Firmware Copyrights

The title to and ownership of copyrights for firmware embedded in Kenwood product memories are reserved for Kenwood Corporation. Any modifying, reverse engineering, copy, reproducing or disclosing on an Internet website of the firmware is strictly prohibited without prior written consent of Kenwood Corporation. Furthermore, any reselling, assigning or transferring of the firmware is also strictly prohibited without embedding the firmware in Kenwood product memories.

Transceivers containing AMBE+2™ Vocoder:

The AMBE+2™ voice coding technology is embedded in the firmware under the license of Digital Voice Systems, Inc.

GENERAL

INTRODUCTION

SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions. These are issued as required.

ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts: components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

GENERAL

PERSONAL SAFETY

The following precautions are recommended for personal safety:

- DO NOT transmit if someone is within two feet (0.6 meter) of the antenna.
- DO NOT transmit until all RF connectors are secure and any open connectors are properly terminated.
- SHUT OFF this equipment when near electrical blasting caps or while in an explosive atmosphere.
- All equipment should be properly grounded before power-up for safe operation.
- This equipment should be serviced by only qualified technicians.

PRE-INSTALLATION CONSIDERATIONS

1. UNPACKING

Unpack the radio from its shipping container and check for accessory items. If any item is missing, please contact KENWOOD immediately.

2. LICENSING REQUIREMENTS

Federal regulations require a station license for each radio installation (mobile or base) be obtained by the equipment owner. The licensee is responsible for ensuring transmitter power, frequency, and deviation are within the limits permitted by the station license.

Transmitter adjustments may be performed only by a licensed technician holding an FCC first, second or general class commercial radiotelephone operator's license. There is no license required to install or operate the radio.

3. PRE-INSTALLATION CHECKOUT

3-1. Introduction

Each radio is adjusted and tested before shipment. However, it is recommended that receiver and transmitter operation be checked for proper operation before installation.

3-2. Testing

The radio should be tested complete with all cabling and accessories as they will be connected in the final installation. Transmitter frequency, deviation, and power output should be checked, as should receiver sensitivity, squelch operation, and audio output. Signaling equipment operation should be verified.

4. PLANNING THE INSTALLATION

4-1. General

Inspect the vehicle and determine how and where the radio antenna and accessories will be mounted.

Plan cable runs for protection against pinching or crushing wiring, and radio installation to prevent overheating.

4-2. Antenna

The favored location for an antenna is in the center of a large, flat conductive area, usually at the roof center. The trunk lid is preferred, bond the trunk lid and vehicle chassis using ground straps to ensure the lid is at chassis ground.

4-3. Radio

The universal mount bracket allows the radio to be mounted in a variety of ways. Be sure the mounting surface is adequate to support the radio's weight. Allow sufficient space around the radio for air cooling. Position the radio close enough to the vehicle operator to permit easy access to the controls when driving.

4-4. DC Power and wiring

1. This radio may be installed in negative ground electrical systems only. Reverse polarity will cause the cable fuse to blow. Check the vehicle ground polarity before installation to prevent wasted time and effort.
2. Connect the positive power lead directly to the vehicle battery positive terminal. Connecting the Positive lead to any other positive voltage source in the vehicle is not recommended.
3. Connect the ground lead directly to the battery negative terminal.
4. The cable provided with the radio is sufficient to handle the maximum radio current demand. If the cable must be extended, be sure the additional wire is sufficient for the current to be carried and length of the added lead.

5. INSTALLATION PLANNING – CONTROL STATIONS

5-1. Antenna system

Control station. The antenna system selection depends on many factors and is beyond the scope of this manual. Your KENWOOD dealer can help you select an antenna system that will best serve your particular needs.

5-2. Radio location

Select a convenient location for your control station radio which is as close as practical to the antenna cable entry point. Secondly, use your system's power supply (which supplies the voltage and current required for your system). Make sure sufficient air can flow around the radio and power supply to allow adequate cooling.

SERVICE

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained in this manual.

NOTE

You must use KPG-95DG version 6.10 or later for this transceiver.

TK-5810(BG)/5810H(BG)

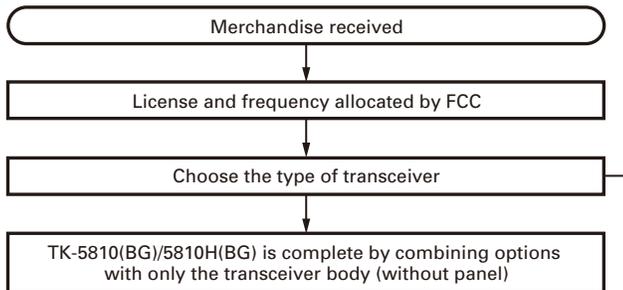

SYSTEM SET-UP

Before Reading About System Set-up

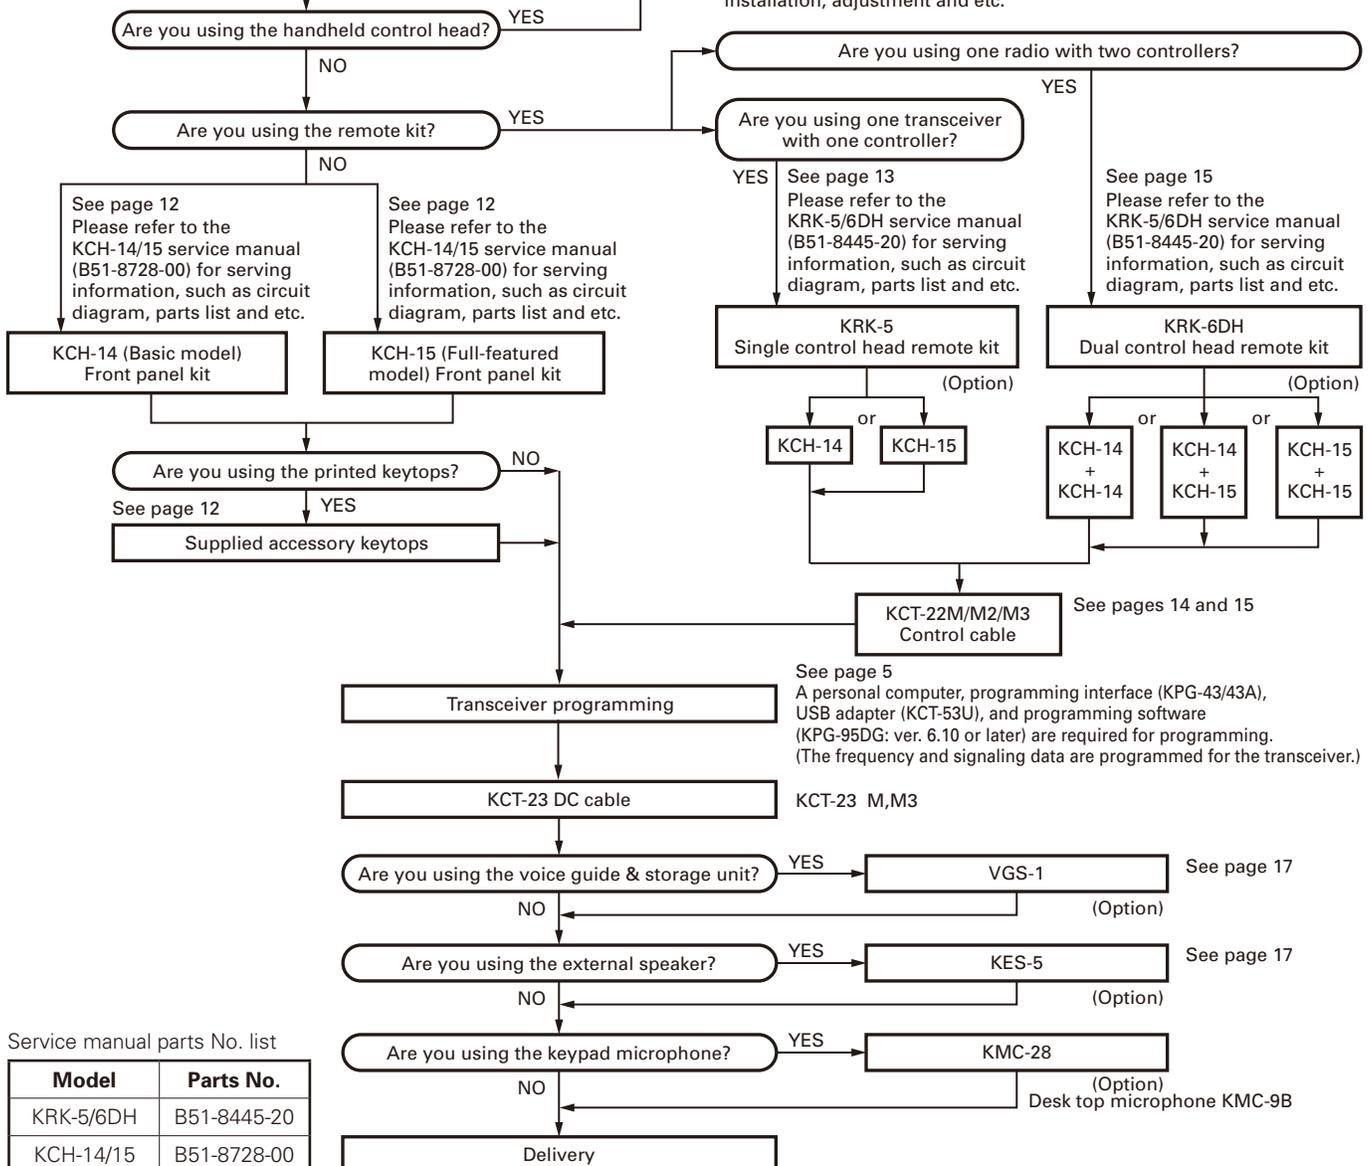

The TK-5810(BG)/5810H(BG) is a transceiver main unit (without a panel or speaker) that you complete by adding options.

The options are classified into three types according to operation and function.

