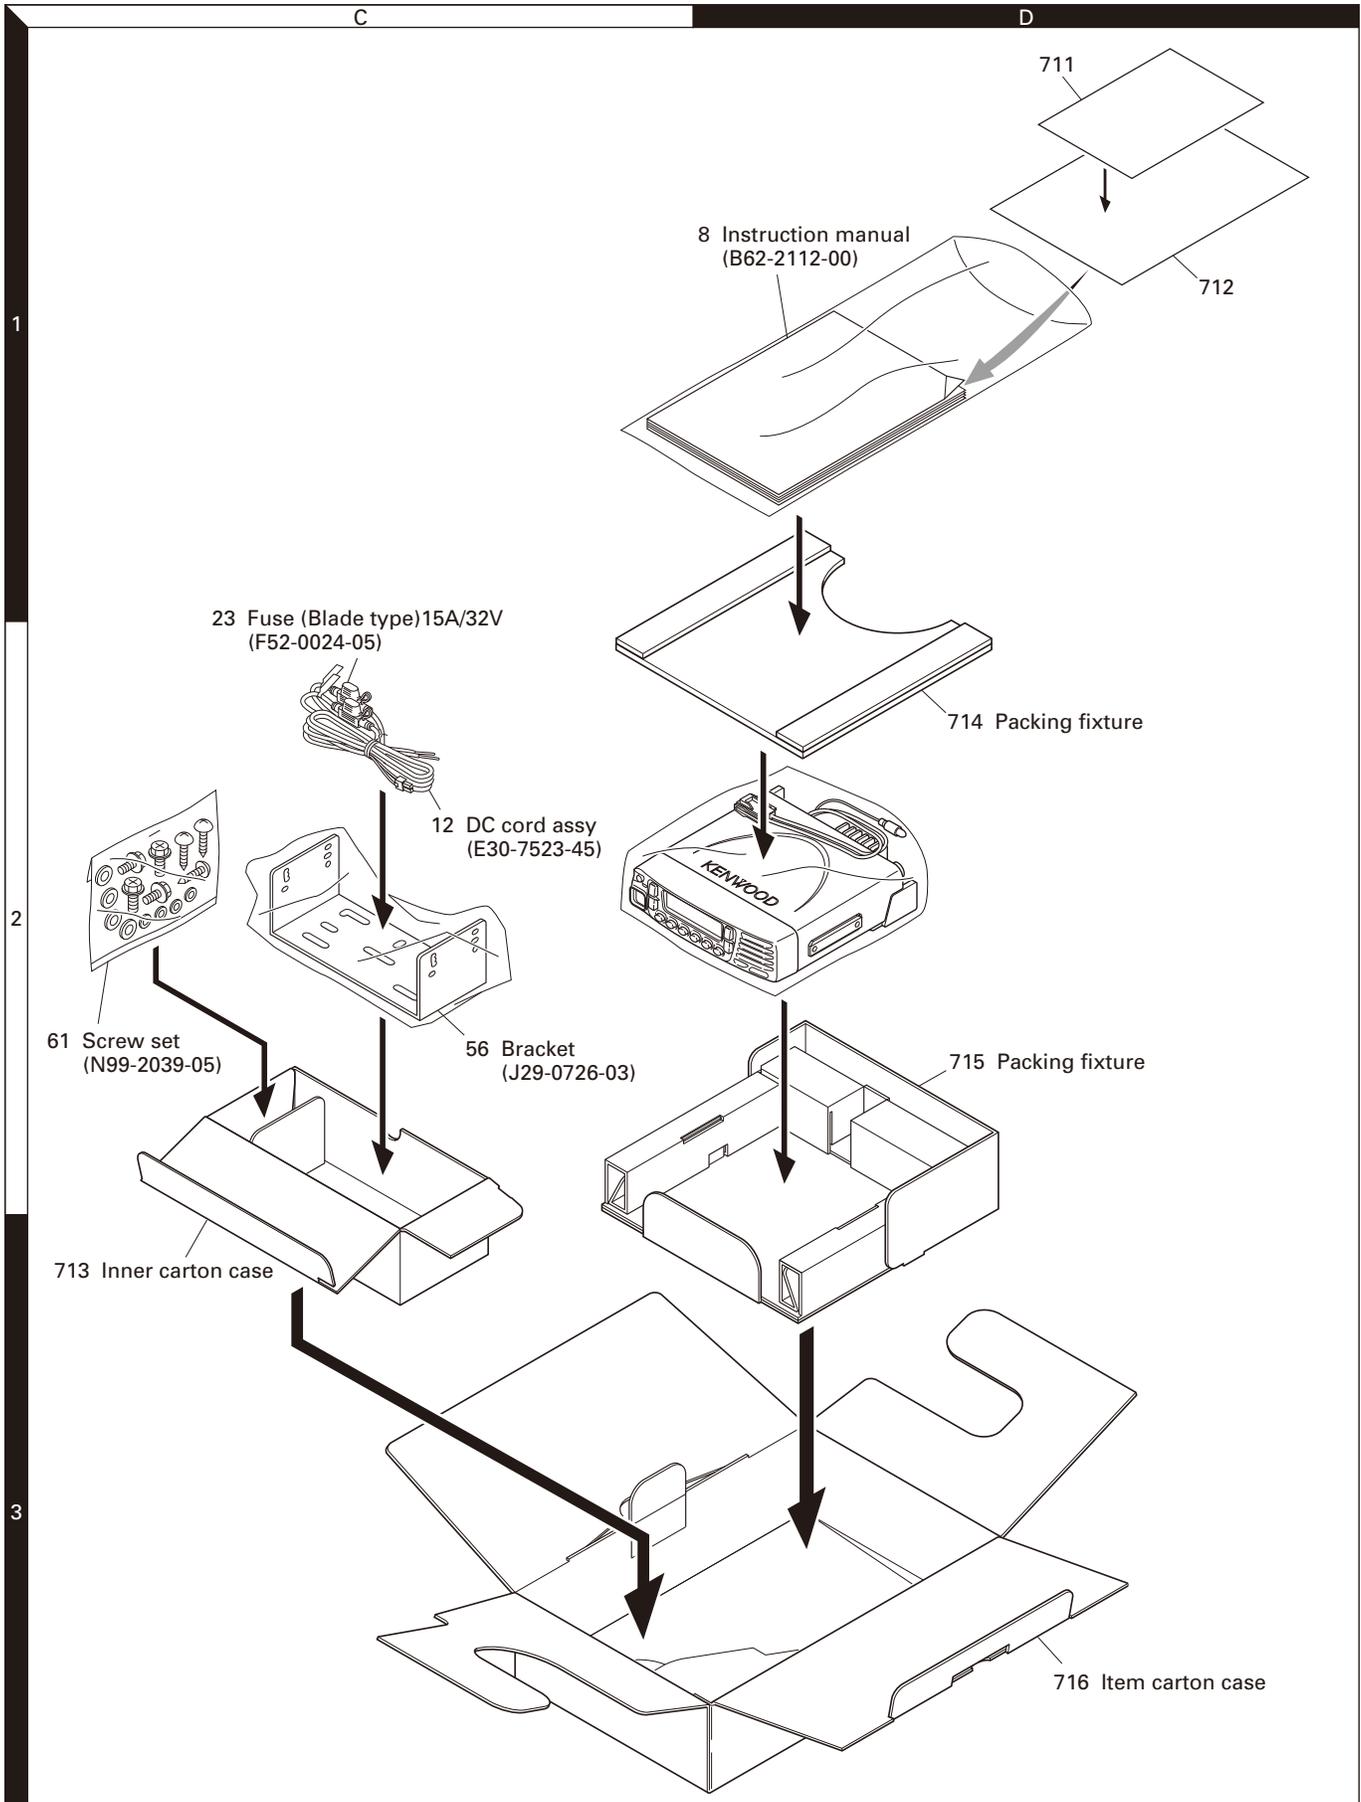

- A : N09-2292-05
 B M3 x 8 : N67-3008-48
 C M2.6 x 6 (Br-Tap) : N87-2606-43
 D M2.6 x 8 (Br-Tap) : N87-2608-48

Parts with the exploded numbers larger than 700 are not supplied.

If a part reference number is listed in a box on the exploded view of the PCB (for example, IC123), that part does not come with the PCB. These parts must be ordered separately.

PACKING

Parts with the exploded numbers larger than 700 are not supplied.

