Kenwood reserves the right to make changes to any products herein at any time for improvement purposes.

Firmware Copyrights

The title to and ownership of copyrights for firmware embedded in Kenwood product memories are reserved for Kenwood Corporation. Any modifying, reverse engineering, copy, reproducing or disclosing on an Internet website of the firmware is strictly prohibited without prior written consent of Kenwood Corporation. Furthermore, any reselling, assigning or transferring of the firmware is also strictly prohibited without embedding the firmware in Kenwood product memories.

GENERAL

INTRODUCTION

SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions. These are issued as required.

ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts : components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

PERSONAL SAFETY

The following precautions are recommended for personal safety:

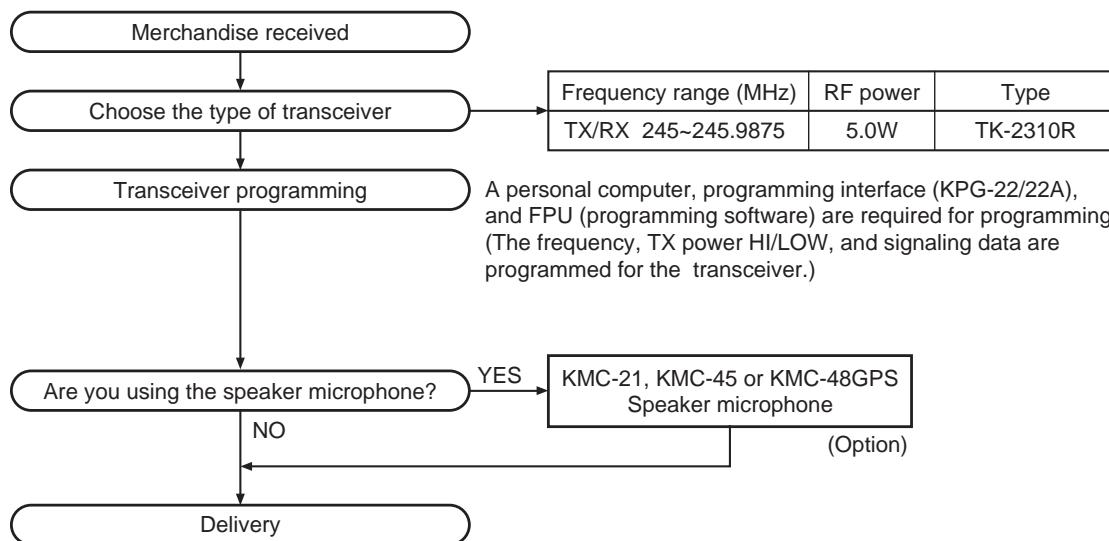

- DO NOT transmit until all RF connectors are verified secure and any open connectors are properly terminated.
- SHUT OFF and DO NOT operate this equipment near electrical blasting caps or in an explosive atmosphere.
- This equipment should be serviced by a qualified technician only.

SERVICE

This transceiver is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained within.

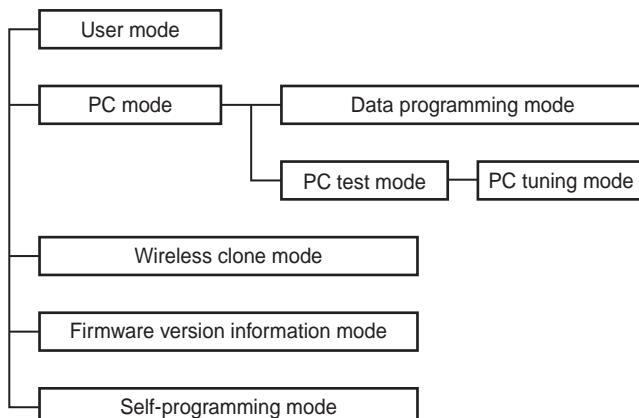

Model	Type	TX-RX unit	Frequency range	Remarks
TK-2310R	A	X57-7880-31	245~245.9875MHz	IF1: 49.95MHz LOC: 50.4MHz

SYSTEM SET-UP

REALIGNMENT

1. Modes

Mode	Function
Data programming mode	Used to read and write frequency data and other features to and from the transceiver.
PC test mode	Used to check the transceiver using the PC. This feature is included in the FPU.
Wireless clone mode	Used to transfer programming data from one transceiver to another.
Firmware version information mode	Used to confirm the internal firmware version.
Self-programming mode	You can program the frequency signaling and other function using only the transceiver.

2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
PC mode	Received commands from PC
Wireless clone mode	[+ Power ON (Two seconds)]
Firmware version information mode	[Side1] + [Side2] + Power ON (Two seconds)
Self-programming mode	[S] + Power ON (Two seconds)

Mode	Function
User mode	For normal use.
PC mode	Used for communication between the transceiver and PC.

REALIGNMENT

3. PC Mode**3-1. Preface**

The transceiver is programmed by using a personal computer, a programming interface (KPG-22/22A, USB adapter (KCT-53U)) and FPU (programming software).

The programming software can be used with a PC. Figure 1 shows the setup of a PC for programming.

3-2. Connection Procedure

1. Connect the transceiver to the personal computer with the interface cable and USB adapter (when the interface cable is KPG-22A, the KCT-53U can be used).

Note:

- You must install the KCT-53U driver in the computer to use the USB adapter (KCT-53U).
 - When using the USB adapter (KCT-53U) for the first time, plug the KCT-53U into a USB port on the computer with the computer power ON.
2. When the POWER is switched on, user mode can be entered immediately. When the PC sends a command, the transceiver enters PC mode.
When data is read from the transceiver, the red LED lights.
When data is written to by the transceiver, the green LED lights.

Note:

- The data stored in the personal computer must match Model Name and Model Type when it is written into EEPROM.
- Do not press the [PTT] key during data transmission or reception.

3-3. KPG-22/KPG-22A Description**(PC programming interface cable: Option)**

The KPG-22/22A is required to interface the transceiver with the computer. It has a circuit in its D-sub connector (KPG-22: 25-pin, KPG-22A: 9-pin) case that converts the RS-232C logic level to the TTL level.

The KPG-22/22A connects the SP/MIC connector of the transceiver to the RS-232C serial port of the computer.

3-4. KCT-53U Description (USB adapter: Option)

The KCT-53U is a cable which connects the KPG-22A to a USB port on a computer.

When using the KCT-53U, install the supplied CD-ROM (with driver software) in the computer. The KCT-53U driver runs under Windows 2000, XP or Vista (32-bit).

3-5. FPU (Programming Software) Description

The FPU is the programming software for the transceiver supplied on a CD-ROM. This software runs under windows XP, Vista or 7 on a PC. The software on this disk allows a user to program the transceiver transceivers via Programming interface cable (KPG-22/22A).

3-6. Programming with PC

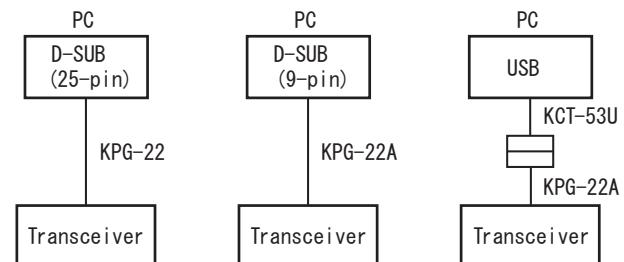

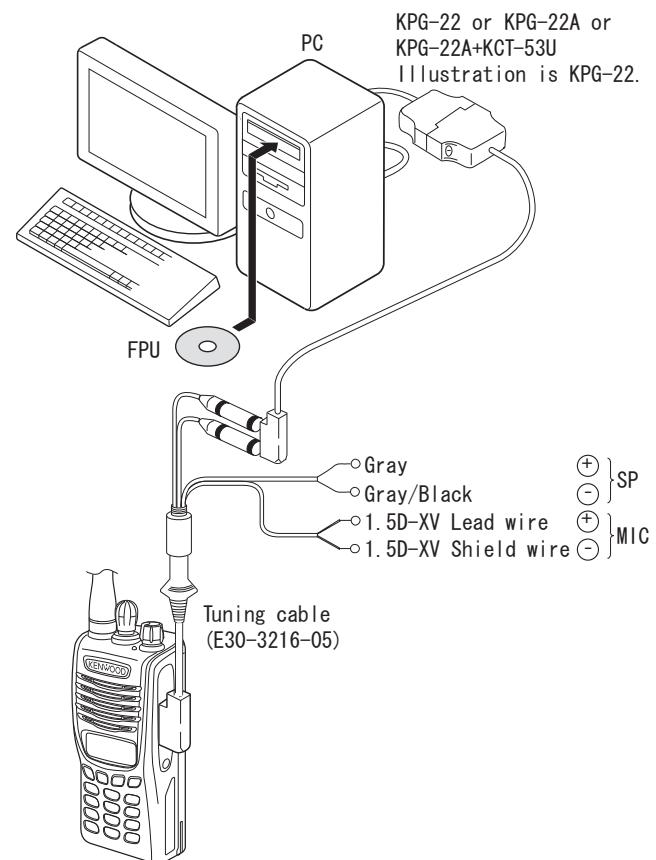

If data is transferred to the transceiver from a PC with the FPU, the data for each set can be modified.