1. Install the front panel kit (controller) directly on a radio to operate it. (Form: Radio + KCH-14/15)
2. Remotely control one radio with one controller. (Form: Radio + KRK-5 + KCH-14/15 + KCT-22M/M2/M3)
3. Remotely control one radio with two controllers. (Form: Radio + KRK-6DH + KCH-14/15 (two) + KCT-22M/M2/M3 (two))

Type	Frequency range	RF power
TK-5810(BG) K	450~520MHz	45W~5W
TK-5810(BG) K2	400~470MHz	45W~5W
TK-5810H(BG) K	450~500MHz	100W~50W
	500~520MHz	60W~50W
TK-5810H(BG) K2	400~470MHz	100W~50W

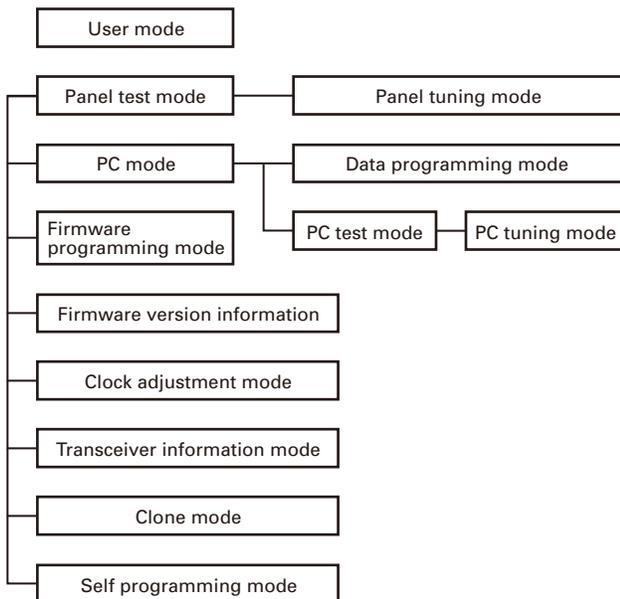

Service manual parts No. list

Model	Parts No.
KRK-5/6DH	B51-8445-20
KCH-14/15	B51-8728-00
KCH-16	B51-8834-00

REALIGNMENT

1. Modes

Mode	Function
User mode	For normal use.
Panel test mode	Used by the dealer to check the fundamental characteristics.
Panel tuning mode	Used by the dealer to tune the transceiver.
PC mode	Used for communication between the transceiver and PC.
Data programming mode	Used to read and write frequency data and other features to and from the transceiver.
PC test mode	Used to check the transceiver using the PC. This feature is included in the FPU. See panel tuning.
Firmware programming mode	Used when changing the main program of the flash memory.
Firmware version information	Used to confirm the internal firmware version.
Clock adjustment mode	Used by the dealer to adjust date and time.
Transceiver information mode	Used to confirm the transceiver firmware version.
Clone mode	Used to transfer programming data from one transceiver to another.
Self programming mode	Frequency, signaling and features write to the transceiver.

2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
Panel test mode	[PF1] + Power ON
PC mode	Received commands from PC
Panel tuning mode	[Panel test mode] + [GRP\wedge]
Firmware programming mode	[PF2] + Power ON
Firmware version information	[PF3] + Power ON
Clock adjustment mode	[PF4] + Power ON
Transceiver information mode	[PF1] + [PF3] + Power ON
Clone mode	[PF5] + Power ON
Self programming mode	[GRP\wedge] + Power ON

3. Panel Test Mode

Setting method refer to ADJUSTMENT.

4. Panel Tuning Mode

Setting method refer to ADJUSTMENT.

5. PC Mode

5-1. Preface

The transceiver is programmed by using a personal computer, programming interface (KPG-43/43A), USB adapter (KCT-53U) and programming software (KPG-95DG: ver. 6.10 or later).

The programming software can be used with a PC. Figure 1 shows the setup of a PC for programming.

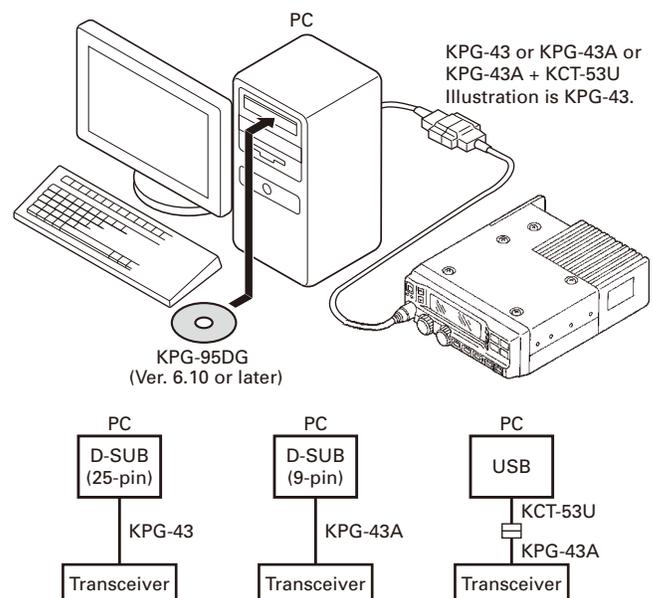

Fig. 1

TK-5810(BG)/5810H(BG)

REALIGNMENT

5-2. Connection procedure

1. Connect the transceiver to the computer using the interface cable and USB adapter (When the interface cable is KPG-43A, the KCT-53U can be used.).

Note:

- You must install the KCT-53U driver in the computer to use the USB adapter (KCT-53U).
- When using the USB adapter (KCT-53U) for the first time, plug the KCT-53U into a USB port on the computer with the computer power ON.

2. When the POWER switch on, user mode can be entered immediately. When PC sends command the transceiver enter PC mode, and "PROGRAM" is displayed on the LCD. When data transmitting from transceiver, the red LED is lights. When data receiving to transceiver, the green LED is lights.

Note:

The data stored in the computer must match the "Model Name and Market Code" when it is written into the flash memory.

5-3. KPG-43/KPG-43A description

(PC programming interface cable: Option)

The KPG-43/43A is required to interface the transceiver to the computer. It has a circuit in its D-sub connector (KPG-43: 25-pin, KPG-43A: 9-pin) case that converts the RS-232C logic level to the CMOS level.

The KPG-43/43A connects the microphone jack of the transceiver to the RS-232C serial port of the computer.

5-4. KCT-53U description (USB adapter: Option)

The KCT-53U is a cable which connects the KPG-43A to a USB port on a computer.

When using the KCT-53U, install the supplied CD-ROM (with driver software) in the computer. The KCT-53U driver runs under Windows 2000, XP or Vista (32-bit).

5-5. Programming software KPG-95DG description

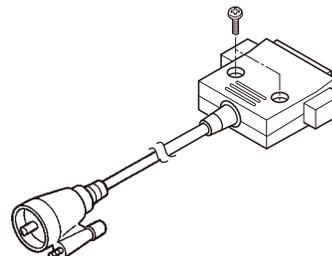

The KPG-95DG (ver. 6.10 or later) is the programming software for the transceiver supplied on a CD-ROM. This software runs under Windows 98, ME, Windows NT4.0, 2000, XP or Vista (32-bit) on a PC.

The data can be input to or read from the transceiver and edited on the screen. The programmed or edited data can be printed out. It is also possible to tune the transceiver.

6. PC Tuning Mode

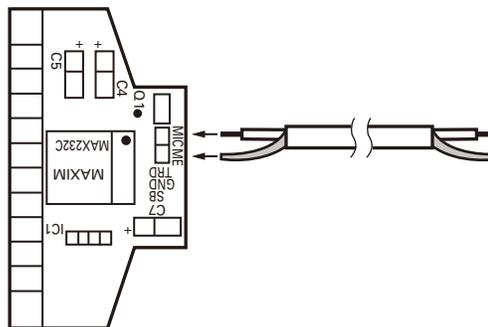

When making adjustment while in PC tuning mode, modify the KPG-43/43A programming interface cable as described below.

1. Remove the two screws from the plug cover, then lift the cover from the plug.

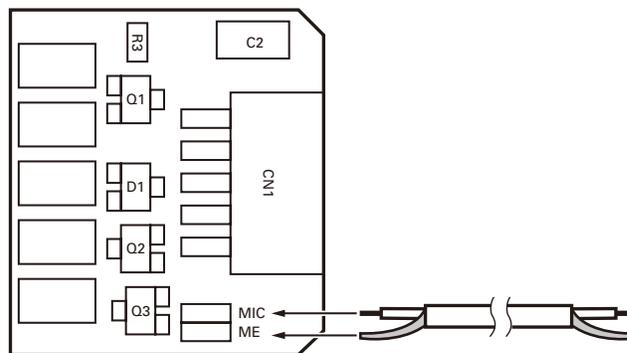

2. Solder the lead wire onto the MIC tab on the PCB, and the ground wire onto the ME tab.

- KPG-43

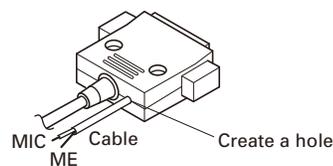

- KPG-43A

- 3.

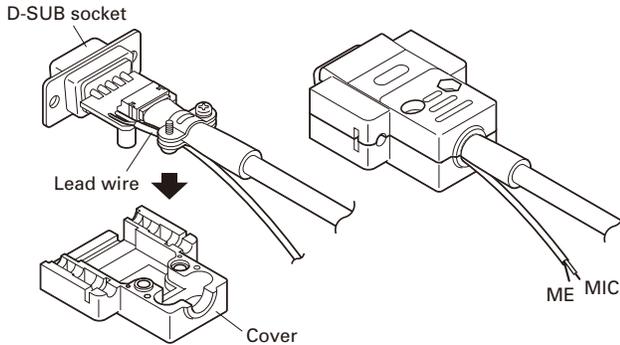

- KPG-43

Create a hole in the casing (as shown in the illustration) then fit the cable into the hole. Replace the cover and secure it using the two screws.

REALIGNMENT

- KPG-43A
Install the D-SUB socket into the cover after aligning the lead wire as shown in the figure.
Replace the cover and secure it using the two screws.

7. Firmware Programming Mode

7-1. Preface

Flash memory is mounted on the transceiver. This allows the transceiver to be upgraded when new features are released in the future. (For details on how to obtain the firmware, contact Customer Service.)

7-2. Connection procedure

Connect the transceiver to the personal computer (PC) using the interface cable (KPG-43/43A) and USB adapter (KCT-53U: When the interface cable is KPG-43A, the KCT-53U can be used.). (Connection is the same as in the PC Mode.)