TROUBLE SHOOTING

Fault diagnosis of the BGA (Ball Grid Array) IC

Overview: A flowchart for determining whether or not the transceiver can be powered on (the LCD does not function even if the power switch is turned on) due to broken BGA parts.

BGA parts: ASIC (IC510), DSP (IC502), FLASH (IC501), SRAM (IC503)

When the BGA IC is problematic, please bring the printed circuit board (X57-7742-71) in for service. Various ESN/default adjustment values are written on the printed circuit board for service. Additionally various ESN stickers are included. The power module (RA60H13171123), short connector (E37-1180-05) and button type lithium battery (W09-0971-05) do not belong to the printed circuit board for service. Please use the part which has been attached to the printed circuit board. After the printed circuit board has been readjusted, please attach any ESN stickers to the chassis. When "ESN Validation" is used with NXDN Trunking, you must modify the ESN register.

● Checking power supply voltage

Checking voltage	
Points to be checked	Normal voltage
33M IC402 (5 pin)	3.3V
15M IC409 (5 pin)	1.5V
33A IC408 (5 pin)	3.3V
33BU D411 (Cathode side)	3.3V

Power supply of each device is connected through the coil.

33M: L903, 15M: L511, 33A: R603
[DSP]
33M: L503, 15M: L502
[FLASH]
33M: L501
[SRAM]
33BU: L522

When an abnormal value is confirmed.

Checking for an abnormal point	
33M has an abnormal voltage. [ASIC] Remove L508 to check the voltage of the 33M. If the voltage becomes normal, the ASIC is broken. [DSP] Remove L503 to check the voltage of the 33M. If the voltage becomes normal, the DSP is broken. [FLASH] Remove L501 to check the voltage of the 33M. If the voltage becomes normal, the FLASH is broken.	15M has an abnormal voltage. [ASIC] Remove L511 to check the voltage of the 15M. If the voltage becomes normal, the ASIC is broken. [DSP] Remove L502 to check the voltage of the 15M. If the voltage becomes normal, the DSP is broken.
33A has an abnormal voltage. [ASIC] Remove R603 to check the voltage of the 33A. If the voltage becomes normal, the ASIC is broken.	33BU has an abnormal voltage. [SRAM] Remove L522 to check the voltage of the 33BU. If the voltage becomes normal, the SRAM is broken.
If the voltage is not corrected, there is a problem other than the BGA parts.	

● Checking the clock

Checking the clock	
Points to be checked	Normal voltage (3.3V)
18.432MHz ASIC side R569	18.432MHz
DSP side R511	18.432MHz
32.768kHz IC504 (1 pin) or R545	32.768kHz

When a normal value is confirmed.

When an abnormal value is confirmed.

● Checking the Reset/Control signal

Checking the control signal input to the ASIC	
Points to be checked	Normal voltage
RST (RESET) IC506 (4 pin)	3.3V
/BINT IC401 (1 pin)	3.3V
/OVRB D403 (Cathode side)	3.3V

When a normal value is confirmed.

When an abnormal value is confirmed.

Checking the ASIC input switch signal	
*Each signal is not masked by the setting of the FPU. The POWER key is pressed and held.	
Points to be checked	Confirmed voltage
/PSW (R619) The ignition key is kept ON.	0V
/IGN (R618)	0V

When a normal value is confirmed.

When an abnormal value is confirmed.

● Checking the output signal from the ASIC

Points to be checked	Normal voltage
/FRST R509	3.3V

When a normal value is confirmed.

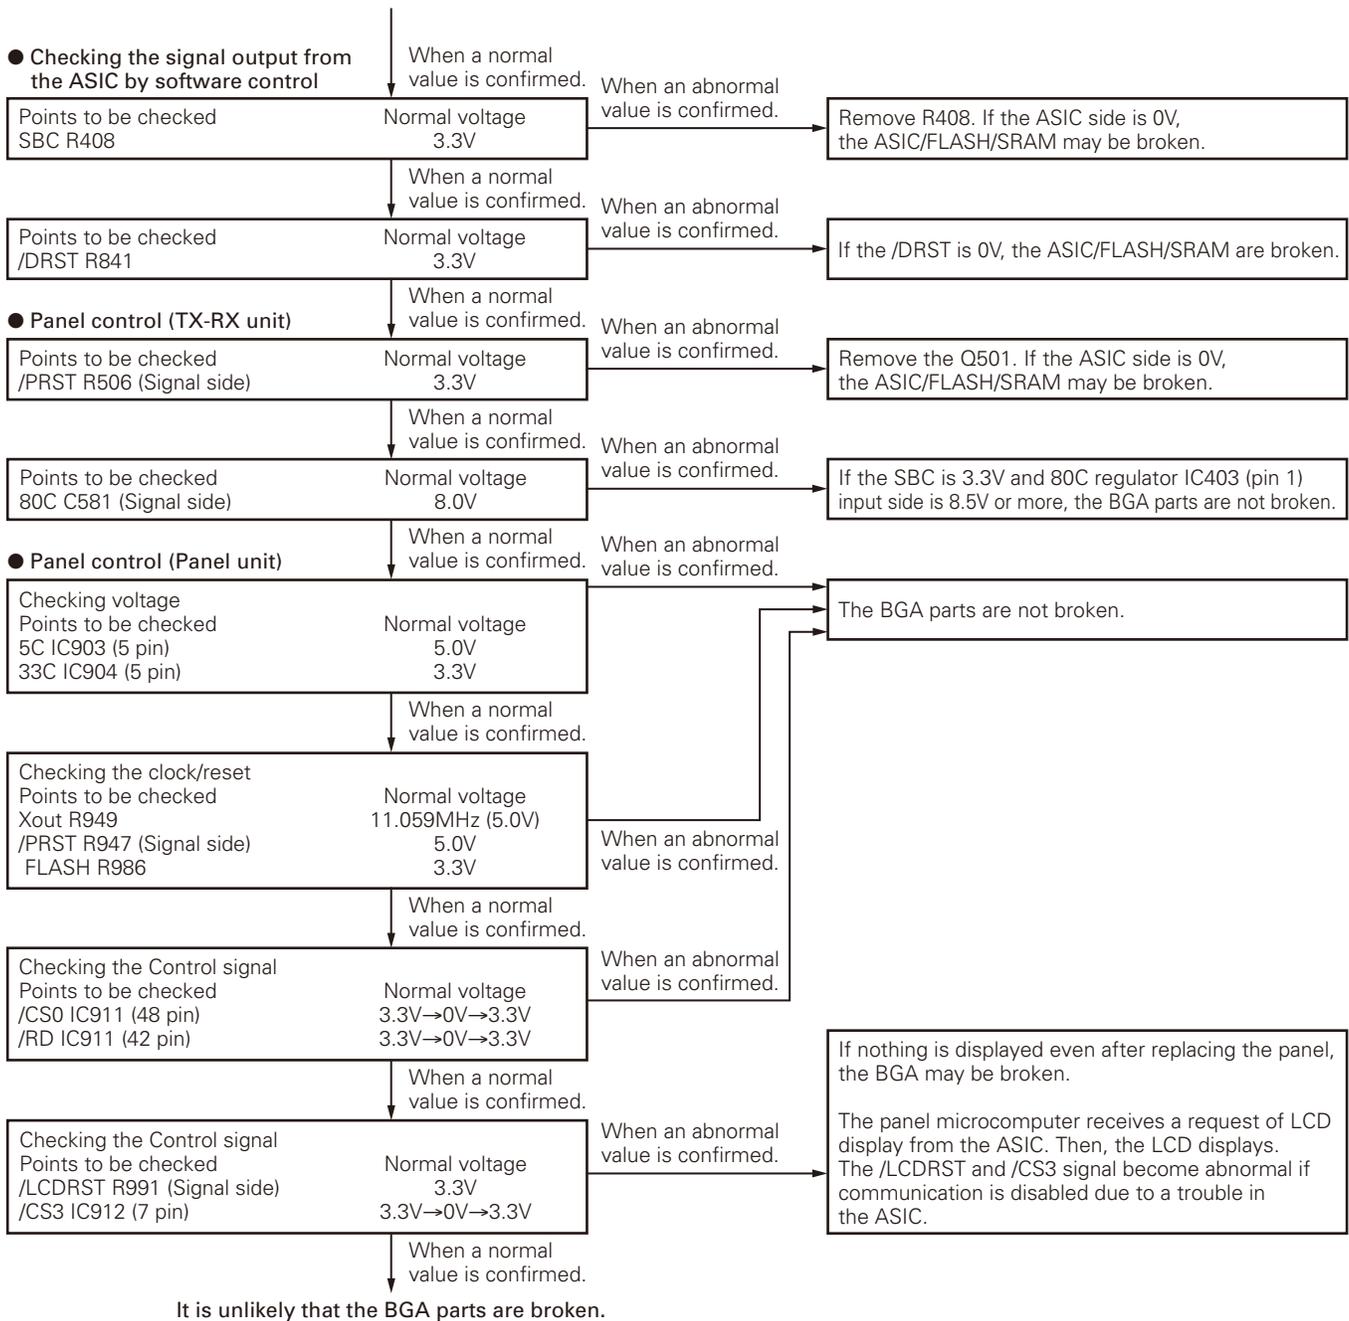

When an abnormal value is confirmed.