Data can be programmed into the EEPROM in RS-232C format via the SP/MIC jack.

In this mode the PTT line operate as TXD and RXD data lines respectively.

REALIGNMENT

4. Wireless Clone Mode

4-1. Outline

"Wireless Clone Mode" copies the transceiver data to another transceiver.

The dealer can copy the transceiver data to another transceiver even without the use of a personal computer.

4-2. Example

The transceiver can copy the programming data to one or more transceivers via RF communication.

The clone source and clone target/s must be in wireless clone mode.

4-3. Operation

1. To switch the clone target/s to Clone mode, press and hold the [**B**] key while turning the transceiver power ON.
2. Wait for 2 seconds. "CLONE" appears on the LCD, followed by "FRQTBL 1".
3. Select a channel table number using the [Selector] knob.
4. To switch the clone source to Clone mode, press and hold the [**B**] key while turning the transceiver power ON.
5. Wait for 2 seconds. "CLONE" appears on the LCD, followed by "FRQTBL 1".
6. Select the same channel table number as the clone target/s.
7. Press the [S] key on the clone source to begin data transmission. When the clone target starts to receive data, the green LED will light and "CLONING" will appear on the LCD. The source unit will display "MASTER".
8. When the clone source finishes sending data, a "confirmation" tone will sound and "COMPLETE" will appear on the LCD. If data transmission failed while cloning, the target unit will produce an error tone and "CLONE NG" will appear on the LCD.
9. If the cloning fails, no data will be available in the target unit when it is returned to User mode.
10. When the cloning is successful, the target unit's "Scan" and "Key lock" functions will return to their default values (Scan = OFF, Key lock = OFF).
11. The source will remain in clone mode after cloning. The target unit will return to user mode after a successful cloning.

Note:

- The dealer can clone data to two or more transceivers by repeating the above procedures.
- If the transceivers wireless clone Mode is configured as "Disabled", the transceiver cannot enter Clone mode.
- The table shown below will cover the frequency tables used for wireless cloning.
- Wireless clone mode cannot be entered in battery low state.
- A unit cannot be a "Source Unit" if it is unprogrammed. If the [S] key is pressed, an "error" tone will sound.
- Once a unit is set to be the source, it cannot be a target after the data has been transmitted. This protects the data in the source unit.
- MSK signaling is used in cloning.
- Electronic interface may cause a failure in data transfer

during Wireless Clone, such as when waveforms or electromagnetics are being performed at the workbench.

- Wireless clone mode can be used ONLY by the authorized service personnel.
- The wireless clone mode setting must be configured as "Disable" before being delivered to the end-user.
- To wireless clone, replace the antenna from both the source transceiver and the target transceiver with a dummy load.
- The transmit output power is automatically set to Low in Clone mode.

4-4. Adding the Data Password

If the Data password is set to the transceiver, you must enter the password to activate a clone mode. The maximum length of the password is 6 digits.

The following describes how to enter the password.

1. Press and hold the [**B**] key for 2 seconds while turning the transceiver power on.
 2. "CLN.LOCK.R"(When the Read authorization password is set to the transceiver.) / "CLN.LOCK.W" (When the Overwrite password is set to the transceiver.) is displayed on the LCD.
 3. If the [selector] knob is rotated while "CLN.LOCK.R"/ "CLN.LOCK.W" is displayed, the number (0 to 9) flashes on the LCD.
- When you press the [**C**] key, the currently selected number is determined.
- If you press the [**A**] key, the least digit of the password is deleted.
- If you press the [S] key after entering the password in this procedure, "FRQTBL 1" is displayed if the entered password is correct.
- If the password is incorrect, "CLN.LOCK.R"/ "CLN.LOCK.W" is redisplayed.

• Clone frequency table

No.	Operating frequency 245~245.9875 (MHz)

20	245.95000

REALIGNMENT

5. Self Programming Mode

Write mode for frequency data and signaling, etc. To be used ONLY by the authorized service person maintaining the user's equipment.

5-1. Enter to the Self Programming Mode

Press and hold the [S] key for 2 seconds while turning the transceiver power on.

When the transceiver enters in the self programming mode, "1- 1" is displayed 2 seconds after "SELF" is displayed.

Note:

This mode (self programming mode) cannot be set when it has been disabled with the FPU.

5-2. Adding the Data Password

If the Data password is set to the transceiver, you must enter the password to activate a self programming mode. The maximum length of the password is 6 digits.

The following describes how to enter the password.

1. Press and hold the [S] key for 2 seconds while turning the transceiver power on.
2. "SLF.LOCK.R" (When the Read authorization password is set to the transceiver.) / "SLF.LOCK.W" (When the Overwrite password is set to the transceiver.) is displayed on the LCD.
3. If the [selector] knob is rotated while "SLF.LOCK.R"/ "SLF.LOCK.W" is displayed, the number (0 to 9) flashes on the LCD.

When you press the [C>] key, the currently selected number is determined.

If you press the [A] key, the least digit of the password is deleted.

If you press the [S] key after entering the password in this procedure, "SELF" is displayed if the entered password is correct.

If the password is incorrect, "SLF.LOCK.R"/ "SLF.LOCK.W" is redisplayed.

5-3. Channel Selection Mode

In this mode, the Zone or Channel can be selected.

Press and hold the [S] key for 2 seconds while turning the transceiver power on to enter self programming mode. When the transceiver enters in the self programming mode, the transceiver automatically enters the Channel Selection mode.

2 seconds after displaying "SELF", "1- 1" appears on the LCD.

The setup item for channel selection mode is as follows.

Setup item	Display	Remarks
Select Zone/Channel	>*** - *** *** - >***	Zone: 1~2 Channel: 1~125

Key operation

Key	Key Function
[Selector]	Toggle between Zone selection and Channel selection
[Side1]	No action
[Side2]	No action
[S]	Enter the Item Setting mode
[A]	Return to the Channel Selection mode
[<B]	Decrement the blinking Zone/Channel number by 1. Press and hold to decrement in steps of 10.
[C>]	Increment the blinking Zone/Channel number by 1. Press and hold to increment in steps of 10.

5-4. Item Selection Mode

In this mode, the following items can be selected.

- RX frequency
- RX signaling
- TX frequency
- TX signaling
- RF power Hi/Low
- Scan Del/Add
- Beat shift on/off
- Comander on/off

When the [S] key is pressed in the Channel Selection mode, the transceiver enters the Item Selection mode.

Key operation

Key	Key Function
[Selector]	The selected item changes
[Side1]	No action
[Side2]	No action
[S]	Enter the Item Setting mode
[A]	Return to the Channel Selection mode
[<B]	Error tone sounds
[C>]	Error tone sounds

REALIGNMENT

5-5. Item Setting Mode

In this mode, the selected item in the Item Selection mode can be programmed.

When the [S] key is pressed in the Item Selection mode, the transceiver enters the Item Setting mode.

The setup items for item setting mode are as follows

Setup item	Display	Remarks
1. RX frequency	1. RX FREQ → ***.*****	Receive frequency 245.00000~245.98750MHz
2. RX signaling	2. RX SIG TONE OFF/ QT ***.*/ DQT ***N/	Receive QT/DQT

Key operation

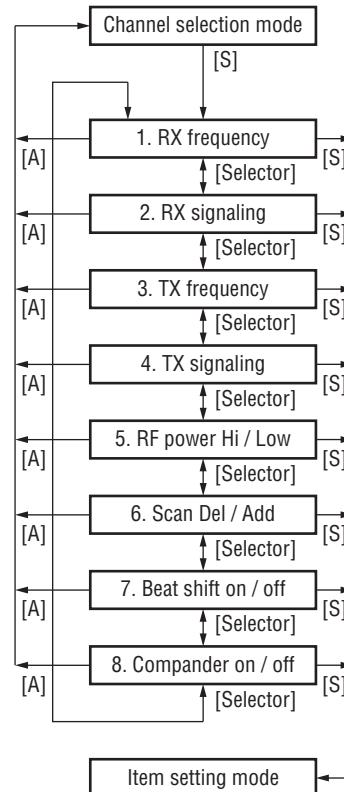

Key	Key Function
[Selector]	Changing the selection item (RX/TX frequency and RX/TX signaling only)
[Side1]	No action
[Side2]	No action
[S]	<ul style="list-style-type: none"> Store the current settings and return to the Item Selection mode without backup. A MHz digit of the frequency blinks. (RX/TX frequency only) The icon of the current signaling configuration. blinks. (RX/TX signaling only)
[A]	Abort the current settings and return to the Item Selection mode without backup
[]	Toggle/Decrease the blinking value.
[C>]	Toggle/Increase the blinking value.