7-3. Programming

1. Start up the firmware programming software (Fpro.exe).
2. Set the communications speed (normally, 115200 bps) and communications port in the configuration item.
3. Set the firmware to be updated by File name item.
4. Press and hold the [PF2] key while turning the transceiver power ON. Then, the orange LED on the transceiver lights and "PROGRAM FIRM" is displayed.
5. Check the connection between the transceiver and the personal computer, and make sure that the transceiver is in the Program mode.
6. Press "write" button in the window. When the transceiver starts to receive data, the [PG] display is blinking.
7. If writing ends successfully, the checksum is calculated and a result is displayed.
8. If you want to continue programming other transceivers, repeat steps 4 to 7.

Note:

- This mode cannot be entered if the Firmware Programming mode is set to Disable in the Programming software.

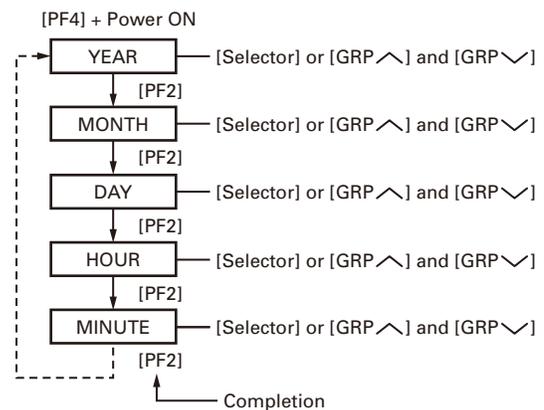

- These transceivers use firmware versions G5.10 or later. When using firmware versions earlier than version G5.10, a "Check connection" error message will appear on the LCD. Firmware versions earlier than version G5.10 will not write to the transceiver.
- While the firmware is being written, if the transceiver resets due to a power supply interruption or other problem, the LCD may not display correctly (for example, "PROGRAM FIRM" may not display). Additionally, transceiver keys other than the power switch cannot be operated. To return to normal operation, click the "Cancel" button in the firmware programming software, then turn the transceiver power OFF and back ON. "PROGRAM FIRM" reappears on the display and the transceiver keys can be operated. However, the previously written firmware data is lost; you must write the firmware using the firmware programming software again.

8. Firmware Version Information

Press and hold the [PF3] key while turning the transceiver power ON and then keep pressing and holding the [PF3] key, the firmware version information appears on the LCD.

9. Clock Adjustment Mode

9-1. Flow chart of operation

10. Transceiver Information Mode

Use this function to confirm the transceiver firmware version.

1. Press and hold the [PF1] and [PF3] keys while turning the transceiver power ON.
2. The transceiver firmware version appears on the LCD.
3. To exit the transceiver information mode, turn the transceiver power OFF.

REALIGNMENT

11. Clone Mode

Programming data can be transferred from one transceiver to another by connecting them via their microphone jacks. The operation is as follows (the transmit transceiver is the source and the receive transceiver is a target).

The following data cannot be cloned.

- Tuning data
- Embedded message with password
- Model name data
- ESN (Electronic Serial Number) data
- Network file data (P25)

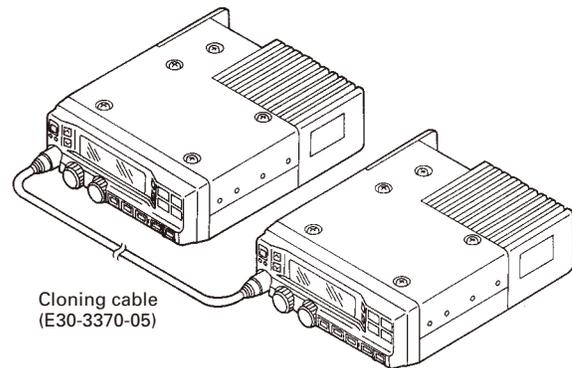

Key guide on the "INPUT PASSWORD" display.

1. Press and hold the [PF5] key while turning the transceiver power ON. If the Read authorization password is set to the transceiver, the transceiver displays "CLONE LOCK". If the password is not set, the transceiver displays "CLONE MODE".
2. When you enter the correct password, and "CLONE MODE" is displayed, the transceiver can be used as the cloning source. The following describes how to enter the read authorization password.
3.
 - **How to enter the read authorization password using the microphone keypad;**
If one of keys 0 to 9 is pressed while "CLONE LOCK" is displayed, the pressed number is displayed on the LCD. Each press of the key shifts the display in order to the left.
If you press the [#] key, the least digit of the password is deleted.
When you enter the password and press the [*] key, "CLONE MODE" is displayed if the entered password is correct. If the password is incorrect, "CLONE LOCK" is redisplayed.
 - **How to enter the read authorization password using the [Selector] knob;**
If the [Selector] knob is rotated while "CLONE LOCK" is displayed, the number (0 to 9) flashes on the LCD. When you press the [GRP^] key, the currently selected number is determined. If you press the [PF3] key, the least digit of the password is deleted. If you press the [PF2] key after entering the password in this procedure, "CLONE MODE" is displayed if the entered password is correct. If the password is incorrect, "CLONE LOCK" is redisplayed.
4. Power ON the target transceiver.
5. Connect the cloning cable (part No. E30-3370-05) to the microphone jacks on the source and target.
6. Press the [PF2] key on the source while the source displays "CLONE MODE". The data of the source is sent to the target. While the target is receiving the data, "PROGRAM" is displayed. When cloning of data is completed, the source displays "END", and the target automatically operates in the User mode. The target can then be operated by the same program as the source.

7. The other target can be continuously cloned. When the [PF2] key on the source is pressed while the source displays "END", the source displays "CLONE MODE". Carry out the operation in step 4 to 6.

Note:

- You cannot clone transceivers using hardware versions 1.0 or 2.0.
Cloning is only possible when both transceivers are using hardware version 3.0.
- Cannot be cloned if the overwrite password is programmed to the target.
- "Model Name and Market Code", "Head Configuration" and "Head Type" must be same to clone the transceiver. However, it may be unable to clone the transceiver depending on the enhanced features settings. (Refer to the FPU for the enhanced features details.)
- Under certain conditions, clone mode cannot be activated even if the clone mode of the source transceiver, using Hardware Version 3.0, is set to enable. Refer to the FPU for more details.
- Can not clone if the checksum in the Network File area of the source transceiver and the target transceiver is different.

REALIGNMENT

12. Self Programming Mode

Write mode for frequency data and signaling etc. To be used ONLY by the authorized service person maintaining the user's equipment. After programming, reset the FPU to the "Self- Programming" disabled mode. Transceivers CANNOT be delivered to the end-user in the self-programming mode.

The following setup items in the channels programmed by the FPU can be changed using the self-programming mode. The addition of new channel and the deletion of channel that has already been programmed by the FPU cannot be performed using the self-programming mode.

- RX Frequency
- TX Frequency
- Channel Type (ANALOG or MIXED)
- TX Mode (When the channel type is selected "MIXED".)
- Channel Spacing
- RX Signaling
- TX Signaling
- RX NAC
- TX NAC
- Talkgroup List No.

Note:

The personality will be also changed when the above-mentioned items is changed. (Refer to the FPU for the personality details.)

12-1. Enter to the self programming mode

Press and hold the [GRP\wedge] key while turning the transceiver power ON. Ignoring whether the Read authorization password is set or not, "PASSWORD" appears.

If the Read authorization password is not set to the transceiver, "SELF PG MODE" is displayed on the LCD when the [PF2] key is pressed while "PASSWORD" is displayed.

If the password is set to the transceiver, "SELF PG MODE" is displayed on the LCD when you enter the correct password while "PASSWORD" is displayed.

For the password input method, see "11. Clone Mode" step3 described on page 8.

Note:

This mode (self programming mode) cannot be set when it has been disabled with the FPU.

12-2. Data writing

Before moving to the next Zone/Channel, "KEEP THIS CHANGE?" appears on the LCD, if you select "YES", the new data is written to memory. IF you select "NO", the new data will not be written; the new data will be erased.

12-3. Setup items for self programming mode

No.	Setup item	Display	Remarks
1	Select Zone/Channel	*** - ***	Zone: 1~100, Channel: 1~512
2	RX Frequency	***.*****MHz	Receive frequency
3	TX Frequency	***.*****MHz	Transmit frequency
4	Channel Type	TYPE	ANALOG/P25/MIXED
5	TX Mode	MODE	ANALOG/P25
6	Channel Spacing	SPACE	25.0kHz/12.5kHz (When the Channel type is selected "ANALOG" or "MIXED".) "P25 12.5kHz"
7	RX Signaling	RX-SIG	Receive QT/DQT
8	TX Signaling	TX-SIG	Transmit QT/DQT
9	RX NAC	RX-NAC***	000~FFF (Hexadecimal) Note: "F7F" cannot be set.
10	TX NAC	TX-NAC***	000~FFF (Hexadecimal) Note: "F7E" and "F7F" cannot be set.
11	Talkgroup List No.	None	When you do not want to set the Talkgroup list number to the transceiver.
		***	Talkgroup list number (1~250) (When the Talkgroup list name is not set to the transceiver.)
		*****	Talkgroup list name (12 digits) (When the Talkgroup list name is set to the transceiver.)

INSTALLATION

1. Front Panel Kit (KCH-14/15: Option)

1-1. Installing the KCH-14/15 front panel kit to the transceiver

1. Remove the upper case and lower case of the transceiver.
2. Insert the lead wire with connector (W700) of the control unit (X53-440) into the connector (CN1) of the KCH-14 or KCH-15.
3. Install the KCH-14 or KCH-15 on the transceiver using the four screws ① supplied with the front panel kit.

Note:

Take care that the lead wire with connector (W700) is not caught when fitting the KCH-14 or KCH-15 on the transceiver. (You can install the panel upside down if necessary to install the transceiver.)

4. Affixing the sheet (G11-4379-04) for the waterproof (Fig.1-1-2).

(1) Remove the covering paper of the sheet ②.

(2) Affix the sheet while taking note of the position of the three parts as shown in Fig.1-1-2 ③.

Firmly affix the sheet to the chassis by pushing the double-coated tape with your fingers.

(3) Repeat step (2) to affix the sheet to the other side of chassis.