Remove the R569, R511 and R545. If it oscillates normally, the DSP and ASIC may be broken.

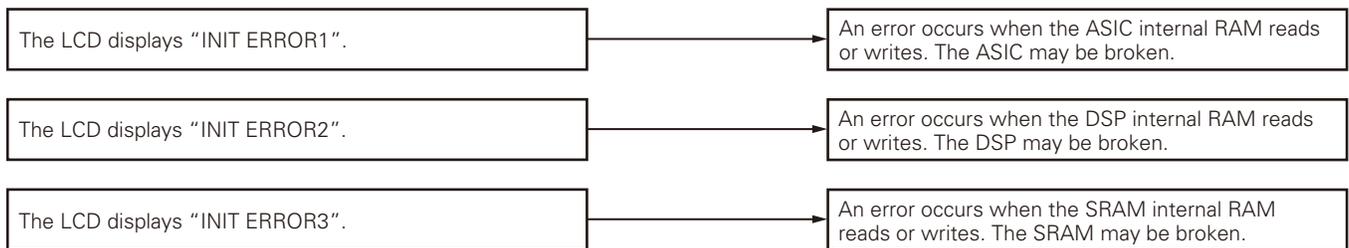

The BGA parts are not broken.

If the /FRST is always 0V, the ASIC is broken.
If the /FRST repeats 3.3V and 0V at intervals, the ASIC, FLASH and SRAM may be broken.

TROUBLE SHOOTING

● **When an error display appears on the LCD.**

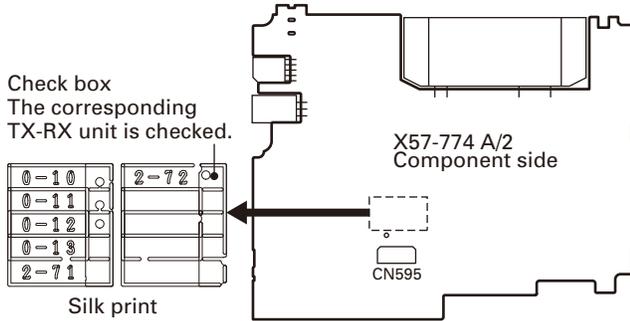

TROUBLE SHOOTING

Replacing TX-RX Unit

■ TX-RX Unit Information

Model Name	Original TX-RX Unit Number	For Service TX-RX Unit Number
NX-700 (E)	X57-7742-71	X57-7742-72

■ Method of confirming "Original TX-RX unit" and "Service TX-RX Unit"

■ Supplied Accessories of "Service TX-RX Unit"

Item (Including Parts Number)	Quantity
TX-RX Unit	1
Kenwood ESN Label	1
NXDN ESN Label	1
Product Number Label	1
MPT ESN Label	1
Addendum (B59-2576-XX)	1

■ "Service TX-RX Unit" Data

The following data is written on the service unit:

- Firmware
- FPU Data
- Various Adjustment Data
- Kenwood ESN ("S" is given after the model name.)
- NXDN ESN / Product number

■ Printed Circuit Board Data

The following data is written on the printed circuit board:

Data Type	Description
Firmware	NX-700 Firmware.
FPU Data (PC programming mode)	X57-774 (NX-700) Ex type data.
Various Adjustment Data (PC Test mode)	General adjustment values for the X57-774 (NX-700).
Kenwood ESN	Model Name: [X57-774] NX-700 Type: Ex The same number as the Kenwood ESN label is written.
NXDN ESN/ MPT ESN/ Product number	The same number as the NXDN ESN/ MPT ESN/ Product Number label is written.

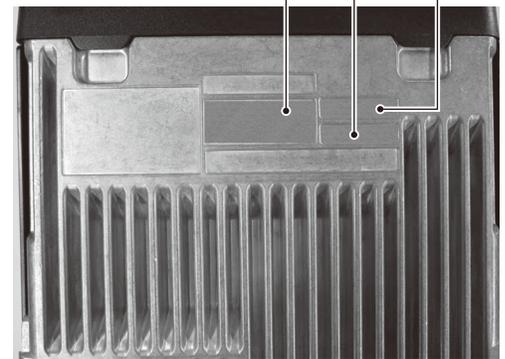

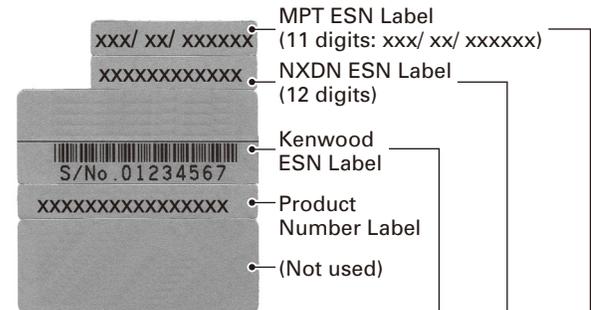

■ After Changing the PCB

1. After changing the printed circuit board, write the up-to-date Firmware following the instructions in the "REALIGNMENT - 6.Firmware Programming Mode".
2. Using the KPG-111D, select your desired item (Model Name and Frequency) from the Model> Product Information menu, then use Program> Write Data to the Transceiver to write the FPU data (PC Programming mode).
3. Enter Program> Test Mode, then adjust the various adjustment data (PC Test Mode) as described in the "ADJUSTMENT".
4. Attach the new labels corresponding to the new printed circuit board. (Refer to the images below for label placement.)
5. If necessary, write the FPU data used by the customer with the KPG-111D.

Note:

- When using the ESN Validation function of NXDN Trunking, the NXDN ESN number changes when the circuit board is changed (the number is written on the circuit board); the NXDN Trunking System cannot be accessed. Use the KPG-110SM on the NXDN Trunking System side to reprogram the NXDN ESN number.
- When a new printed circuit board is used, the Kenwood ESN changes, as does the Transceiver information display of the KPG-111D, but this does not have any effect on the operation of the transceiver.
- If changing to the original Kenwood ESN and NXDN ESN, please contact our service center.

■ ESN Label Layout

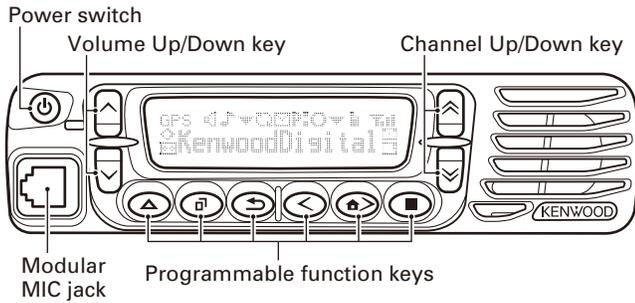

NX-700

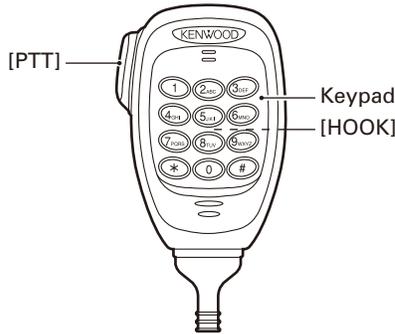

Note: A UPC code and UPC barcode is not printed on the Kenwood ESN Label. If necessary, cut the label at the cut-off line and attach only the serial number.

ADJUSTMENT

Controls

KMC-36

Panel Test Mode

■ Test mode operation features

This transceiver has a test mode. **To enter test mode, press and hold the [↵] key while turning the transceiver power ON. Before the transceiver enters test mode, the frequency version information appears on the LCD momentarily.** Test mode can be inhibited by programming. To exit test mode, turn the transceiver power OFF. The following functions are available in test mode.