5-6. Self Programming Mode flow chart

■ Channel selection mode flow chart

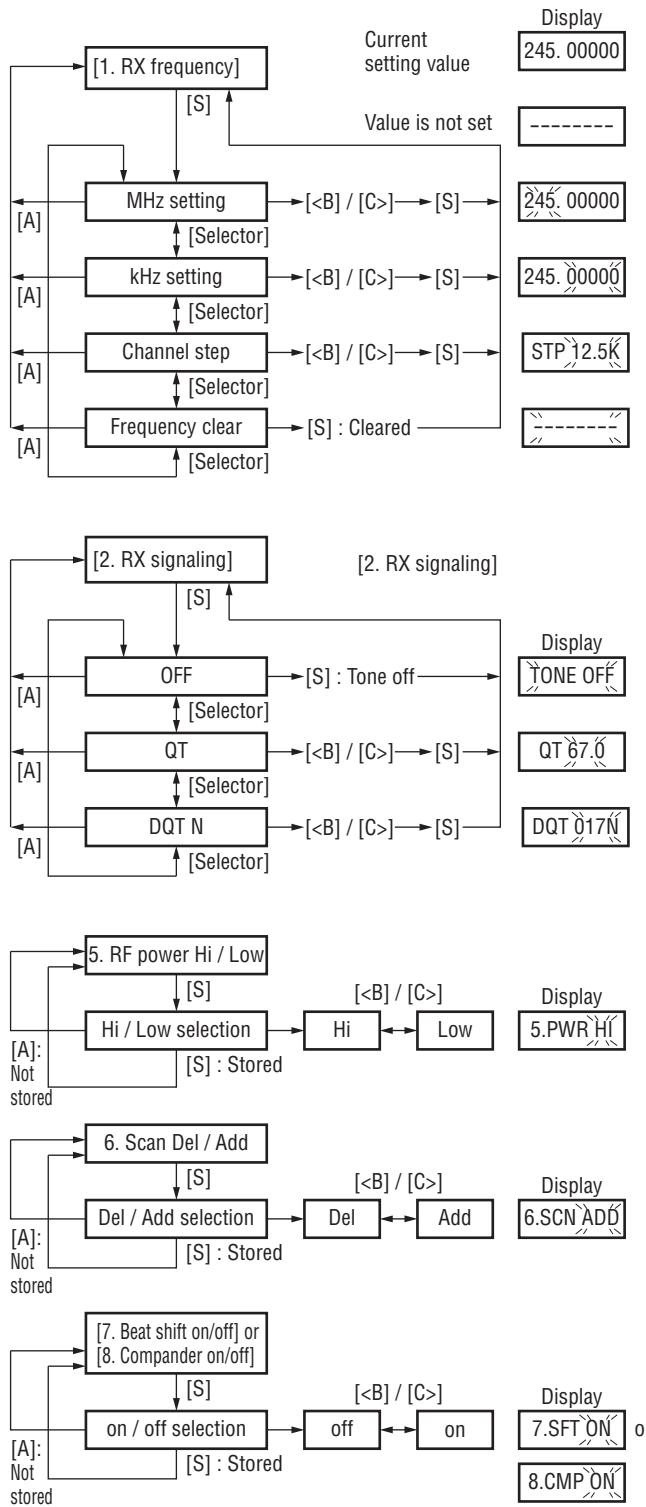

■ Item selection mode flow chart

REALIGNMENT

■ Item setting mode flow chart

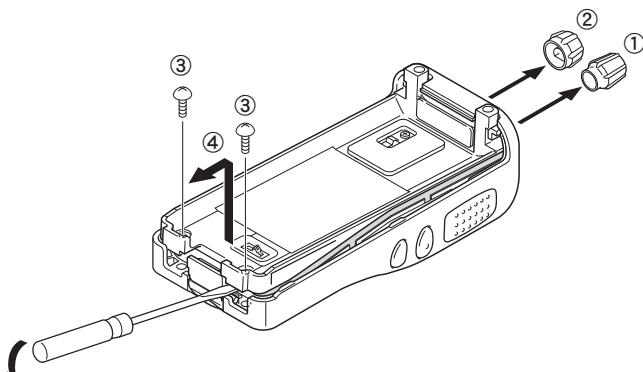

6. Firmware Version Information Mode

Turn the transceiver ON with the [Side1] and [Side2] keys held down. Then, the version is displayed during holding the [Side1] and [Side2] keys.

DISASSEMBLY FOR REPAIR

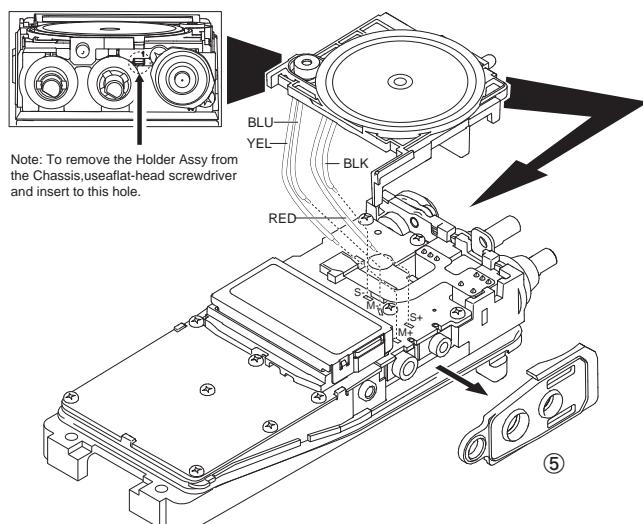

1. Removing the Case Assembly from the Chassis

1. Remove the selector knob ① and volume knob ②.
2. Remove the two screws ③.
3. Lift and remove the chassis from the case assembly ④.
(Use a flat-blade screwdriver to easily lift the chassis.)

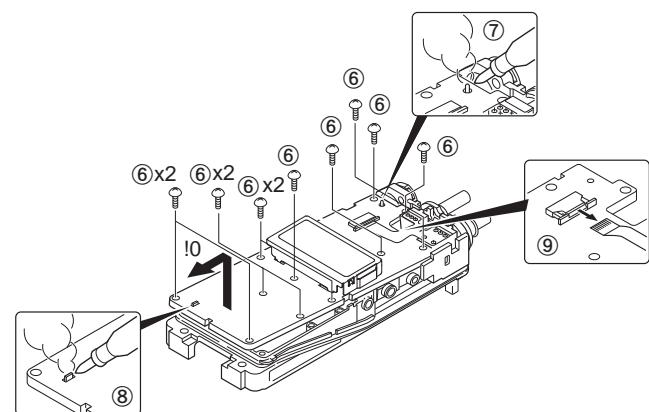

2. Removing the Holder Assembly from the Chassis

1. Remove the holder from the chassis.
- Note:** Taking care not to cut the speaker and microphone lead.
2. Detach the solder of speaker and microphone lead from the PCB beforehand.
3. Remove the packing ⑤ from the SP/MIC jack of the TX-RX unit.

3. Removing the TX-RX unit from the Chassis

1. Remove the eleven screws ⑥ fixing the TX-RX unit.
2. Remove the solder of the antenna terminal with a soldering iron ⑦.
3. Remove the solder of the positive terminal with a soldering iron ⑧.
- Note:** You can remove the TX-RX unit from the chassis without removing the solder at the positive terminal. However, in this case, you can not attach the packing (G53-1605-03) that is on the positive terminal to the chassis in assembling. So, it is advisable to remove the solder on the positive terminal first.
4. Remove the FPC from the flat cable connector ⑨.
5. Lift and remove the TX-RX unit from the chassis ⑩.

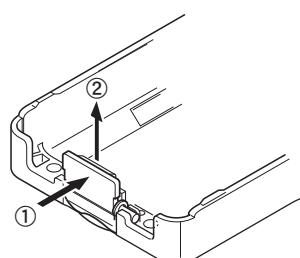

4. Removing the Battery Release Lever from the Case Assembly

1. Press the upper part of the lever toward the inside of the case assembly. One side of the shaft will be removed ①.
2. Lift and remove the battery release lever from the case assembly ②.

Note: Scratch and widen the glue hole if there is difficulty in removing the other end of the shaft.

No glue is required when you reassemble the battery release lever.