Note:

The sheet cannot be reused. Affix a new sheet when you removed the sheet.

5. Reassemble the upper case and lower case. (Refer to page 18)

Note:

Take care that the sheet (G11-4379-04) is not peeled off when installing the upper/lower case.

6. Connect the short plug to the accessory connector (9-pin) on the rear of the transceiver.

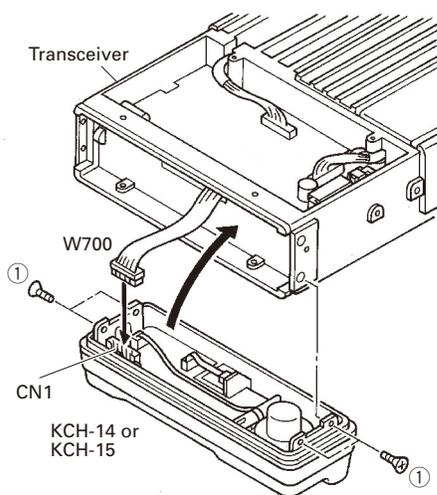

Fig. 1-1-1

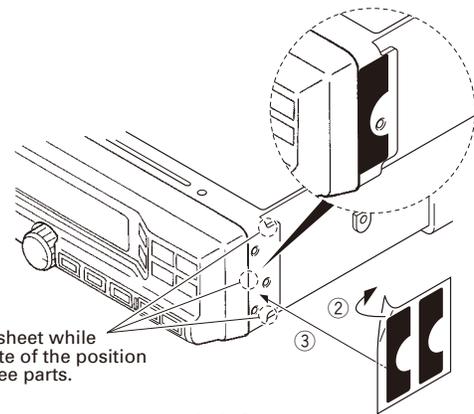

Fig. 1-1-2

1-2. Installing the accessory keytops to the front panel kit

When a function is set by the programming software (KPG-95DG), the key legend can be changed by inserting the accessory keytops into PF1 to PF9 of the KCH-15 (PF1 to PF5: KCH-14). The accessory contains 60 keytops as shown the table below.

INSTALLATION

KCH-14

KCH-15

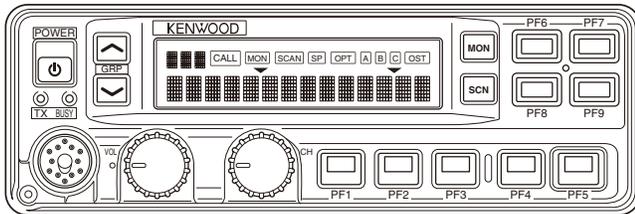

Fig. 1-3

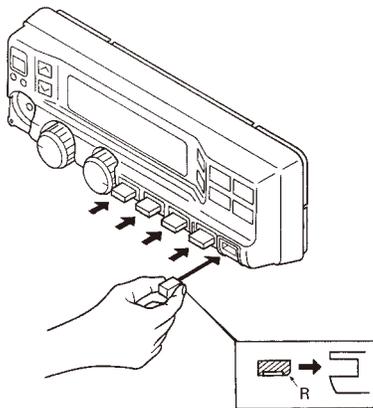

Fig. 1-4 Keytop insertion

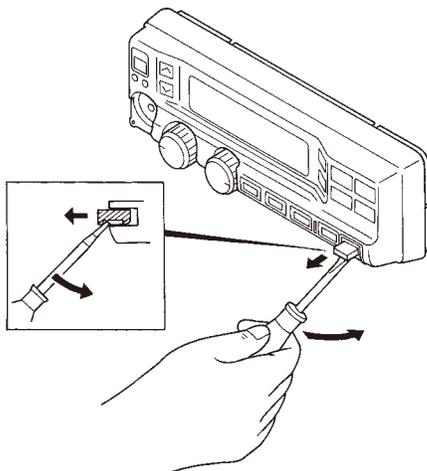

Fig. 1-5 Keytop removal

2. Remote kit (KRK-5: Option)

The KRK-5 remote kit is used to remotely operate the transceiver. The KRK-5 is connected to the KCH-14 or KCH-15 with an optional KCT-22M (8 feet), KCT-22M2 (17 feet), or KCT-22M3 (25 feet) control cable.

2-1. Installing the KRK-5 main panel onto the transceiver

1. Remove the upper case and lower case of the transceiver.
2. Insert the lead wire with connector (W700) of the control unit (X53-440) into the connector (CN4) of the KRK-5.
3. Install the KRK-5 main panel on the transceiver using four screws ①.

Note:

Take care that the lead wire with connector (W700) is not caught when fitting the KRK-5 main panel on the transceiver.

4. Affixing the sheet (G11-4379-04) for the waterproof (Fig.2-1-2).

(1) Remove the covering paper of the sheet ②.

(2) Affix the sheet while taking note of the position of the three parts as shown in Fig.2-1-2 ③.

Firmly affix the sheet to the chassis by pushing the double-coated tape with your fingers.

(3) Repeat step (2) to affix the sheet to the other side of chassis.

Note:

The sheet cannot be reused. Affix a new sheet when you removed the sheet.

5. Reassemble the upper case and lower case of the transceiver. (Refer to page 18)

Note:

Take care that the sheet (G11-4379-04) is not peeled off when installing the upper/lower case.

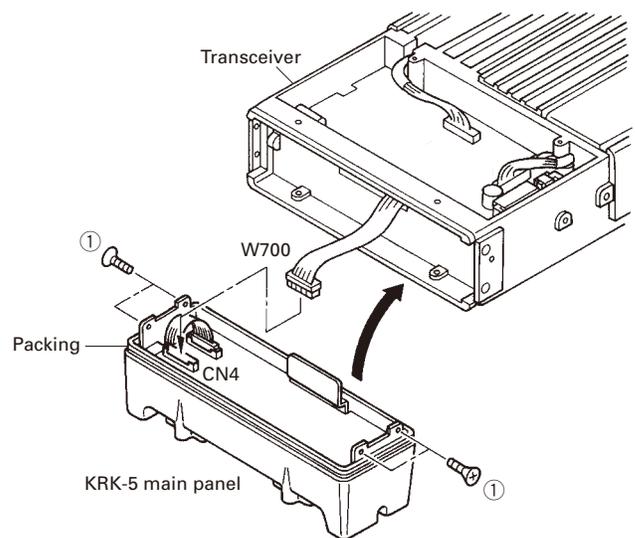

Fig. 2-1-1

INSTALLATION

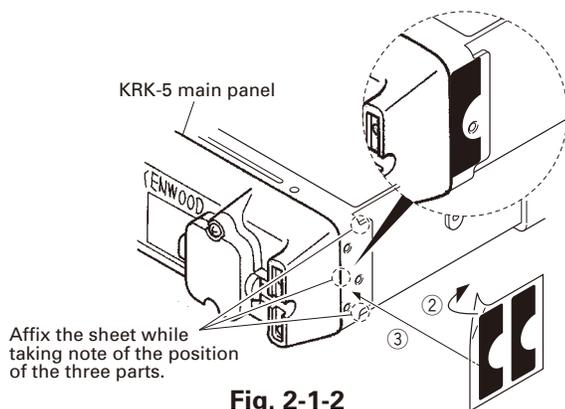

Fig. 2-1-2

2-2. Installing the KRK-5 rear panel onto the front panel kit

The following steps apply to both the KCH-14 and KCH-15.

1. Remove three screws ① on the KRK-5 rear panel, then remove the KRK-5 sub panel.
2. Insert the lead wire with connector (W102) of the KRK-5 into the connector (CN1) of the front panel kit ②.
3. Insert the lead wire with connector (W103) of the KRK-5 into the connector (CN3) of the front panel kit ③.
4. Make a slight cut in the end of the rubber cap ④.
5. Slide the lead wire of the connector wiring ⑤ through the slit in the rubber cap ⑥.
6. Insert the rubber cap into the hole of the KRK-5 rear panel ⑦.
7. Insert the connector ⑧ to the ACC connector ⑨ on the KRK-5 sub panel as shown by the arrow ⑩.
8. Install the KRK-5 sub panel onto the sub panel of the front panel kit ⑪.
9. Install the KRK-5 sub panel to the sub panel of the front panel kit using four screws ⑫.
10. Reinstall the KRK-5 rear panel using three screws removed in step 1.
11. Use a wire band to secure the lead wire at the end of the rubber cap ⑬.

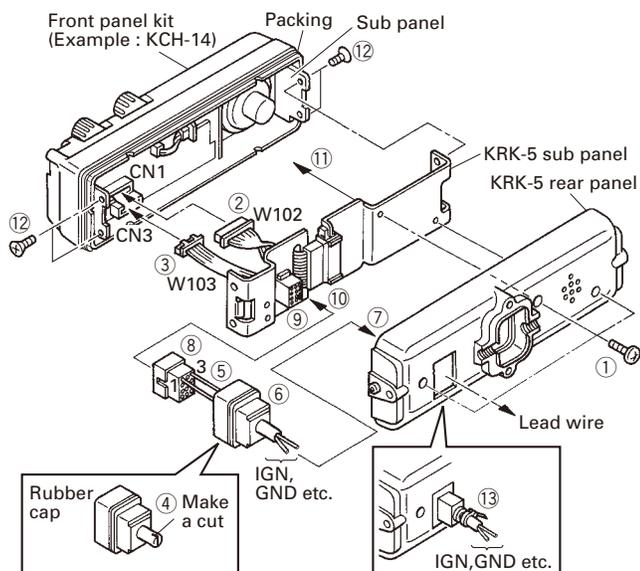

Fig. 2-2

2-3. Control cable (KCT-22) connection (Fig. 2-3)

1. Insert one connector of the control cable to the transceiver (with KRK-5) and the other to the display. Connect the cable to the GND terminal with the screw ① supplied with the control cable.
2. Secure the one connector of the control cable to the KRK-5 main panel with two screws ② according to the installation condition of the transceiver. Secure the control cable to the KRK-5 main panel with the cable fitting (J21-4354-04) and two screws ③ supplied with the KRK-5.
3. Secure the other connector of the control cable to the display with two screws ④ in the same way.