■ Key operation

Key	"FNC" not appears on the sub LCD display	
	Function	Display
[↕] / [↖]	Test CH up/down	Channel No.
[↗] / [↘]	Volume up/down	-

• LED indicator

Red LED Lights during transmission.
Green LED Lights when there is carrier.

• Sub LCD indicator

"FNC" Appears at function on.

• LCD display in panel test mode

ADJUSTMENT

■ Frequency and Signaling

The transceiver has been adjusted for the frequencies shown in the following table. When required, readjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

• Test frequency

CH	RX (MHz)	TX (MHz)
1	155.05000	155.10000
2	136.05000	136.10000
3	173.95000	173.90000
4	155.00000	155.00000
5	155.20000	155.20000
6	155.40000	155.40000
7~16	-	-

• Analog mode signaling

No.	RX	TX
1	None	None
2	None	100Hz Square Wave
3	LTR Data : AREA=0, GOTO=12 HOME=12 ID=47, FREE=25	LTR Data : AREA=0, GOTO=12 HOME=12 ID=47, FREE=25
4	QT: 67.0Hz	QT: 67.0Hz
5	QT: 151.4Hz	QT: 151.4Hz
6	QT: 210.7Hz	QT: 210.7Hz
7	QT: 254.1Hz	QT: 254.1Hz
8	DQT: D023N	DQT: D023N
9	DQT: D754I	DQT: D754I
10	DTMF: 159D	DTMF: 159D
11	None	DTMF Code 9
12	2-tone : A: 304.7Hz B: 3106.0Hz	2-tone : A: 304.7Hz B: 3106.0Hz
13	Single Tone: 979.9Hz	Single Tone: 979.9Hz
14	None	Single Tone: 1000Hz
15	None	MSK
16	MSK	MSK

• NXDN mode signaling

No.	RX	TX
1	RAN1	RAN1
2	None	PN9
3	RAN1	Maximum deviation pattern

RAN: Radio Access Number

PN9: Pseudo-Random Pattern (For production only)

Panel Tuning Mode

■ Preparations for tuning the transceiver

Before attempting to tune the transceiver, connect the unit to a suitable power supply.

Whenever the transmitter is turned, the unit must be connected to a suitable dummy load (i.e. power meter).

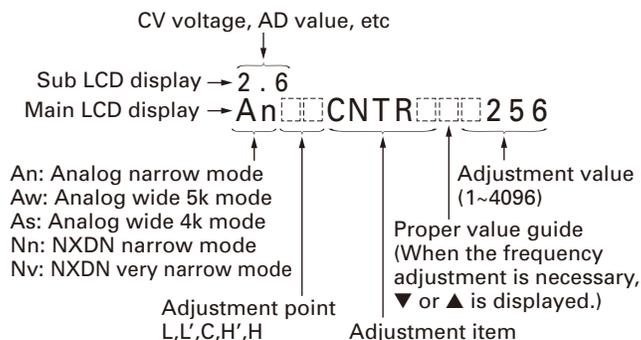

The speaker output connector must be terminated with a 4Ω dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during tuning.

■ Transceiver tuning (To enter tuning mode)

To enter tuning mode, press the [M] key while the transceiver is in test mode. Use the [←] key to write tuning data through tuning modes, and the [↔]/[↔] key to adjust tuning requirements (1 to 4096 appears on the LCD).

Use the [▲>] key to select the adjustment item through tuning modes. Use the [→] key to adjust 5 reference level adjustments, and use the [■] key to switch between Wide 5k/Wide 4k/Narrow/Very narrow.

• LCD display in panel tuning mode

■ Key operation

Key	Function	
	Push	Hold (1 second)
[↔] / [↔]	Adjustment value up/down	Continuation up/down
[^] / [v]	Volume up/down	Continuation up/down
[▲]	Auto adjustment start	-
[■]	Wide 5k/Wide 4k/Narrow/Very narrow	-
[M]	Shift to panel test mode	-
[→]	To enter 5 reference level adjustments L/L'/C/H'/H	-
[←]	Writes the adjustment value	-
[▲>]	Go to next adjustment item	Back to last adjustment item
Microphone key		
[PTT]	Transmit	-
[0] to [9] and [A] to [D], [#], [*]	-	-

ADJUSTMENT

■ 5 reference level adjustments frequency

Tuning point	RX (MHz)	TX (MHz)
Low	136.05000	136.10000
Low'	145.55000	145.60000
Center	155.05000	155.10000
High'	164.55000	164.60000
High	173.95000	173.90000

■ Adjustment item supplement

Adjustment Item	Description
LCD contrast	The contrast of LCD display can be changed.
Receive Assist	The lock voltage of VCO (Receive) is adjusted. This item must be adjusted before all adjustment items for receiver section are adjusted.
Transmit Assist	The lock voltage of VCO (Transmit) is adjusted. This item must be adjusted before all adjustment items for transmitter section are adjusted.
RTC	Real Time Clock (RTC) is adjusted. This item uses the internal clock. (Any measurement equipment is not required.)
Frequency	Frequency stability is adjusted under receiving condition with SSG. The SSG needs 0.001ppm accuracy so please use a standard oscillator if necessary. This item can be adjusted only in PC Test Mode so that the adjustment value is not changed easily.
High Transmit Power Limit	The limit value of the High Transmit Power output is adjusted.
Low Transmit Power Limit	The limit value of the Low Transmit Power output is adjusted.
High Transmit Power	High Transmit Power is adjusted.
Low Transmit Power	Low Transmit Power is adjusted.
Balance	The transmit audio frequency response is adjusted. This item is adjusted so that the deviation of 2kHz becomes the same deviation of 20Hz. This item must be adjusted before all adjustment items for deviations are adjusted.
Maximum Deviation (NXDN Narrow/Very Narrow)	Maximum Deviation of NXDN (Narrow/Very Narrow) is adjusted.
Maximum Deviation (Analog Wide 5k/Wide 4k/Narrow)	Maximum Deviation of Analog (Wide 5k/Wide 4k/Narrow) is adjusted. This item must be adjusted before all adjustment items for tone deviations are adjusted. Note: "Maximum Deviation (Analog Narrow)" must be adjusted before "CWID Deviation (NXDN Very Narrow)" is adjusted.
QT Deviation	QT tone deviation is adjusted.
DQT Deviation	DQT tone deviation is adjusted.
LTR Deviation	LTR tone deviation is adjusted.
DTMF Deviation	DTMF tone deviation is adjusted.
Single Tone Deviation	The deviation of Single Tone used in "2-tone" is adjusted.
MSK Deviation	MSK tone deviation is adjusted.
CWID Deviation	CWID tone deviation is adjusted. CWID is used to inform the others who is transmitting on a 6.25-kHz spacing channel. (In FCC rule, Analog mode or CWID is required for each channel-spacing.)
Sensitivity 1	Sensitivity 1 allows a service engineer to improve the intermodulation rejection, receiver spurious response, and receiver sensitivity characteristics by changing the voltage of Variable-Capacitor Tune in the receiver front-end circuit of the primary band-pass filter to optimize the characteristics at five frequency spots.
Sensitivity 2	Sensitivity 2 allows a service engineer to improve the intermodulation rejection, receiver spurious response, and receiver sensitivity characteristics by changing the voltage of Variable-Capacitor Tune in the receiver front-end circuit of the secondary band-pass filter to optimize the characteristics at five frequency spots.
RSSI Reference	The minimum RSSI level for scan stop is adjusted.
Open Squelch	The squelch level at level "5" is adjusted.

Adjustment Item	Description
Low RSSI	RSSI display level “ $\bar{\text{RSSI}}$ ” is adjusted.
High RSSI	Both “Low RSSI” and “High RSSI” must be adjusted. (The curve data of RSSI level is applied.)
Tight Squelch	The squelch level at level “9” is adjusted.