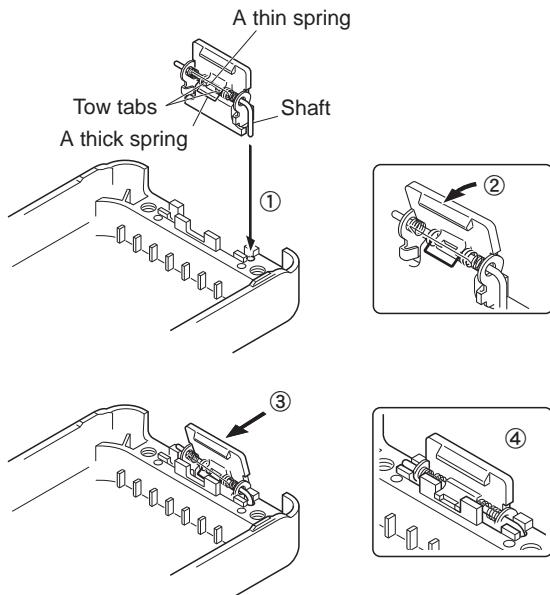

DISASSEMBLY FOR REPAIR

5. Attaching the Battery Release Lever to the Case Assembly

- Insert one side of the shaft into the hole at the lever fitting section on the case assembly ①.
- Caution: The thin spring (G01-4543-14) should be positioned above the two tabs of the lever.
- Tilt the battery release lever slightly forward ②, so that the thick spring (G01-4542-04) is positioned below the case surface.
- With the thick spring positioned below the case surface, attach the other side of the shaft to the case assembly by pressing the battery release lever ③ until it snaps into place ④.

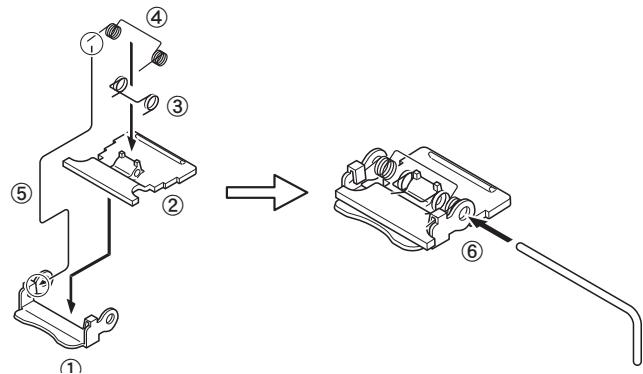

Caution: Be careful not to tilt the battery release lever too forward.

If the battery release lever is pushed in this state where the two tabs come below the case surface, there is a possibility of damaging the two tabs.

6. Assembling the Battery Release Lever

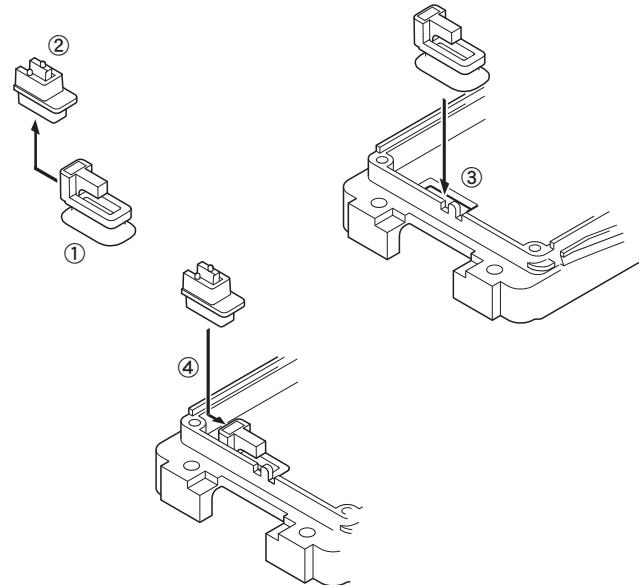

- Place the lever ② onto the stopper ①.
- Place the thick spring ③ onto the lever.
- Hook the right and left ends of the thin spring ④ onto the tabs of the stopper, then place the thin spring onto the lever ⑤.
- Slide the shaft through the hole of the stopper and lever ⑥.

7. Attaching the Positive Terminal to the Chassis

Always attach the positive terminal to the chassis, using the following procedures, before mounting the TX-RX unit onto the chassis.

- Remove the holder assembly ② from the packing ① of the positive terminal.
- Mount the packing of the positive terminal into the chassis hole ③.
- Mount the holder assembly into the packing of the positive terminal ④.

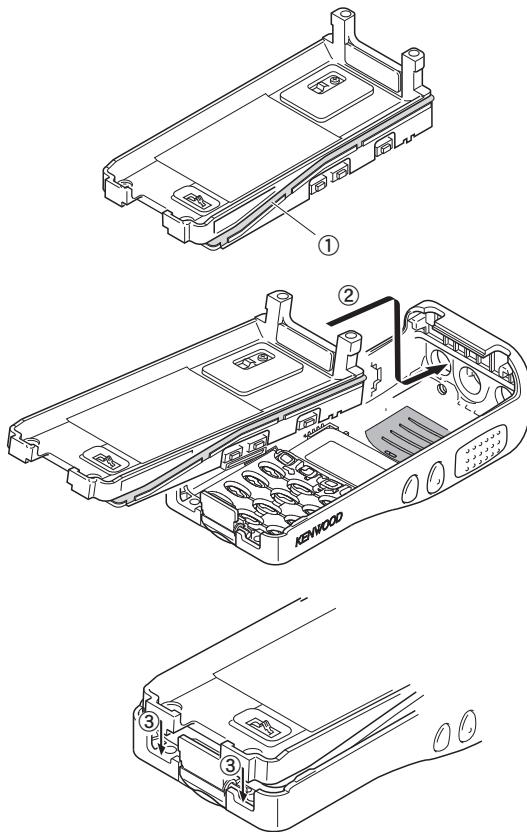

DISASSEMBLY FOR REPAIR

8. Mounting the Chassis to the Case Assembly

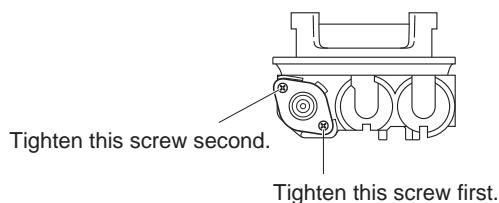

1. Confirm that the waterproof packing attached to the circumference of the chassis is securely inserted in the groove of the chassis ①.
2. Insert the upper part of the chassis into the case assembly ②.
3. Press the chassis ③ and the case assembly together to attach them.

Caution: If the packing of the SP/MIC does not come to the correct position after attaching the chassis to the case assembly, reposition the packing with your fingers.

9. Attaching the Antenna Receptacle to the Chassis

Screw the antenna receptacle to the chassis in the order shown in the drawing so that the antenna receptacle comes to the center of the case hole.

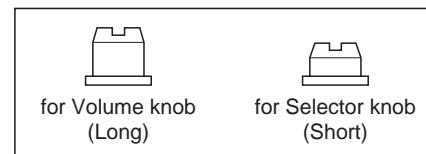

10. The Nuts of the Volume Knob and Channel Knob

Note that the shapes, colors and heights of nuts of the volume knob and channel knob are different from one another. (The nut of volume knob is silver, and the nut of channel knob is gold.)

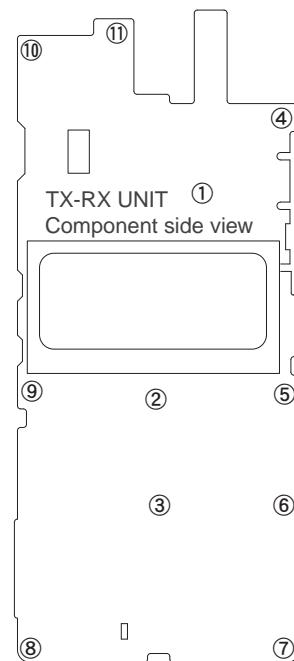

Use the following jig when removing the nuts of the volume knob and channel knob.

- Jig (Part No.: W05-1012-00)

11. Screw sequence for mounting the TX-RX unit to the chassis

Attach the TX-RX unit to the chassis using the screws in the order shown in the drawing below.

TK-2310R

CIRCUIT DESCRIPTION

1. Frequency Configuration

The receiver utilizes double conversion. The first IF is 49.95MHz and the second IF is 450kHz. The first Local oscillator is supplied from the PLL circuit.

The PLL circuit in the transmitter generates the necessary frequencies.