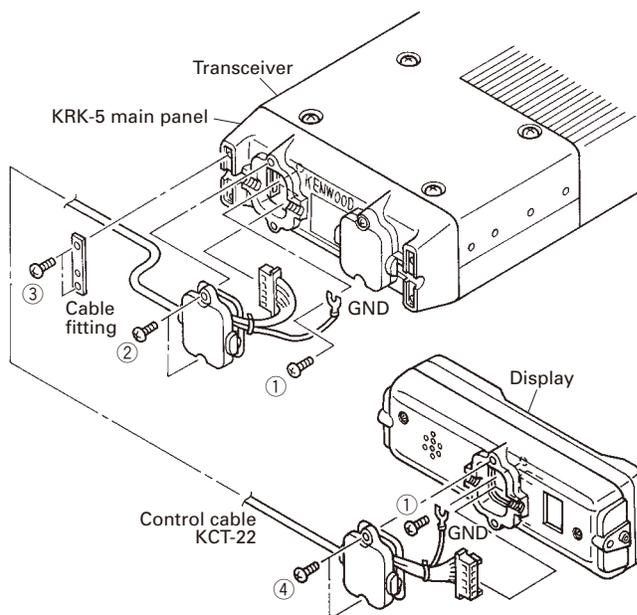

Fig. 2-3

2-4. Display installation (Fig. 2-4)

1. Install the display with the angle bracket (J29-0648-03) ① and two screws (N08-0526-04) ② supplied with the KRK-5.

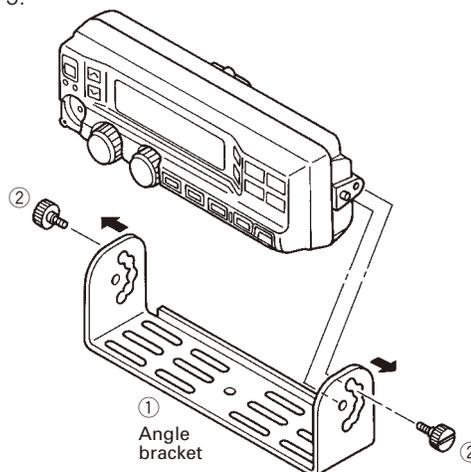

Fig. 2-4

INSTALLATION

3. Dual Control Head Remote Kit (KRK-6DH: Option)

The KRK-6DH remote kit connects two displays (two KCH-14s or KCH-15s) to the transceiver. The KRK-6DH is connected to the KCH-14s or KCH-15s with two optional control cables. There are three version of the control cable: KCT-22M (8 feet), KCT-22M2 (17 feet), and KCT-22M3 (25 feet).

3-1. Installing the KRK-6DH main panel onto the transceiver

1. Remove the upper case and lower case of the transceiver.
2. Insert the lead wire with connector (W700) of the control unit (X53-440) into the connector (CN4) of the KRK-6DH. Insert the lead wire with connector (W104) of the KRK-6DH into the connector (CN503) of the transceiver.
3. Install the KRK-6DH main panel on the transceiver using four screws ①.

Note:

Take care that the lead wire with connector (W700) is not caught when fitting the KRK-6DH main panel on the transceiver.

4. Affixing the sheet (G11-4379-04) for the waterproof (Fig.3-1-2).
 - (1) Remove the covering paper of the sheet ②.
 - (2) Affix the sheet while taking note of the position of the three parts as shown in Fig.3-1-2 ③.
Firmly affix the sheet to the chassis by pushing the double-coated tape with your fingers.
 - (3) Repeat step (2) to affix the sheet to the other side of chassis.

Note:

The sheet cannot be reused. Affix a new sheet when you removed the sheet.

5. Reassemble the upper case and lower case of the transceiver. (Refer to page 18)

Note:

Take care that the sheet (G11-4379-04) is not peeled off when installing the upper/lower case.

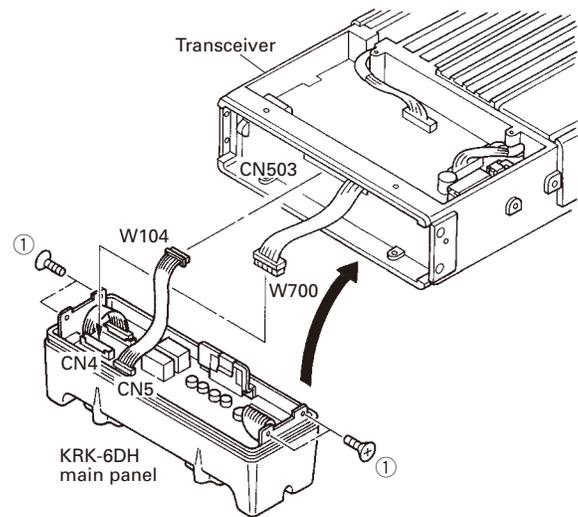

Fig. 3-1-1

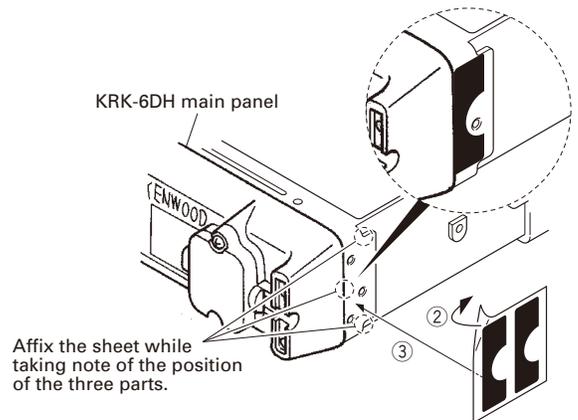

Fig. 3-1-2

3-2. Installing two KRK-6DH rear panels onto two front panel kits

Install each KRK-6DH rear panel onto each front panel kit as same as "2-2. Install the KRK-5 rear panel onto the front panel kit" described on page 14.

3-3. Control cable (KCT-22) connection (Fig. 3-2)

1. Use two control cables. Insert one connector of the one control cable to the transceiver (with KRK-6DH) and the other to the display 1.
Insert one connector of the other control cable to the transceiver (with KRK-6DH) and the other to the display 2. Connect each cable to the GND terminal with the screws ① supplied with each control cable.
2. Secure the one connector of each control cable to the KRK-6DH main panel with two screws ② according to the installation condition of the transceiver. Pass the control cables through the grooves at both ends of the KRK-6DH main panel and secure the control cables to the KRK-6DH with the cable fitting (J21-4354-04) and two screws ③ supplied with the KRK-6DH.
3. Secure the other connectors of the control cables to the display 1 and display 2 with two screws ④ in the same way.

INSTALLATION

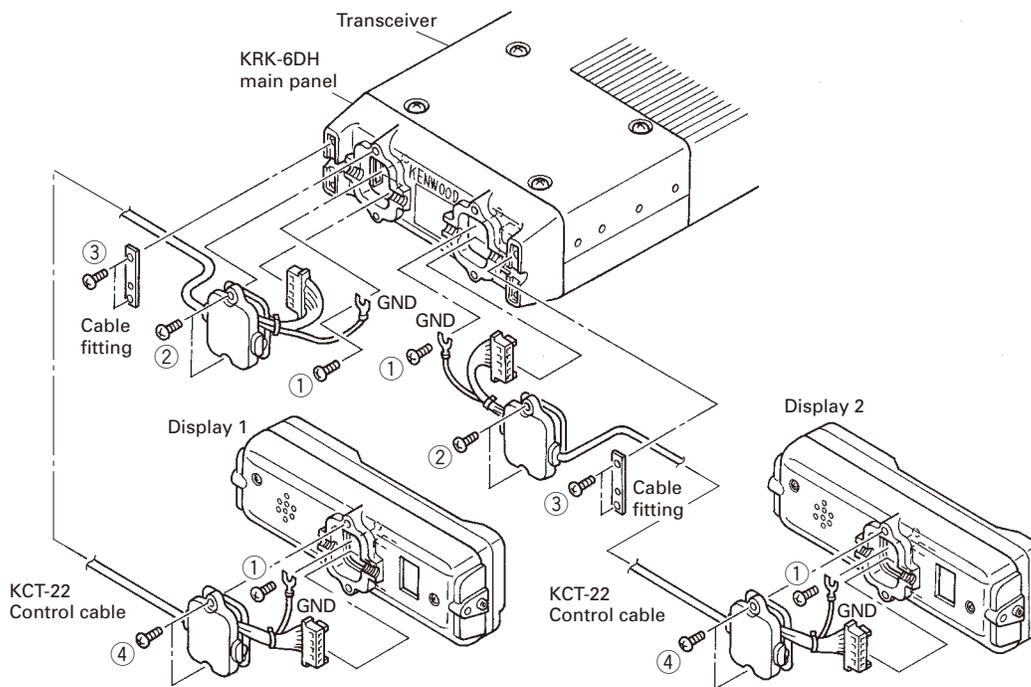

Fig. 3-2

4. Ignition Sense Cable (KCT-18: Option)

The KCT-18 is an optional cable to use the following functions:

- **Ignition function**

The ignition function allows you to turn the transceiver's power on and off with the ignition key of your car. When you are driving with the ignition key on, the horn alert function is disabled.

- **Timed power-off function**

The timed power-off function turns the transceiver's power off the time specified with the programming software (KPG-95DG) after the ignition key is turned off. When you are driving with the ignition key on, the horn alert function is disabled.

The ignition sense function and the timed power-off function can be used at the same time.

4-1. Connecting the KCT-18 cable to the transceiver

1. Remove the short plug from the accessory connector (9-pin) on the rear of the transceiver.
2. Insert the KCT-18 lead terminal into pin 1 (IGN) of the short plug (9-pin).
3. Connect the short plug to the accessory connector (9-pin) on the rear of the transceiver.

Note:

You must setup using the KPG-95DG.

4-2. Connecting the KCT-18 cable to the KRK-5/6DH remote kit

1. Remove the square plug from the accessory connector (12-pin) on the rear of the control head.
2. Cut off the end of the rubber cap (accessory), insert the KCT-18 lead terminal into the rubber cap, and insert it into pin 1 (IGN) of the square plug.
3. Connect the square plug and rubber cap to the accessory connector (12-pin) on the rear of the control head, then clamp the bottom of the rubber cap with the supplied tie wrap.

Note:

You must setup using the KPG-95DG.