ADJUSTMENT

Test Equipment Required for Alignment

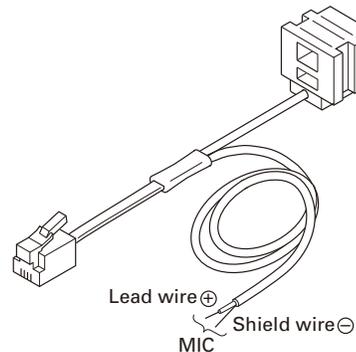

Test Equipment	Major Specifications	
1. Standard Signal Generator (SSG)	Frequency Range Modulation Output When performing the Frequency adjustment, the following accuracy is necessary. • 0.003ppm Use a standard oscillator for adjustments, if necessary.	Operational frequency range of the transceiver Frequency modulation and external modulation -127dBm/0.1μV to greater than -20dBm/22.4mV
2. RF Power Meter	Input Impedance Operation Frequency Measurement Capability	50Ω Operational frequency range of the transceiver Vicinity of 100W
3. Deviation Meter	Frequency Range	Operational frequency range of the transceiver
4. Digital Volt Meter (DVM)	Measuring Range Input Impedance	10mV to 20V DC High input impedance for minimum circuit loading
5. Oscilloscope		DC through 30MHz
6. High Sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 1000MHz 0.01ppm or less
7. DC Ammeter		20A or more
8. AF Volt Meter (AF VTVM)	Frequency Range Voltage Range	50Hz to 10kHz 1mV to 10V
9. Audio Generator (AG)	Frequency Range Output	50Hz to 5kHz or more 0 to 1V
10. Distortion Meter	Capability Input Level	3% or less at 1kHz 50mV to 10Vrms
11. 4Ω Dummy Load		Approx. 4Ω, 20W
12. Regulated Power Supply		13.2V, approx. 20A (adjustable from 9V to 20V) Useful if ammeter equipped
13. Spectrum Analyzer	Frequency Range Input Level Input Sensitivity Resolution Bandwidth Video Bandwidth	40MHz to 520MHz Up to +20dBm -100dBm 100Hz 100Hz
14. Tracking Generator	Frequency Range Output Level	40MHz to 520MHz -30dBm to 0dBm

Test cable for microphone input (E30-3360-08)

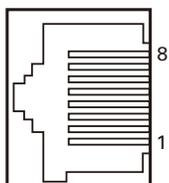

Tuning cable (E30-3383-05)

Adapter cable (E30-3383-05) is required for injecting an audio if PC tuning is used. See "PC Mode" section for the connection.

Press [Apply] button to store the adjustment value.						Write the value as followings. 375 (Reference value)	0.90~1.10kHz	

*4: Refer to the "Necessary Deviation adjustment item for each signaling and mode" table on page 60.

ADJUSTMENT

■ Necessary Deviation adjustment for each signaling and mode

The following shows the necessary adjustment items for each signaling deviation. Please read the following table like the following example. In the case of the signaling "QT (Wide 5k/Wide 4k)", this signaling is composed of three elements [Balance, Maximum Deviation (Analog Wide 5k/Wide 4k) and QT Deviation (Wide 5k/Wide 4k)]. Please adjust Balance and Maximum Deviation (Analog Wide 5k/Wide 4k) before adjusting QT Deviation (Wide 5k/Wide 4k).

Mode	Signaling	Necessary adjustment and order		
		Wide 5k/Wide 4k	Narrow	Very Narrow
Analog	Audio	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 5k/Wide 4k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow)	-
	QT	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 5k/Wide 4k) Step3. QT Deviation (Wide 5k/Wide 4k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow) Step3. QT Deviation (Narrow)	-
	DQT	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 5k/Wide 4k) Step3. DQT Deviation (Wide 5k/Wide 4k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow) Step3. DQT Deviation (Narrow)	-
	LTR (Wide only)	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide) Step3. LTR Deviation (Wide)	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow) Step3. LTR Deviation (Narrow)	-
	DTMF	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 5k/Wide 4k) Step3. DTMF Deviation (Wide 5k/Wide 4k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow) Step3. DTMF Deviation (Narrow)	-
	2TONE	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 5k/Wide 4k) Step3. Single Tone Deviation (Analog Wide 5k/Wide 4k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow) Step3. Single Tone Deviation (Analog Narrow)	-
	MSK (FleetSync)	Step1. Balance adjust Step2. Maximum Deviation (Analog Wide 5k/Wide 4k) Step3. MSK Deviation (Analog Wide 5k/Wide 4k)	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow) Step3. MSK Deviation (Analog Narrow)	-
NXDN	Audio	-	Step1. Balance adjust Step2. Maximum Deviation (NXDN Narrow)	Step1. Balance adjust Step2. Maximum Deviation (NXDN Very Narrow)
	CWID	-	-	Step1. Balance adjust Step2. Maximum Deviation (Analog Narrow) Step3. CWID Deviation (NXDN Very Narrow)

Balance is common with all the above deviation adjustments. If Balance (Transmitter Section5) has already adjusted, please skip Step1 and adjust from Step2. Maximum Deviation (Analog Wide5k/Wide 4k/Narrow) is common with all the analog signaling deviations and CWID Deviation (NXDN Very Narrow). If Balance and Maximum Deviation (Analog Wide5k/Wide 4k/Narrow) (Transmitter Section7) have already adjusted, please skip Step2 and adjust from Step3.

Receiver Section

TERMINAL FUNCTION

Display unit (X54-3680-10)

Pin No.	Name	Function
CN901 (to TX-RX unit A/2 CN597)		
1~6	SPO	Speaker input.
7	GND	Ground.
8	80C	8V input.
9,10	SB	Power input of switched power supply.
11	NC	Non connection.
12	/PSW	Detection signal output of power switch.
13,14	GND	Ground.
15	MIC	MIC signal output.
16	ME	MIC ground.
17	GND	Ground.
18	AFO	RX filtered AF signal input.
19	/PRST	Display MCU reset signal input.
20~23	GND	Ground.
24	SHIFT	Control signal input of Beat-shift function.
25	NC	Non connection.
26	5C	5V output.
27	TXD	Serial data signal input.
28	RXD	Serial data signal output.
29,30	GND	Ground.
CN902 (to internal speaker)		
1	GND	Ground.
2	SPO	Speaker output.
CN905 (to LCD ASSY)		
1	V5	LCD Drive voltage output.
2	V4	LCD Drive voltage output.
3	V3	LCD Drive voltage output.
4	V2	LCD Drive voltage output.
5	V1	LCD Drive voltage output.
6	Vdd	LCD Driver DC power supply.
7	Vss	LCD Driver Ground.
8	Vdd	LCD Driver DC power supply.
9	D7	LCD Driver data output.
10	D6	LCD Driver data output.
11	D5	LCD Driver data output.
12	D4	LCD Driver data output.
13	D3	LCD Driver data output.
14	D2	LCD Driver data output.
15	D1	LCD Driver data output.
16	D0	LCD Driver data output.
17	/WR	LCD Driver WR signal output.
18	A0	LCD Driver address output.
19	/RES	LCD Driver Reset signal output.
20	/CS	LCD Driver Chip-select signal output.

Pin No.	Name	Function
J901 (MIC jack)		
1	BLC	MIC key backlight control.
2	SB	Power output of switched power supply. DC13.2V±15%, 200mA typ.
3	E	Ground.
4	PTT/TXD	PTT: PTT input, TXD: Serial data output.
5	ME	MIC ground.
6	MIC	MIC signal input.
7	HOOK/RXD	HOOK: Hook detection, RXD: Serial data input.
8	DM	MIC data detection.

TX-RX unit (X57-7742-71) (A/2)

Pin No.	Name	Function
CN595 (to Option board)		
1	OPT1	Refer to "CN595 26-pin connector specification".
2	OPT3

19	OPT7	
20	OPT2	
21	TXO	
22	RXEO	
23	RXEI	
24	TXI	
25	OPT6	
26	POW	
CN597 (to Display Unit CN901)		
1,2	GND	Ground
3	RXD	Serial data signal input
4	TXD	Serial data signal output

TERMINAL FUNCTION

Pin No.	Name	Function
5	NC	No connection
6	50C	5V output.
7	SHIFT	Control signal output of Beat-shift function
8~11	GND	Ground
12	/PRST	Display MCU reset signal output
13	AFO	RX filtered AF signal output
14	GND	Ground
15	ME	MIC ground
16	MIC	MIC signal input
17,18	GND	Ground
19	/PSW	Detection signal input of power switch
20	NC	No connection
21,22	SB	Power output of switched power supply
23	80C	8V output
24	GND	Ground
25~30	SPO	Speaker output
CN600 (to TX-RX unit B/2 CN901)		
1	NC	No connection.
2~7	SB	Power output of switched power supply.
8	AFO	RX filtered AF signal output.
9	DI	Data signal input.
10	50C	5V output.
11	GND	Ground.
12	DEO	RX Detected signal output.
13	MI2	External MIC signal input.
14	ME	MIC ground.
15	GND	Ground.
16	RXD0	Serial data input 0.
17	AUXO2	AUX output 2.
18	TXD0	Serial data output 0.
19	AUXO1	AUX output 1.
20	AUXIO9	AUX input/output 9.
21	AUXIO5	AUX input/output 5.
22	AUXIO8	AUX input/output 8.
23	AUXIO4	AUX input/output 4.
24	TXD2	Serial data output 2.
25	AUXIO3	AUX input/output 3.
26	RXD2	Serial data input 2.
27	AUXIO2	AUX input/output 2.
28	AUXIO1	AUX input/output 1.
29	AUXIO7	AUX input/output 7.
30	AUXIO6	AUX input/output 6.
CN705		
1	SB	Power output of switched power supply.
2	SPI	Speaker output.