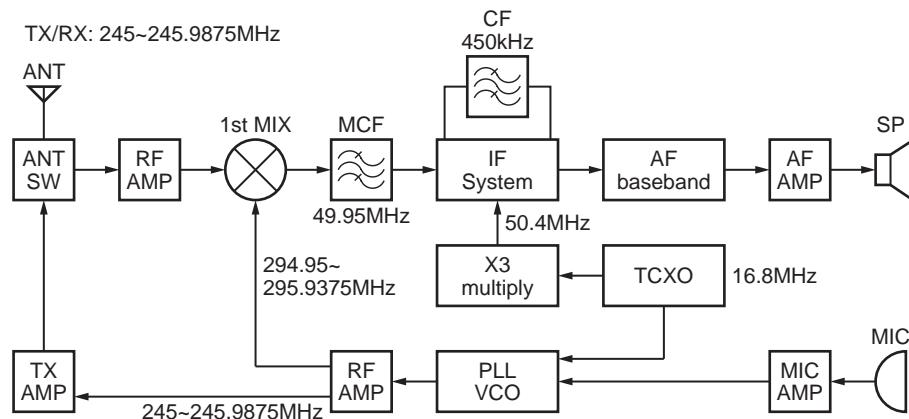

Fig. 1 Frequency configuration

2. Receiver System

The receiver system is shown in Figure 2.

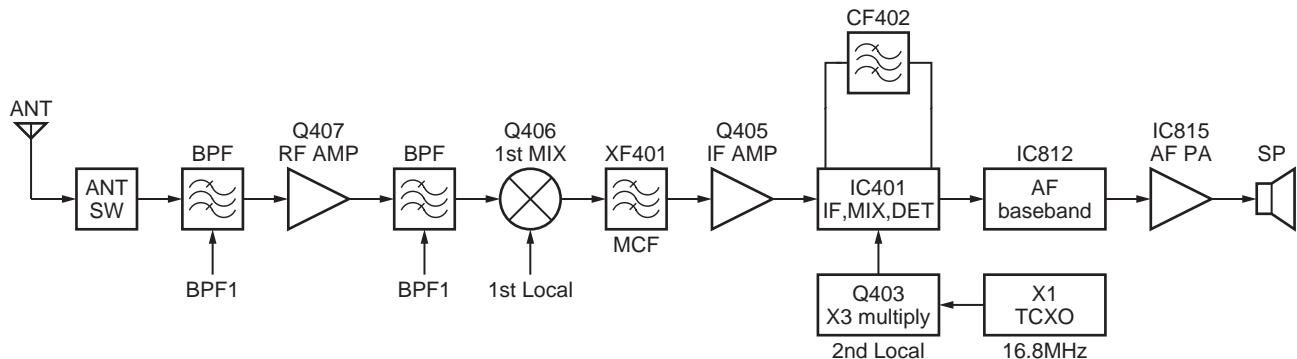

Fig. 2 Receiver system

2-1. Front End (RF Amplifier) Circuit

The signal coming from the antenna passes through the transmit / receive switching diode circuit (D201, D202, D203 and D204) and a BPF (L418 and L419), and is then amplified by the RF amplifier (Q407).

The resulting signal passes through a BPF (L416 and L414) and goes to the mixer. These BPFs are adjusted by variable capacitance diodes (D408, D407, D405 and D404). The input voltage to the variable capacitance diodes is a regulated voltage output from the DC amplifier (IC811).

2-2. First Mixer

The signal from the front end is mixed with the first local oscillator signal generated in the PLL circuit by Q406 to produce a first IF frequency of 49.95MHz.

The resulting signal passes through the XF401 MCF to cut the adjacent spurious and provide the optimum characteristics, such as adjacent frequency selectivity.

CIRCUIT DESCRIPTION

2-3. IF Amplifier Circuit

The first IF signal is passed through a four-pole monolithic crystal filter (XF401) to remove the adjacent channel signal. The filtered first IF signal is amplified by the first IF amplifier (Q405) and is then applied to the IF system IC (IC401).

The IF system IC provides a second mixer, limiting amplifier, quadrature detector and RSSI (Received Signal Strength Indicator). The second mixer mixes the first IF signal with the 50.4MHz signal of the second local oscillator output (Q403) and produces the second IF signal of 450kHz.

The second IF signal is passed through the ceramic filter (CF402) to remove the adjacent channel signal. The filtered second IF signal is amplified by the limiting amplifier and demodulated by the quadrature detector with the ceramic discriminator (CD401). The demodulated signal is routed to the audio circuit.

2-4. Audio Amplifier Circuit

The demodulated signal from IC401 is sent to an audio power amplifier (IC815) through baseband IC (IC812), where it is amplified and output to the speaker.

2-5. Squelch Circuit

Part of the AF signal from the IC401 enters the FM system IC (IC401) again, and the noise component is amplified and rectified by a filter and an amplifier to produce a DC voltage corresponding to the noise level.

The DC signal from the FM IC goes to the analog port of the MCU (IC820). IC820 determines whether or not to output sounds from the speaker by checking if the input voltage is higher or lower than the preset value.

To output sounds from the speaker, IC820 sends a high signal to the AF_CONT line and turns IC815 on through Q813, Q814, Q818 and Q819.

3. Transmitter System

3-1. Microphone Amplifier Circuit

The signal from the microphone is limited by the AGC circuit, which is composed of D807, D808, Q810, Q811 and the mute switch (Q809). IC812 is composed of a high-pass filter, low-pass filter and pre-emphasis/IDC circuit.

The signal from the microphone and the low speed data from the MCU (IC820) enter the baseband IC (IC812) and pass through each path and are mixed inside the IC.

The output signal from the baseband IC goes to the VCO modulation input. The other output signal passes through the amplifier (IC3) and goes to the TCXO modulation input.

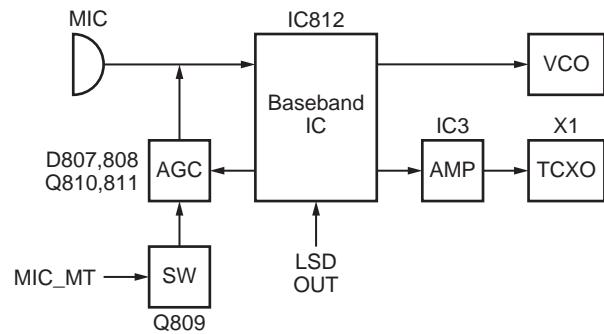

Fig. 4 Microphone amplifier circuit

CIRCUIT DESCRIPTION

3-2. Driver and Final Amplifier Circuit

The signal from the T/R switch (D18 is on) is amplified by the RF AMP (Q201) and pre-drive amplifier (Q203) to 50mW.

The output of the pre-drive amplifier is amplified by the drive amplifier (Q204) and the RF final amplifier (Q205) to 5.0W (1W when the power is low).

The drive amplifier and the RF final amplifier consist of two MOS FET stages.

The output of the RF final amplifier is then passed through the antenna switch (D201 and D202) and the harmonic filter (LPF), and is applied to the antenna terminal.

3-3. APC Circuit

The APC circuit always monitors the current flowing through the drive amplifier (Q204) and the RF power amplifier (Q205) and keeps a constant current. The voltage drop at R307, R309 and R310 is caused by the current flowing through the RF final amplifier. This voltage is applied to the differential amplifier IC301 (1/2).

IC301 (2/2) compares the output voltage of IC301 (1/2) with the reference voltage from IC811. The output of IC301 (2/2) controls the VG of the RF power amplifier and the drive amplifier to make both voltages the same.

The change of power high/low is carried out by the change of the reference voltage.

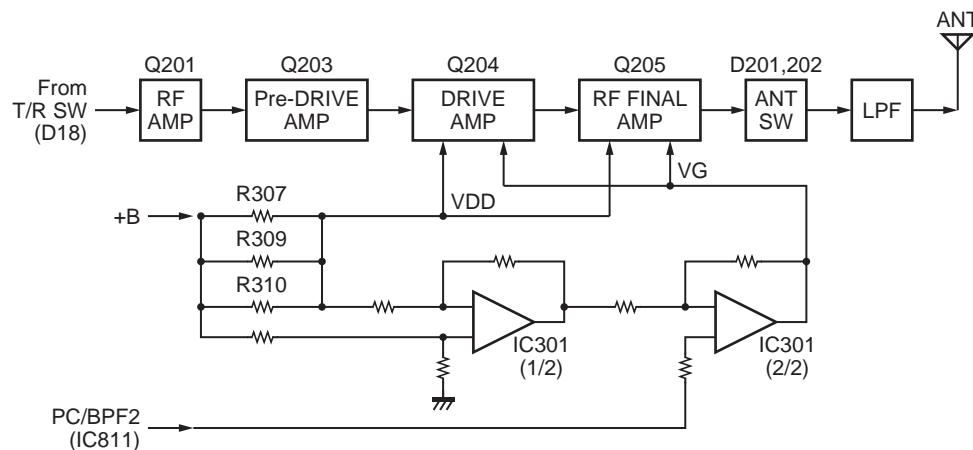

Fig. 5 Driver and final amplifier and APC circuit

4. Frequency Synthesizer Unit

4-1. Frequency synthesizer

The frequency synthesizer consists of the TCXO (X1), VCO, PLL-IC (IC1), and buffer amplifiers.