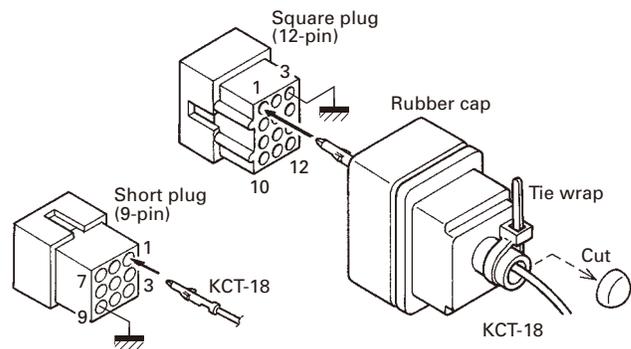

Fig. 4-1

Fig. 4-2

INSTALLATION

5. Voice Guide & Storage Unit (VGS-1: Option)

5-1. Installing the VGS-1 unit in the transceiver

1. Remove the upper case and upper packing of the transceiver.
2. Attach two cushions to the VGS-1 as shown in figure.

Note:

Be sure not to cover the VGS-1 connector (CN1) with the cushion.

3. Insert the VGS-1 connector (CN1) into the control unit connector (CN411).

Note:

You must setup using the KPG-95DG.

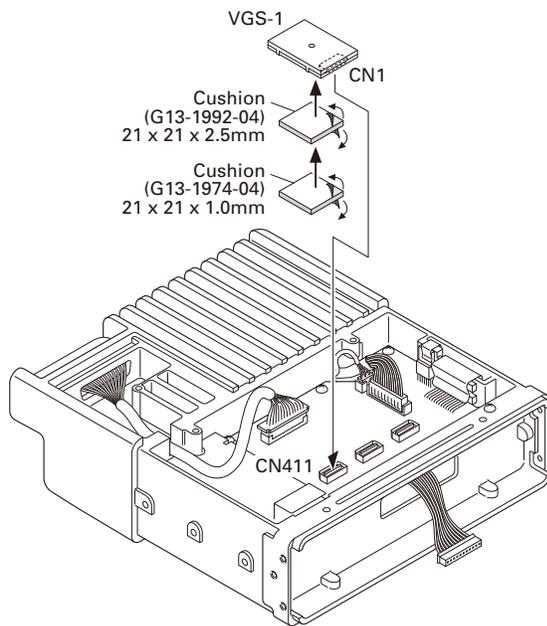

Fig. 5

6. External Speaker (KES-5: Option)

The speaker output from the transceiver is as follows:

1. The KCH-14 has a built-in speaker (3W/8 ohms).
2. The KCH-15 does not have a built-in speaker.
3. The external speaker output from the accessory connector (9-pin) on the rear of the transceiver is 13W/4 ohms. Use the KES-5.
4. The speaker output from the accessory connector (12-pin) on the rear of the control head is 2W/4 ohms. If the remote kit (KRK-5, KRK-6DH) is used, use the KES-5.

Note:

Since the transceiver uses a BTL audio amplifier, do not ground the speaker output pin.

6-1. Connecting the KES-5 external speaker to the transceiver

- **When taking the AF output from the accessory connector (9-pin) on the rear of the transceiver**

The following tools are required for changing the connector.

Extracting tool

The following extracting tool is recommended :
Molex Inc. Order No.: 11-03-0002

1. Remove the short plug from the accessory connector (9-pin) on the rear of the transceiver (Fig. 6-1-1).
Note: Save the jumper, which is required when the transceiver is used without the external speaker.
2. Remove the terminals with the jumper from the connector housing holes number 3 and 6 using the extracting tool.

Removing the jumper lead (Fig. 6-1-2)

- 1) Insert the extracting tool (11-03-0002) into the connector while pushing the jumper lead in the direction of (a).
- 2) Push the extracting tool into collapse the barbs of the crimp terminal.
- 3) Pull out the lead while continuing to push the extracting tool in the direction (b).
3. Reinsert the terminal with the black and white stripe lead into hole number 2, and the terminal with the black lead into hole number 6 (Fig. 6-1-3).
4. Connect the short plug to the accessory connector (9-pin) on the rear of the transceiver.

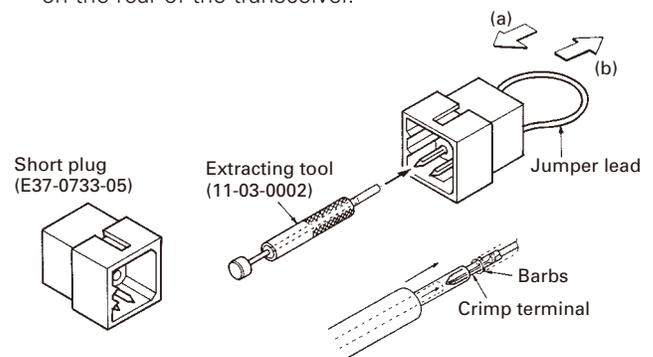

Fig. 6-1-1

Fig. 6-1-2

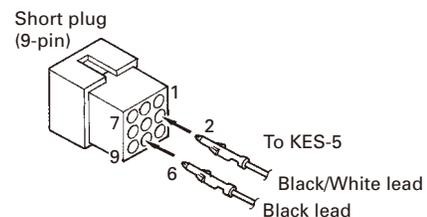

Fig. 6-1-3

INSTALLATION

6-2. Connecting the KES-5 external speaker to the KRK-5/6DH remote kit

- When taking the AF output from the 12-pin accessory connector on the rear of the control head

• Modification of plug (12-pin)

1. Remove the square plug from the accessory connector (12-pin) on the rear of the control head.
2. Cut off the end of the rubber cap, insert the KES-5 speaker cable into the cap, and insert it into pins 10 and 11 of the square plug.
3. Connect the square plug and rubber cap to the accessory connector (12-pin) on the rear of the control head, then clamp the bottom of the rubber cap with the supplied tie wrap.

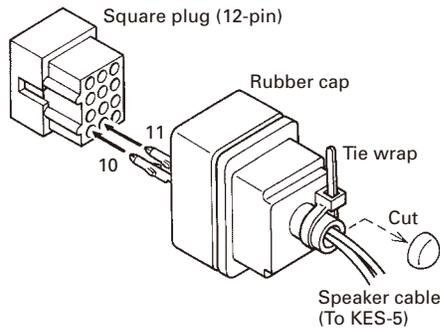

Fig. 6-2-1

- If the KCH-14 is used

If the KES-5 is connected to the 12-pin accessory connector, remove the internal speaker wire.

If the internal speaker is used, remove the wire connected to pins 10 and 11 of the 12-pin accessory connector.

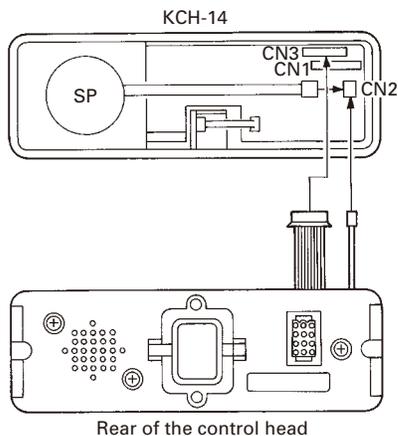

Fig. 6-2-2

6-3. Modification to increase the audio output of the control head

The speaker output can be increased to 13W by moving jumper resistor (0 ohm) R74 to SR73 on the KCH-14 display unit (X54-349 A/3). In this case, the KCH-14 internal speaker cannot be used because the maximum input (3W) of the internal speaker is exceeded. Therefore, use the KES-5.

Note:

Even if the KRK-6DH is modified in this way, the audio output of head 2 cannot be increased.

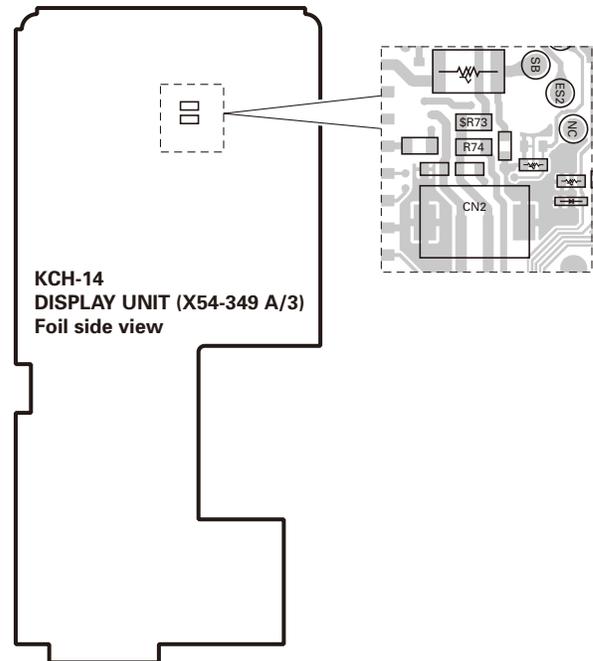

Fig. 6-3

6-4. Use as public address speaker

1. Remove the short plug from the 9-pin accessory connector on the rear of the transceiver. (Remove the jumper lead as described in Section 6-1 on page 17.)
2. Insert the KES-5 speaker leads into pins 7 and 8 of the short plug.
3. If you remove jumper shorting pins 3 and 6, the 20W PA (public address) voice signal is output from pins 7 and 8. (Only when the PA or SP switch is on.)
4. If you use the transceiver shorted with pins 3 and 6, the internal speaker is available (when the KCH-14 is used). The KCH-15 does not contain a speaker.

Note:

Relationship between accessory connector (9-pin) connection and speaker output.

When pins 3 and 6 are shorted; The 3W internal speaker is used (KCH-14 only).

When pins 3 and 6 are opened and is output from pins 7 and 8; The 20W external speaker is used.

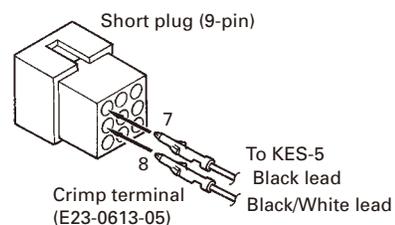

Fig. 6-4

INSTALLATION

7. Horn Alert Function

The HR1 and HR2 pins of the accessory connector (9-pin) on the rear of the transceiver are connected to the relay (K500) and the maximum current is 1A.