Pin No.	Name	Function
3	SPO	Speaker input.
4	PA	Control signal output of PA function.
5	HOR	Control signal output of Horn alert function.
6	GND	Ground.
CN403		
1	IGN	Ignition sense input.
2	GND	Ground.

TX-RX unit (X57-7742-71) (B/2)

Pin No.	Name	Function
CN901 (to TX-RX unit A/2 CN600)		
1	AUXIO6	AUX input/output 6.

LEVEL DIAGRAM

Receiver Section

SG input level for 12dB SINAD are obtained Measured by connecting SG to each point via a 0.01 μ F capacitor.

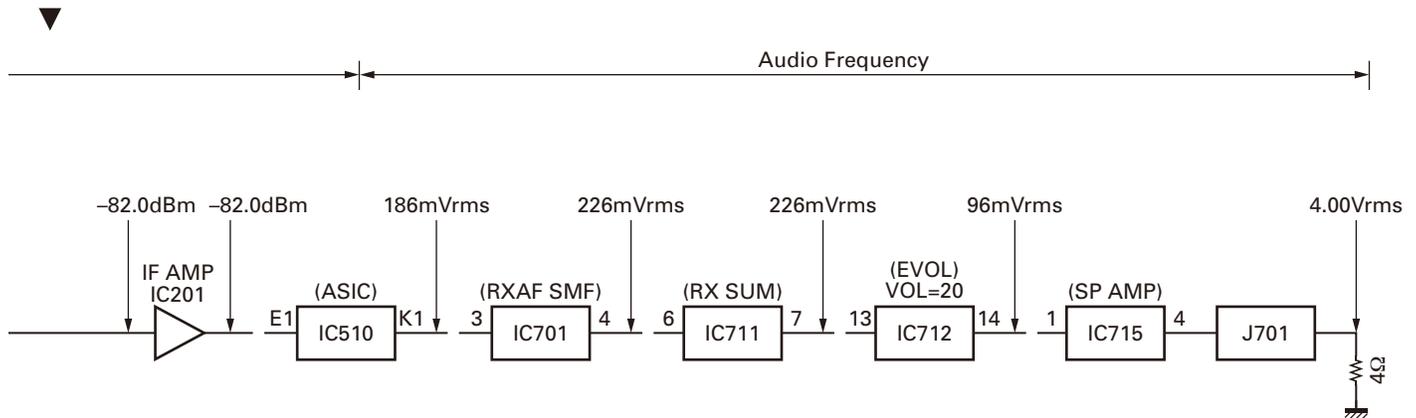

Transmitter Section

MIC input : 3kHz DEV. (Wide 5k), 2.4kHz DEV. (Wide 4k), 1.5kHz DEV. (Narrow) at 1kHz MOD.
 Transmitting frequency : Center frequency