The TCXO generates 16.8MHz. The frequency stability is 1.5ppm within the temperature range of -30°C to +60°C. The frequency tuning and modulation of the TCXO are done to apply voltage to pin 1 of the TCXO. The output of the TCXO is applied to pin 10 of PLL-IC.

The VCO consists of 2 VCO and covers a dual range of 245~245.9875MHz and 294.95~295.9375MHz. The VCO generates 294.95~295.9375MHz for providing the first local signal for reception. The operating frequency is generated by Q5 in transmitting mode and Q4 in receiving mode. The oscillation frequency is controlled by applying the VCO control voltage, obtained from the phase comparator (IC1) to the variable capacitance diodes (D6 and D9 in transmitting mode and D7, D10 and D12 in receiving mode)

The TX/RX pin of IC820 goes "high" in transmitting mode, causing Q7 and Q4 to turn off, and Q5 turn on. The TX/RX pin goes "low" in receiving mode.

The output from Q4 and Q5 are amplified by a buffer amplifier (Q8) and Q2, and then sent to the PLL-IC.

The PLL-IC consists of a prescaler, reference divider, phase comparator, and charge pump. The input signal from pin 10 and 17 of the PLL-IC is divided down and compared at the phase comparator. The pulsed output signal of the phase comparator is applied to the charge pump and transformed into a DC signal in the loop filter (LPF). The DC signal is applied to the CV of the VCO and locked to keep the VCO frequency constant.

PLL data is output from PL_STB (pin 20), PL_CLK (pin 8), and PL_DAT (pin 21) of the MCU (IC820). The data is input to the PLL-IC when the channel is changed or transmission is changed to reception and vice versa. PLL lock condition is always monitored by pin 18 (PL_UL) of the MCU. When the PLL is unlocked, PL_UL goes low.

CIRCUIT DESCRIPTION

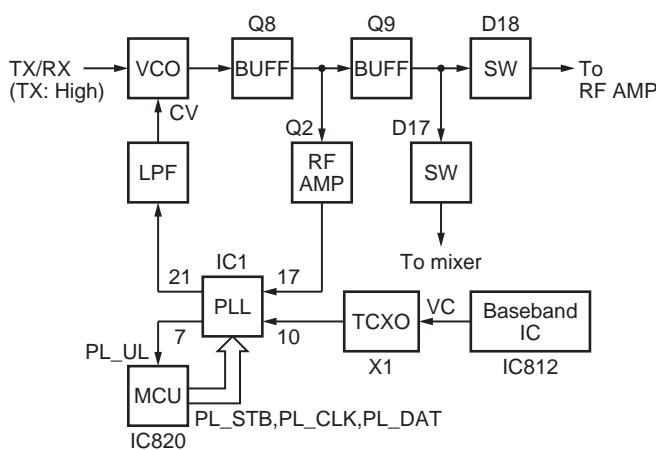

Fig. 6 PLL block diagram

5. Control Circuit

The control consists of the MCU (IC820) and its peripheral circuits. It controls the TX-RX unit. IC820 mainly performs the following;

- 1) Switching between transmission and reception by PTT signal input.
- 2) Reading channel information, frequency, and program data from the memory circuit.
- 3) Sending frequency program data to the PLL.
- 4) Controlling squelch on/off via the DC voltage from the squelch circuit.
- 5) Controlling the audio mute circuit via the decode data input.
- 6) Transmitting tone and encode data.

5-1. Frequency Shift Circuit

The MCU (IC820) and baseband IC (IC812) operates at a clock frequency of 19.2MHz. The oscillator circuit has the baseband IC. This oscillator has a circuit that shifts the frequency via Beat shift switch (Q806).

A beat sound may be able to be evaded if "Beat Shift" is set to ON when it is generated in the internal spurious transmission modulated sound of the transceiver.

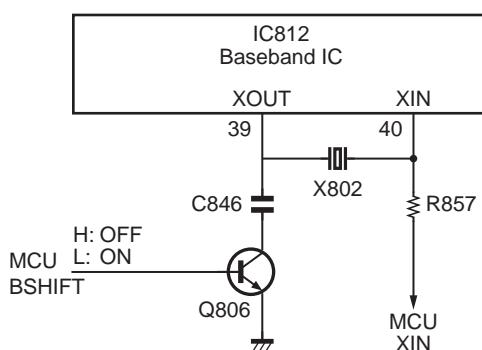

Fig. 7 Frequency shift circuit

5-2. Memory Circuit

The Memory circuit consists of the MCU (IC820) and EEPROM (IC810). The EEPROM has a capacity of 512k bits and stores the channel information, the last channel data, the scan on status, and other parameters.

■ EEPROM

Note:

The EEPROM stores tuning data (Deviation, Squelch, etc.).

Realign the transceiver after replacing the EEPROM.

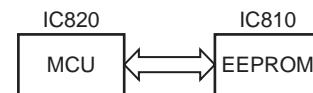

Fig. 8 Memory circuit

5-3. Low Battery Warning

The battery voltage is monitored by the MCU (IC820 pin 63: BATT). When the battery voltage falls below the voltage set by the Low Battery Warning adjustment, the red LED blinks, notifying the operator that it is time to replace the battery (when the always option (default setting) under the Battery Warning function in the FPU is selected). If the battery voltage falls below 5.6V, the transceiver does not transmit and the warning tone beeps while the PTT switch is pressed.

Low battery warning	Battery status
The red LED blinks during transmission.	The battery voltage is low but the transceiver is still usable.
The red LED blinks and the warning tone beeps while the PTT switch is pressed.	The battery voltage is low and the transceiver cannot be used to make calls.

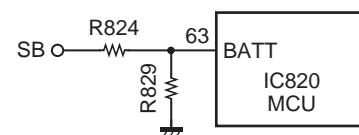

Fig. 9 Low battery warning

CIRCUIT DESCRIPTION

5-4. Key Input

Keys and channel selector circuit.

The signal from the keys and channel selector are directly input to the MCU, as shown in Figure 10.

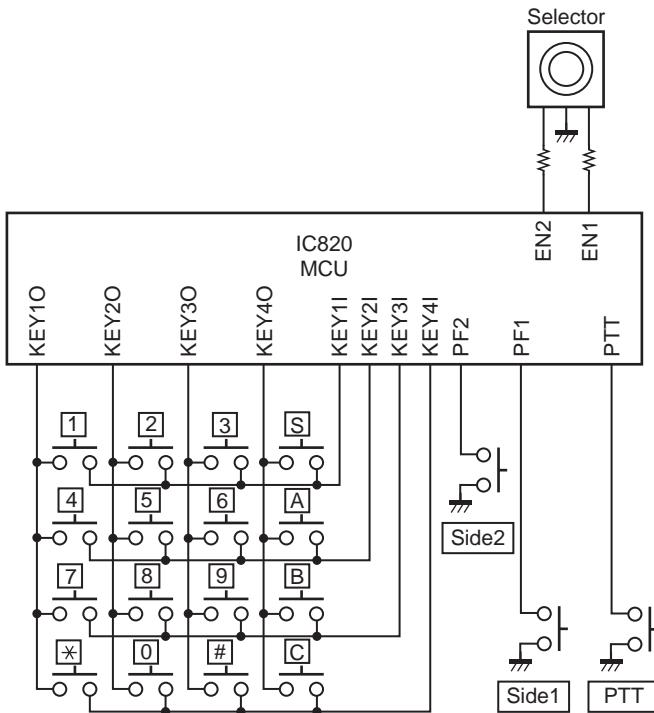

Fig. 10 Key input

6. Signaling Circuit**6-1. Encode****■ Low-speed data (QT, DQT)**

Low-speed data is output from pin 2 of the MCU. The signal passes through the low pass CR filter, and goes to the baseband IC (IC812). The signal is mixed with the audio signal and goes to the VCO and TCXO (X1) modulation input after passing through the D/A converter inside the baseband IC (IC812) for BAL adjustment.

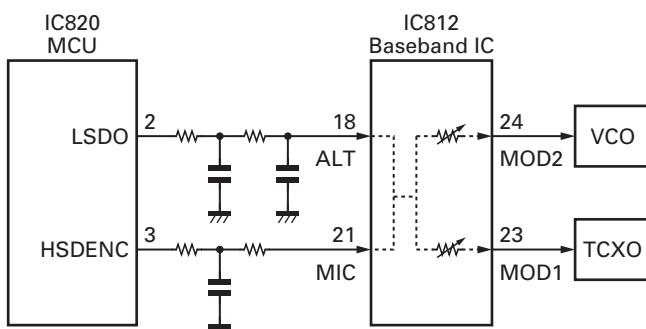

Fig. 11 Encode

■ High-speed data (2-tone)

High-speed data (HSD) is output from pin 3 of the MCU. HSD deviation made by an adjustment in the MCU is passed through the low pass CR filter and then applied to the baseband (IC812).