1. Remove the upper case of the transceiver.
2. To make the HR2 pin, remove the jumper resistor (0 ohm) R634 on the control unit (X53-440) as shown in Table 1.
3. Reassemble the PC board and the upper case.

	Default	Modification
R634	Present	Absent
State		

Table 1

8. Handheld control head

(KCH-16: Option)

The KCH-16 Handheld control head is used to remotely operate the transceiver.

See the service manual No. B51-8834-00

TK-5810(BG)/5810H(BG)

DISASSEMBLY FOR REPAIR

Disassembly Procedure (TK-5810(BG))

■ Removing the upper/lower case and shielding cover

1. Remove the 9 screws ① and 9 spacers ②.
2. Remove the upper case ③ and lower case ④.
3. Remove the upper packing ⑤ and lower packing ⑥.
4. Remove the shielding cover ⑦.

■ Removing the TX-RX unit (X57-727)

1. Remove the 7 screws ⑧ holding the PLL shielding cover.
2. Remove the PLL shielding cover ⑨.
3. Remove the coaxial cables from the two connectors (CN151 and CN200) of the TX-RX unit ⑩.
4. Remove the flat cables from the two connectors (CN600 and CN601) of the TX-RX unit ⑪.

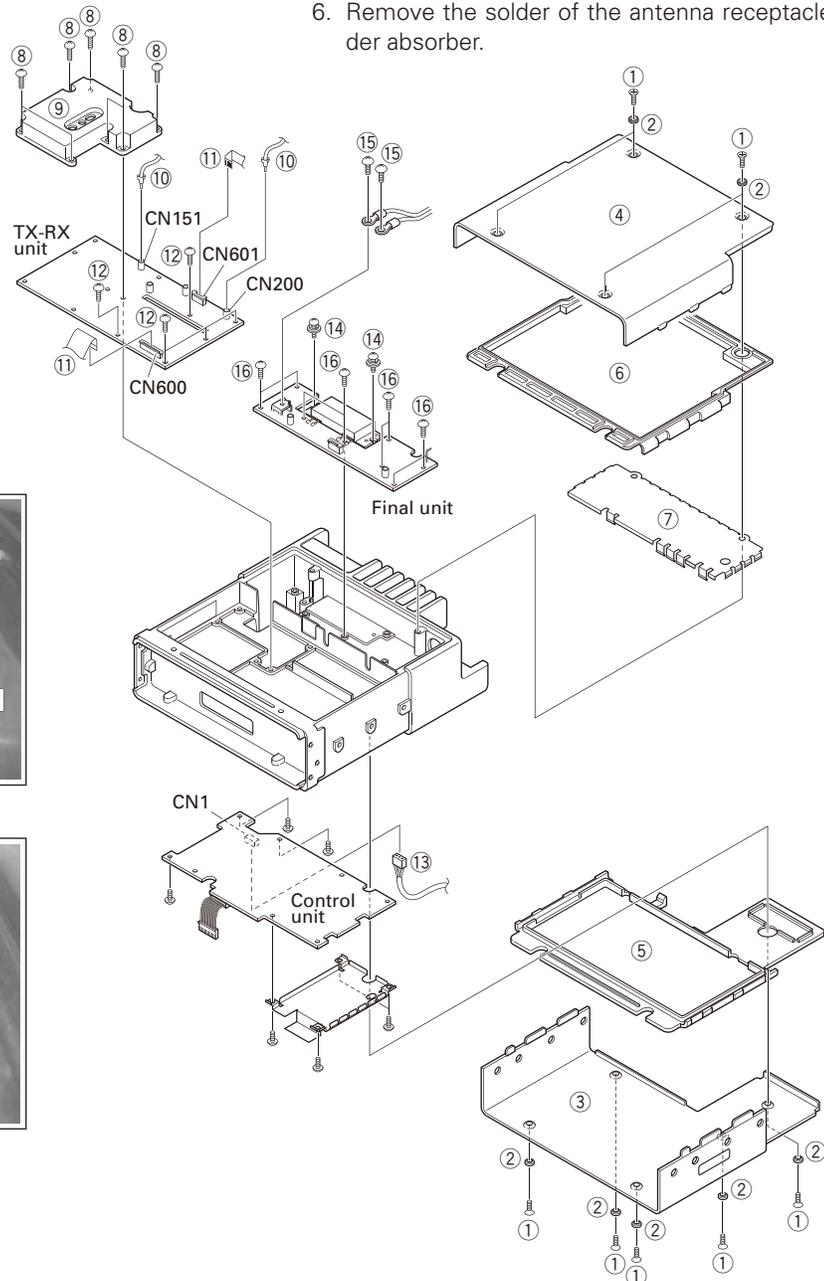

Note:

When re-installing the flat cable to the connector on the CN600 side, do not align the cable as shown in the figure 1, as there is a possibility of producing an effect on the sensitivity of P25.

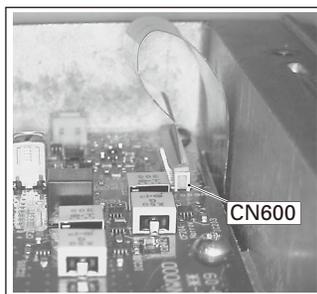

5. Remove the 5 screws ⑫.

■ Removing the Final unit (X45-379)

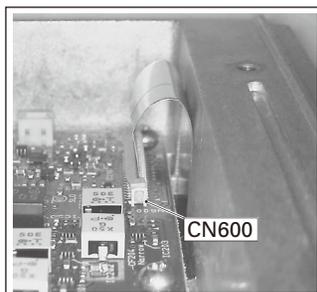

1. Remove the cables from the connector (CN1) of the control unit ⑬.
2. Remove the 2 screws ⑭ holding the power module.
3. Remove the solder of the power module with a solder absorber.
4. Remove the 2 screws ⑮ holding the + (positive) terminal and - (negative) terminal of the power supply cable.
5. Remove the 8 screws ⑯ holding the final unit.
6. Remove the solder of the antenna receptacle with a solder absorber.

Right

DISASSEMBLY FOR REPAIR

Disassembly Procedure (TK-5810H(BG))

■ Removing the upper/lower case and shielding cover

1. Remove the 12 screws ① and 12 spacers ②.
2. Remove the upper case ③ and lower case ④.
3. Remove the upper packing ⑤ and lower packing ⑥.
4. Remove the shielding cover ⑦.

■ Removing the TX-RX unit (X57-727)

1. Remove the 7 screws ⑧ holding the PLL shielding cover.
2. Remove the PLL shielding cover ⑨.
3. Remove the coaxial cables from the two connectors (CN151 and CN200) of the TX-RX unit ⑩.
4. Remove the flat cables from the two connectors (CN600 and CN601) of the TX-RX unit ⑪.

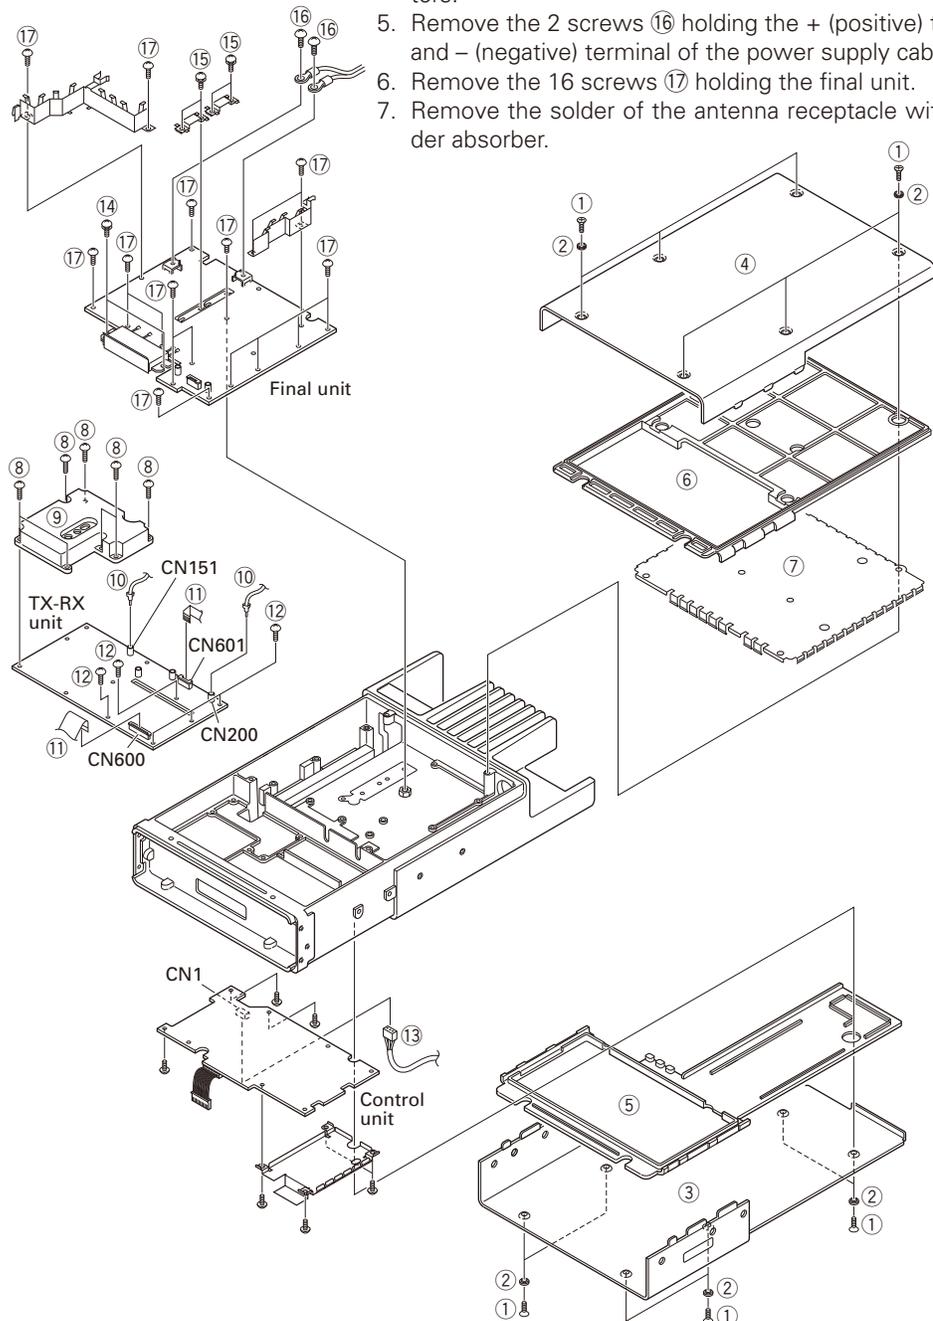

Note:

When re-installing the flat cable to the connector on the CN600 side, do not align the cable as shown in the figure 1, as there is a possibility of producing an effect on the sensitivity of P25.