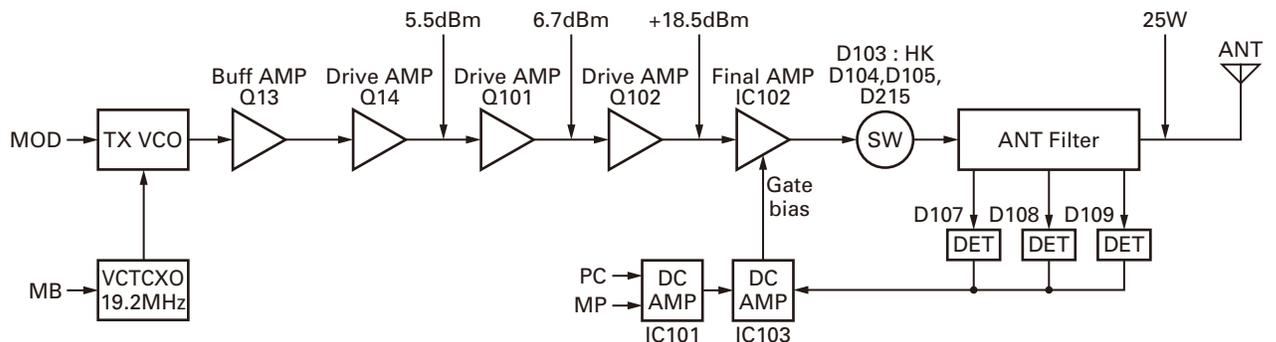

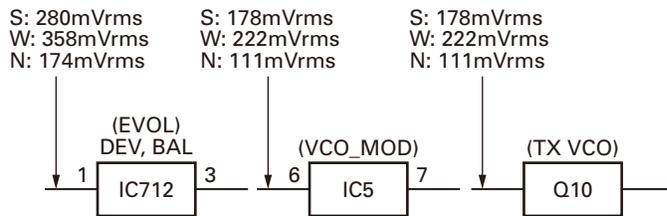

S : Wide 4k
W : Wide 5k
N : Narrow

LEVEL DIAGRAM

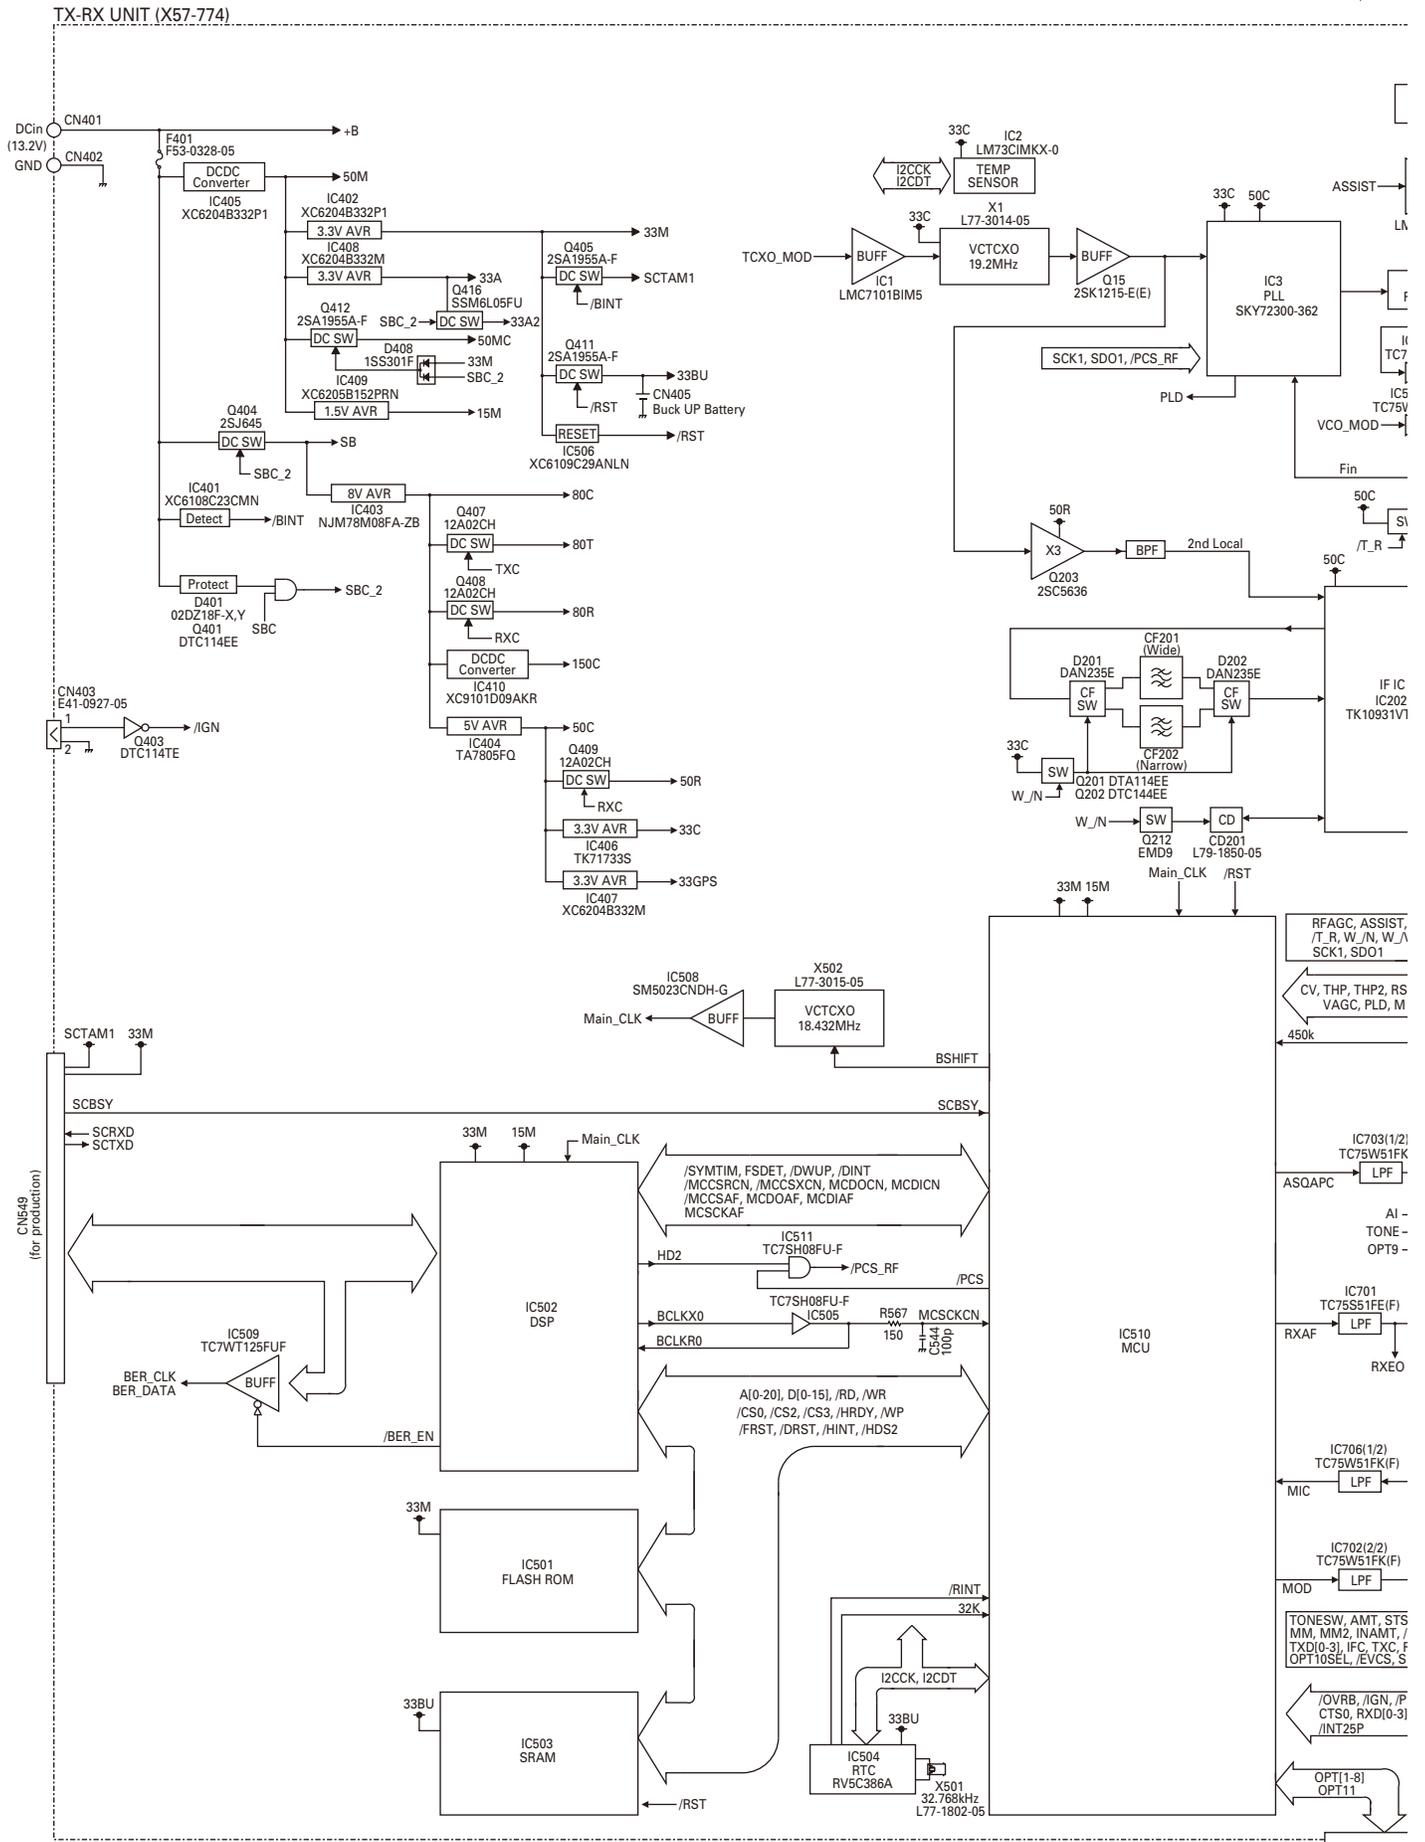

AF VTVM

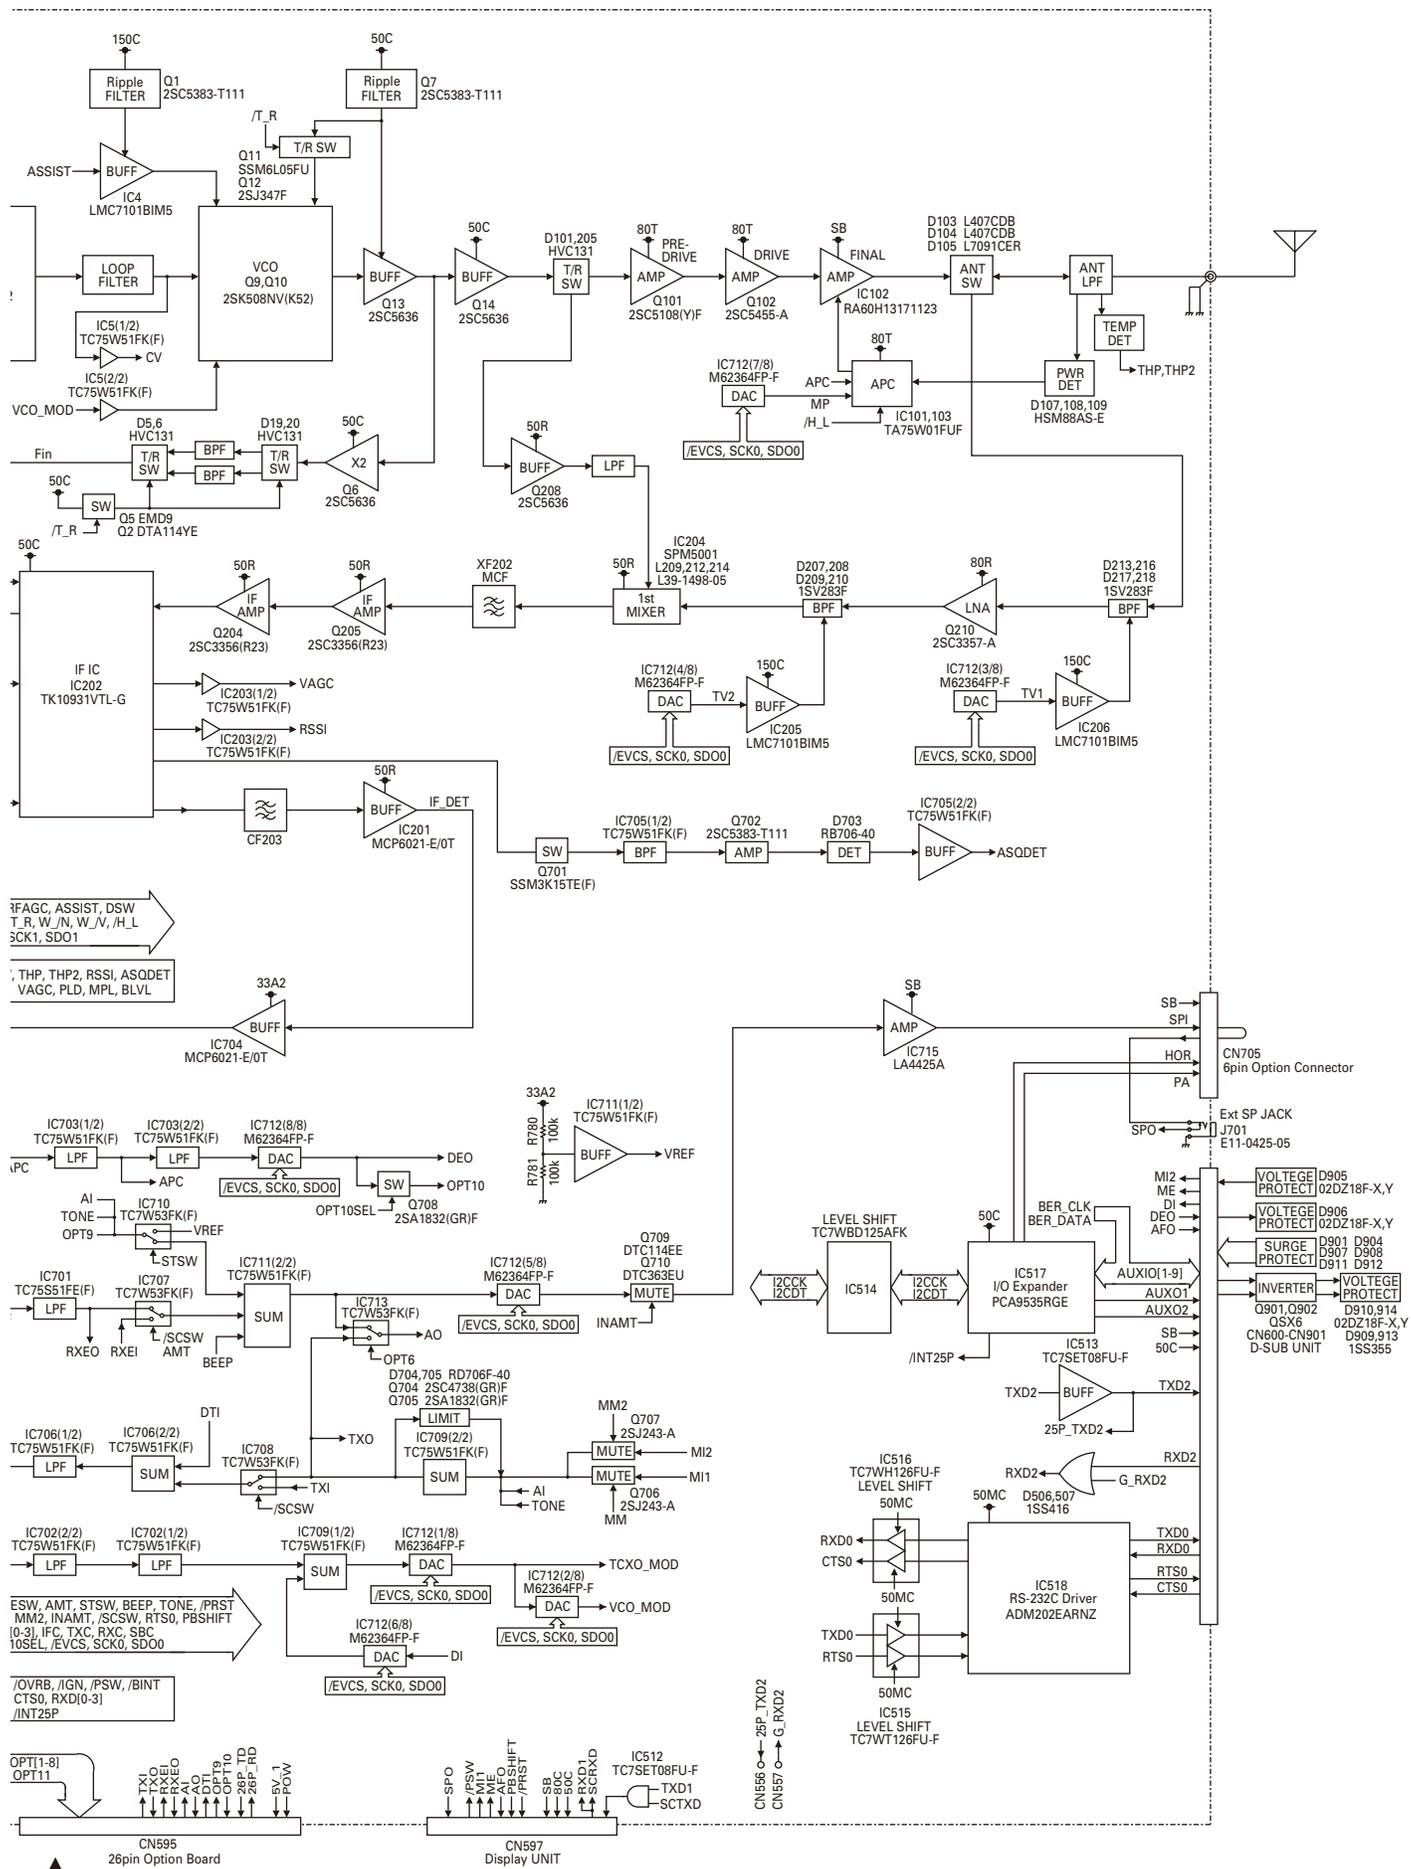

AF level obtained when the AF output level is adjusted for 4.00V/4Ω with the front panel AF VOL control. Measured with AF voltmeter connected to the external speaker jack, receiving a -53dBm SSG signal modulated at 1kHz, DEV. Wide 5k 3kHz, Wide 4k 2.4kHz, Narrow 1.5kHz.

SPECIFICATIONS

GENERAL

Frequency Range.....	136~174MHz
Number of Channels.....	512
Zones.....	128
Max. Channels per Zone.....	250
Channel Spacing.....	Analogue: 12.5/20/25 kHz Digital: 6.25/12.5 kHz
Operating Voltage.....	10.8~15.6V
Operating Temperature Range.....	-30°C~+60°C
Frequency Stability.....	±1.7ppm
Antenna Impedance.....	50Ω
Dimensions (W x H x D).....	160 x 45 x 157 mm
(Projections not included)	
Weight.....	1.38 kg

RECEIVER (Measurements made per EN standard)

Sensitivity	Digital @6.25kHz (3% BER): 0.20μV	Digital @12.5kHz (3% BER): 0.28μV
	Digital @6.25kHz (1% BER): -5dBμV	Digital @12.5kHz (1% BER): -2dBμV
	Analogue EIA 12dB SINAD: 0.25μV	
	Analogue EN 20dB SINAD: -3dBμV	