The signal is mixed with the audio signal and goes to the VCO and TCXO.

■ MSK/DTMF

The MSK/DTMF signal is generated in the baseband IC (IC812). The signal passes through the D/A converter (inside the baseband IC812) and is routed to the VCO. When encoding the MSK/DTMF, the microphone input signal is muted.

6-2. Decode**■ QT/DQT**

The output signal from the IF IC (IC401) enters the MCU (IC820) through IC812. IC820 determines whether or not the QT or DQT matches the preset value, and controls the AFSW and speaker output sounds according to the squelch results.

■ 2-tone

Part of the received AF signal output from the IF IC (IC401) passes through the baseband IC (IC812) goes to HSD amplifier IC808, is compared, and then goes to IC820. IC820 checks whether or not the 2-tone data is necessary. If it matches, IC820 carries out a specified operation, such as turning the speaker on.

■ MSK (Fleet Sync)

The MSK input signal from the IF IC (IC401) goes to IC812. The decoded information is then processed by the MCU.

■ DTMF

The DTMF input signal from the IF IC (IC401) goes to IC812. The decoded information is then processed by the MCU.

7. Power Supply

There are five 5V power supplies and three 3.3V power supplies: 50M, 50V, 50C, 50R, 50T, 33M, 33MS and 33B.

50M and 33M are always output while the power is on.

33MS is always output, but turns off when the power is turned off, to prevent malfunction of the MCU.

50C is a common 5V and is output when SAVE is not set to ON.

50R is 5V for reception and output during reception.

50T is 5V for transmission and output during transmission.

50V is 5V for the SP/MIC connector.

33B is 3.3V for the baseband IC (IC812).

SEMICONDUCTOR DATA

MCU: F363BEDFEKDLC (TX-RX unit: IC820)

Pin No.	Signal Name	I/O	Function
1	BSHIFT	O	CPU clock frequency shift
2	LSDO	O	QT/DQT output
3	HSDENC	O	2-Tone/BEEP output
4	EN1	I	Encoder detect for direction
5	EN2	I	Pull up for P8_4 (EN2)
6	MODE	I	(Using E8a emulator)
7	NC	-	NC
8	PL_CLK	O	PLL IC clock output
9	RESET	-	Hardware reset input
10	XOUT	-	NC
11	VSS	-	GND
12	XIN	-	Main clock input (19.2MHz)
13	VCC	-	3.3V
14	EMPTT	O	Emergency PTT
15	EN2	I	Encoder interrupt
16	CM_IRQ	I	Baseband IC IRQ
17	INT0	I	Battery low interrupt (4.5V)
18	PL_UL	I	PLL IC unlock input
19	PTT	I	PTT input
20	PL_STB	O	PLL IC STB output
21	PL_DAT	O	PLL IC data output
22	NC		NC
23	33MSC	O	33MS control for switched 33M
24	TXD	O	Serial data (FPU) to PC
25	RXD	I	Serial data (FPU) from PC
26	EM_CLK	O	For E8a emulator
27	APCSW	O	APC enable/disable
28	TX/RX	O	TX/RX switch H: TX, L: RX
29	50VC	O	5V AVR control for GPS MIC option/OPT DET
30	5TC	O	5T control output
31	EP.DTO	O	EEPROM IC data output
32	EP_CLK	O	EEPROM IC clock output
33	CM.DTO	O	Baseband IC data output
34	EMP	O	For FDT tool
35	5RC	O	5R control output
36	EP_WP	O	EEPROM IC write protect output
37	EP.DTO	I	EEPROM IC data input
38	EP_CS	O	EEPROM IC chip select output
39	CE	O	For FDT tool
40	CM_CLK	O	Baseband IC clock output

Pin No.	Signal Name	I/O	Function
41	CM_DTI	I	Baseband IC data input
42	CM_CNS	O	Baseband IC chip select output
43	DC_SW	O	APC voltage discharge switch
44	KEY1O	O	Key matrix output 1
45	KEY2O	O	Key matrix output 2
46	KEY3O	O	Key matrix output 3
47	KEY4O	O	Key matrix output 4
48	KEY1I	I	Key matrix input 1
49	KEY2I	I	Key matrix input 2
50	KEY3I	I	Key matrix input 3
51	KEY4I	I	Key matrix input 4
52	PF1	I	Side key 1 input
53	PF2	I	Side key 2 input
54	LCDBL	O	LCD backlight switch L: ON, H: OFF
55	LC_INH	O	LCD diver IC INH output
56	LC_CLK	O	LCD diver IC clock output
57	LC_DAT	O	LCD diver IC date output
58	LC_CE	O	LCD diver IC chip enable output
59	LC_MOD	O	LCD diver IC mode output
60	HSDDEC	I	2-Tone/5-Tone decode input
61	QT/DQT	I	QT/DQT decode input
62	CVIN	I	VCO lock voltage reading for auto alignment
63	BATT	I	Battery level input
64	VOX	I	VOX level Input
65	BUSY	I	RX busy input
66	TH_DET	I	Temperature level input
67	RSSI	I	RSSI input
68	WID/NAR	O	Wide narrow switch H: WID, L: NAR
69	ASSIST	O	Assist switch
70	AF_MUT	O	Speaker mute output
71	MIC_MT	O	Mic mute output
72	MAN_DN	I	MAN down
73	5CC	O	5C control output
74	LEDBLU	O	Blue LED light control
75	AVSS	-	GND
76	LEDGRN	O	Green LED light control
77	VREF	-	3.3V for A/D reference
78	AVCC	-	3.3V
79	LEDRED	O	Red LED light control
80	OPTDET	I	Option detection input

COMPONENTS DESCRIPTION

TX-RX unit (X57-7880-31)

Ref. No.	Use / Function	Operation / Condition
IC1	PLL IC	TX/RX 1st local
IC2	OP amplifier	CVIN/CVADJ amplifier
IC3	OP amplifier	APC control
IC301	OP amplifier	CVIN/CVADJ amplifier
IC401	FM IC	RX FM system
IC801	5V AVR	50M
IC802	5V AVR	50C
IC803	5V AVR	50V
IC804	3.3V AVR	33M
IC805	Reset IC	Low battery level detector
IC806	3.3V AVR	33B
IC807	Reset IC	MCU reset signal
IC808	OP amplifier	HSD amplifier
IC810	EEPROM	EEPROM
IC811	OP amplifier	RX BPF tuning
IC812	Baseband IC	Audio processor
IC815	AF amplifier	Audio power amplifier
IC817	OP amplifier	VOX signal amplifier
IC820	MCU	Microcontroller unit
IC821	LCD driver	
Q2	RF buffer	PLL-IC input
Q3	Ripple filter	TX/RX VCO
Q4	Oscillator	RX VCO
Q5	Oscillator	TX VCO
Q6	DC switching	TX VCO switching
Q7	DC switching	RX VCO switching
Q8	RF buffer	VCO output
Q9	RF amplifier	VCO output
Q11,12	DC switching	Assist switching
Q201	RF amplifier	TX amplifier
Q203	RF amplifier	Pri-drive amplifier
Q204	FET amplifier	Drive amplifier
Q205	FET amplifier	Final power amplifier
Q301~306	DC switching	TX FET bias
Q403	Tripler	2nd local (16.8MHz x 3)
Q405	IF amplifier	1st IF (49.95MHz)
Q406	Mixer	1st mixer
Q407	RF amplifier	RX (VHF)
Q801	DC switching	Blue LED
Q802	DC switching	50T from 50M
Q803	DC switching	50R from 50M

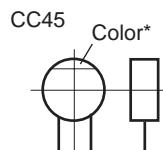

Ref. No.	Use / Function	Operation / Condition
Q804	DC switching	33MS from 33M
Q805	DC switching	Green/Red LED
Q806	DC switching	MCU clock shift circuit
Q809	DC switching	MIC mute
Q810,811	Amplifier	AGC control
Q813	DC switching	Q814 control
Q814	DC switching	AF power mute
Q815	Level converter	EXT PTT/RXD
Q816	Level converter	EXT TXD
Q817	DC switching	Pop noise mute
Q818,819	AF switching	AF power mute
Q820	DC switching	Q821 control
Q821	DC switching	Backlight LED
Q822	DC switching	EMG PTT
D6,7,9	Varicap	TX VCO tune
D10,12	Varicap	RX VCO tune
D13	Speed up	Ripple filter
D14	Varicap	TX VCO assist tune
D15	Varicap	RX VCO assist tune
D16	Varicap	Modulation
D17,18	Switching	TX-f/RX 1st local
D201~204	Switching	TX/RX ANT switching
D301	5.1V zone	Over voltage prevention
D404,405	Varicap	RX RF BPT tune
D407,408	Varicap	RX RF BPT tune
D801	LED (green)	Busy
D803	Protection	Power supply
D804	LED (blue)	Signal
D805	LED (red)	TX
D806	5.1V zener	Over voltage prevention
D807,808	Detection	MIC level
D809,810	Detection	VOX level
D817	Speed up	LCD back light
D818~821	LED (yellow)	Backlight
D824~828	LED (yellow)	Backlight
D829	Key input detect	Key1I input
D830	Key input detect	Key2I input
D831	Key input detect	Key3I input
D832	Key input detect	Key4I input

PACKING

Parts with the exploded numbers larger than 700 are not supplied.