Adjacent Channel Selectivity	Analogue @25kHz: 80dB	Analogue @20kHz: 78dB Analogue @12.5kHz: 70dB
Intermodulation Distortion	Analogue: 70dB	
Spurious Response.....	Analogue: 80dB	
Audio Distortion.....	Less than 3%	
Audio Output	4W/4Ω	

TRANSMITTER (Measurements made per EN standard)

RF Power Output.....	1~25W
Spurious Emission.....	-36dBm ≤ 1GHz, -30dBm > 1GHz
FM Hum and Noise (EIA).....	Analogue @25kHz: 50dB Analogue @20kHz: 50dB Analogue @12.5kHz: 45dB
Modulation Distortion.....	Less than 3%
Modulation	16K0F3E, 14K0F2D, 14K0F3E, 12K0F2D, 8K50F3E, 7K50F2D, 8K30F1E, 8K30F1D, 8K30F7W, 4K00F1E, 4K00F1D, 4K00F7W, 4K00F2D

SG input level for 12dB SINAD are obtained Measured by connecting SG to each point via a 0.01μF capacitor.

AF VTVM

AF level obtained when the AF output level is adjusted for 4.00V/4Ω with the front panel AF VOL control. Measured with AF voltmeter connected to the external speaker jack, receiving a -53dBm SSG signal modulated at 1kHz, DEV. Wide 5k 3kHz, Wide 4k 2.4kHz, Narrow 1.5kHz.

MIC input : 3kHz DEV. (Wide 5k), 2.4kHz DEV. (Wide 4k), 1.5kHz DEV. (Narrow) at 1kHz MOD.
Transmitting frequency : Center frequency

S : Wide 4k
W : Wide 5k
N : Narrow