ADJUSTMENT

Test Equipment Required for Alignment

Test Equipment	Major Specifications	
1. Standard Signal Generator (SSG)	Frequency Range Modulation Output	245 to 246MHz Frequency modulation and external modulation -127dBm/0.1µV to greater than -47dBm/1mV
2. RF Power Meter	Input Impedance Operation Frequency Measurement Range	50Ω 245 to 246MHz Vicinity of 10W
3. Deviation Meter	Frequency Range	245 to 246MHz
4. Digital Volt Meter (DVM)	Measuring Range Input Impedance	10mV to 10V DC High input impedance for minimum circuit loading
5. Oscilloscope		DC through 30MHz
6. High Sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 1000MHz 0.2ppm or less
7. DC Ammeter		5A
8. AF Volt Meter (AF VTVM)	Frequency Range Voltage Range	50Hz to 10kHz 1mV to 10V
9. Audio Generator (AG)	Frequency Range Output	50Hz to 5kHz or more 0 to 1V
10. Distortion Meter	Capability Input Level	3% or less at 1kHz 50mV to 10Vrms
11. Spectrum Analyzer	Measuring Range	DC to 1GHz or more
12. Tracking Generator	Center frequency Output Voltage	50kHz to 600MHz 100mV or more
13. 8Ω Dummy Load		Approx. 8Ω, 3W
14. Regulated Power Supply		5V to 10V, approx. 3A Useful if ammeter equipped

■ Antenna connector adapter

The antenna connector of this transceiver uses an SMA terminal.

Use an antenna connector adapter [SMA(f) – BNC(f) or SMA(f) – N(f)] for adjustment. (The adapter is not provided as an option, so buy a commercially-available one.)

■ Repair Jig (Chassis)

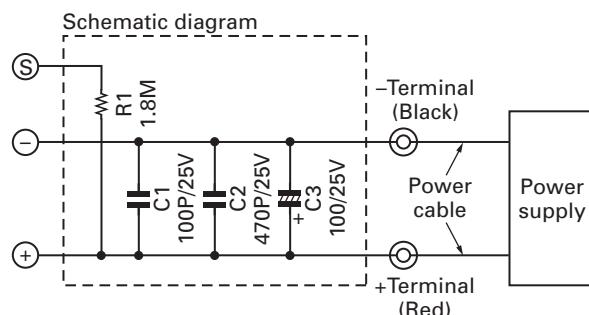

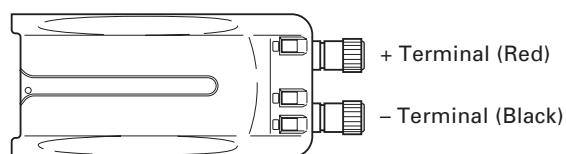

Use jig (part No.: A10-4215-03) for repairing the transceiver. Place the TX-RX unit on the jig and fit it with screws.

The jig facilitates the voltage check and protects the final amplifier FET when the voltage on the flow side of the TX-RX unit is checked during repairs.

■ Battery Jig (W05-1011-00)

Connect the power cable properly between the battery jig installed in the transceiver and the power supply, and be sure output voltage and the power supply polarity prior to switching the power supply ON, otherwise over voltage and reverse connection may damage the transceiver, or the power supply or both.

Note: When using the battery jig, you must measure the voltage at the terminals of the battery jig. Otherwise, a slight voltage drop may occur within the power cable, between the power supply and the battery jig, especially while the transceiver transmits.

ADJUSTMENT

Frequency and Signaling

The transceiver has been adjusted for the frequencies shown in the following table. When required, re-adjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

■ Frequency (MHz)

Channel No.	RX Frequency	TX Frequency
1	245.05000	245.10000
2	245.35000	245.30000
3	245.95000	245.90000
4	245.15000	245.15000
5	245.25000	245.25000
6	245.40000	245.40000
7~16	-	-

■ Signaling

Signaling No.	RX (Decode)	TX (Encode)
1	None	None
2	None	100Hz Square Wave
3	QT 67.0Hz	QT 67.0Hz
4	QT 151.4Hz	QT 151.4Hz
5	QT 210.7Hz	QT 210.7Hz
6	QT 254.1Hz	QT 254.1Hz
7	DQT D023N	DQT D023N
8	DQT D754I	DQT D754I
9	DTMF (Code: 159D)	DTMF (Code: 159D)
10	None	DTMF (Code: 9)
11	None	MSK (1010)
12	FleetSync (100~1000)	FleetSync (100~1000)
13	None	Single Tone (1000Hz)
14	2-tone (A: 304.7Hz, B: 3106.0Hz)	2-tone (A: 304.7Hz, B: 3106.0Hz)
15	None	DTMF Tone (1477Hz)
16	Single Tone (979.9Hz)	Single Tone (979.7Hz)
17	None	MSK PN9
18	None	DTMF (Code: 3)

Preparations for Tuning the Transceiver

Before attempting to tune the transceiver, connect the unit to a suitable power supply.

Whenever the transmitter is tuned, the unit must be connected to a suitable dummy load (i.e. power meter).

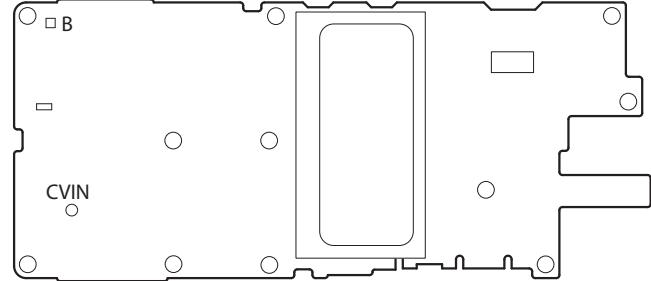

The speaker output connector must be terminated with a 8Ω dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during tuning.

■ Adjustment frequency (MHz)

TEST CH	RX	TX
Low	245.05000	245.10000
Low'	245.35000	245.30000
Center	245.55000	245.60000
High'	245.75000	245.70000
High	245.95000	245.90000

LEVEL DIAGRAM

Receiver Section

To make measurements in the AF section, connect the AC level meter.
 (ANT input: -53dBm, 1kHz FM, 1.5kHz Dev (Narrow)).
 In the RF section, use a high impedance probe. (ANT input: -53dBm, MOD off).

Transmitter Section

AG is set to the MIC input becomes 1.5kHz Dev, At 1kHz MOD. (Narrow)
 To make measurements in the AF section, connect the AC level meter.
 In the RF section, use a 1000pF coupling capacitor.

OPTIONAL ACCESSORIES

SPECIFICATIONS

General

Frequency Range	245~245.9875MHz
Channel Spacing	12.5kHz
PLL Channel Stepping.....	2.5kHz, 5kHz, 6.25kHz, 7.5kHz
Operating Voltage	7.5 V DC±20%
Battery Life	More than 12 hours at 5 watts (5-5-90 duty cycle with KNB-45L battery)
Operating Temperature range.....	-30°C to +60°C
Frequency Stability	±2.5ppm (-30°C to +60°C)
Dimensions and Weight (Dimensions not including protrusions)	
Radio Only.....	180g
With KNB-45L (2000mAh battery).....	54 W x 122.0 H x 33.7 D mm 300g

Receiver (Measurements made per TIA/EIA-603)

Sensitivity	
EIA 12dB SINAD	0.28μV
Selectivity	60dB
Intermodulation Distortion	60dB
Spurious response	70dB
Audio Output.....	500mW at 8Ω

Transmitter (Measurements made per TIA/EIA-603)

RF Output Power5W/1W
Spurious Response	70dB
Modulation	11K0F3E
FM Hum and Noise.....	40dB
Modulation Distortion.....	Less than 5%