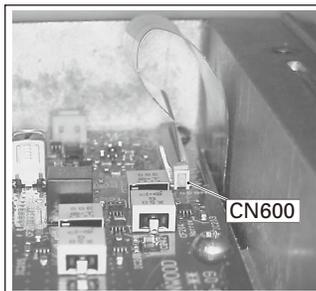

5. Remove the 5 screws ⑫.

■ Removing the Final unit (X45-380)

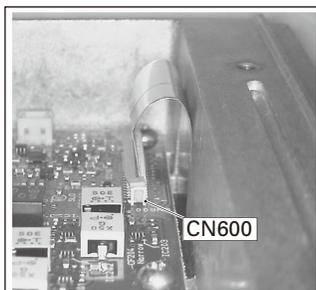

1. Remove the cables from the connector (CN1) of the control unit ⑬.
2. Remove the 2 screws ⑭ holding the power module.
3. Remove the solder of the power module with a solder absorber.
4. Remove the 4 screws ⑮ holding the two final transistors.
5. Remove the 2 screws ⑯ holding the + (positive) terminal and - (negative) terminal of the power supply cable.
6. Remove the 16 screws ⑰ holding the final unit.
7. Remove the solder of the antenna receptacle with a solder absorber.

Wrong

Right

TK-5810(BG)/5810H(BG)

DISASSEMBLY FOR REPAIR

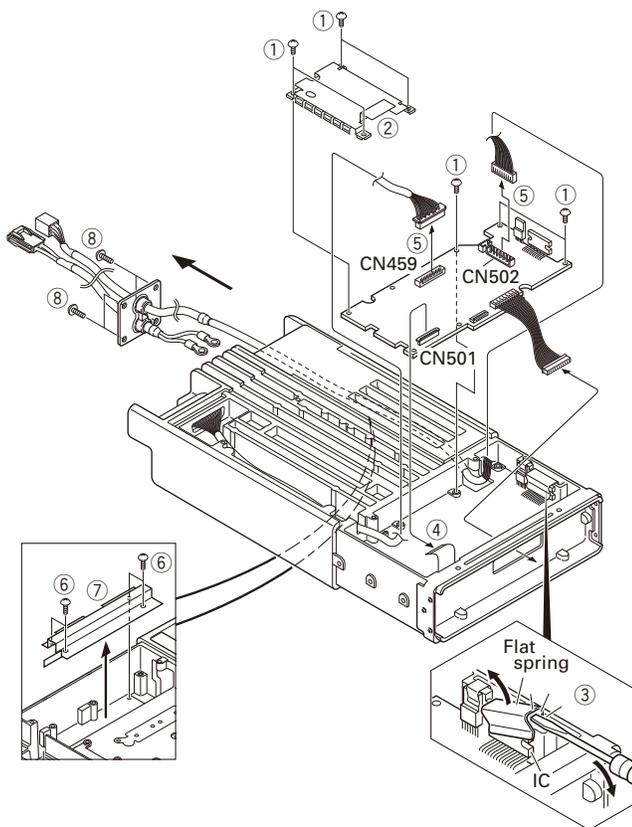

Disassembly Procedure (TK-5810(BG)/5810H(BG))

■ Removing the Control unit (X53-440)

1. Remove the 7 screws ①.
2. Remove the shielding plate ②.
3. With a flat-head screwdriver, remove the 2 flat springs holding the ICs (IC5 and IC522) ③.
4. Remove the flat cable from the connector (CN501) ④.
5. Remove the cables from the two connectors (CN459 and CN502) ⑤.

■ Removing the accessory cable and power supply cable on the rear of the transceiver

1. Confirm the following contents.
 - The screws holding the + (positive) terminal and – (negative) terminal of the power supply cable is removed.
 - The cable from the connector (CN502) of the Control unit is removed.
2. Remove the 4 screws ⑥ holding the shielding plate, and remove the shielding plate ⑦ from the chassis (TK-5810H(BG) only).
3. Remove the 4 screws ⑧ on the rear of the transceiver.
4. Pull out the power supply cable and accessory cable.

Precautions for Reassembly

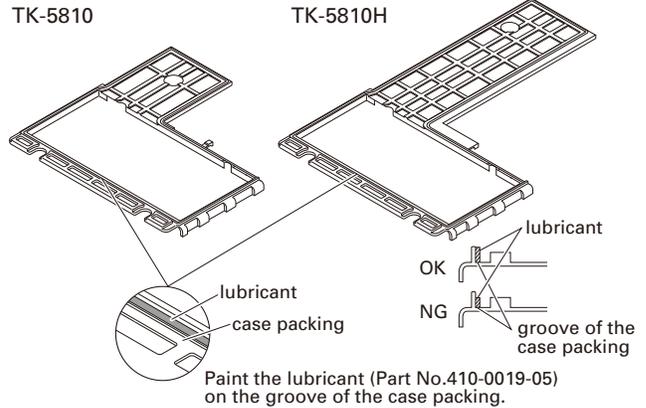

■ Painting the lubricant (Part No.: 410-0019-05) on the groove of the case packing

Paint the lubricant to the position as shown in figure after replacing or assembling the case packing.

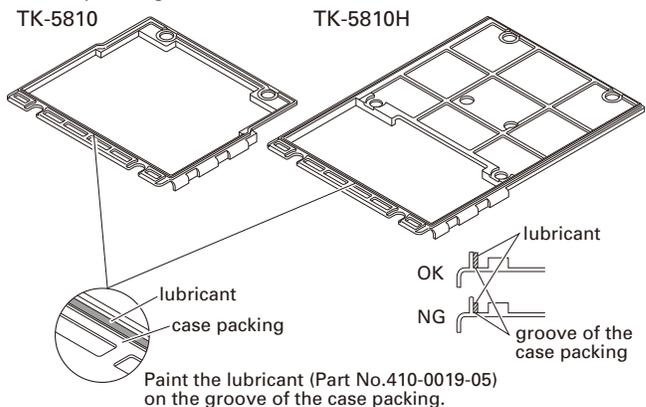

Note:

To assure waterproofing, paint the lubricant on the groove of the case packing.

- Case packing (Upper)

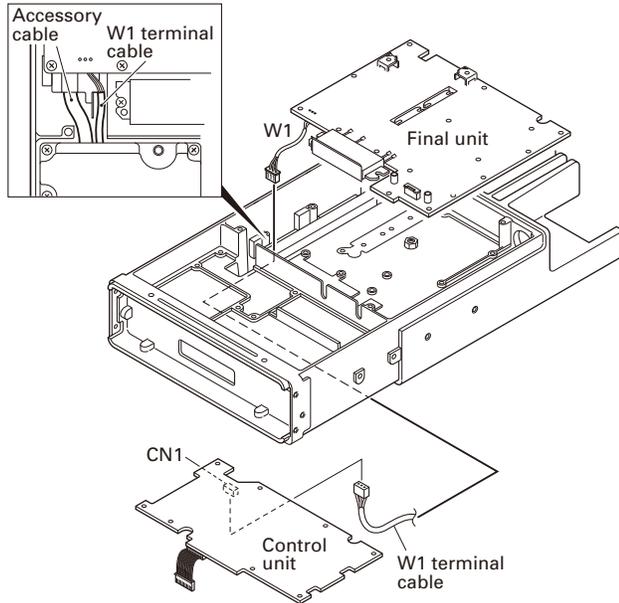

- Case packing (Lower)

DISASSEMBLY FOR REPAIR

Align the cable connecting the W2 terminal: TK-5810H(BG) only

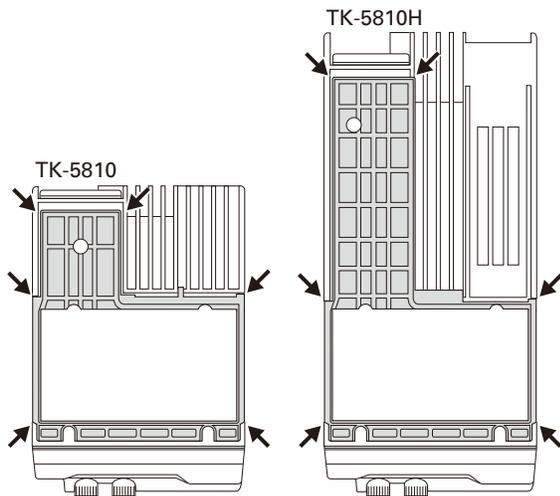

When you assemble the final unit, align the cable connecting the W1 terminal as shown in figure, then insert it into the connector (CN1) of the control unit.

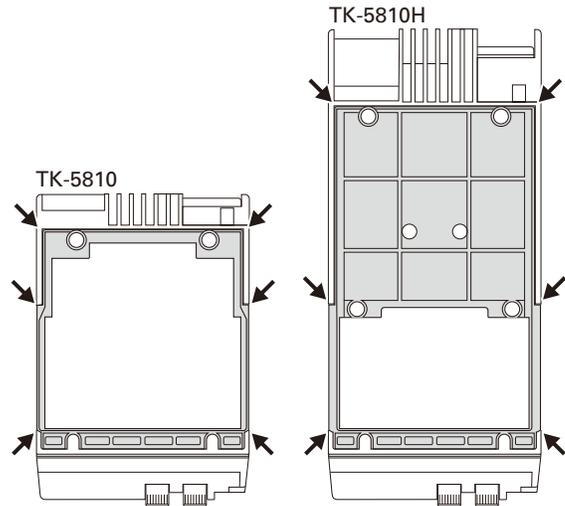

Procedures after installing the case packing to the chassis

After installing the case packing to the chassis, confirm that all corners of the upper/lower packing are securely fitted to the chassis. Place arrows shown in the figure below.

Case packing (Upper)

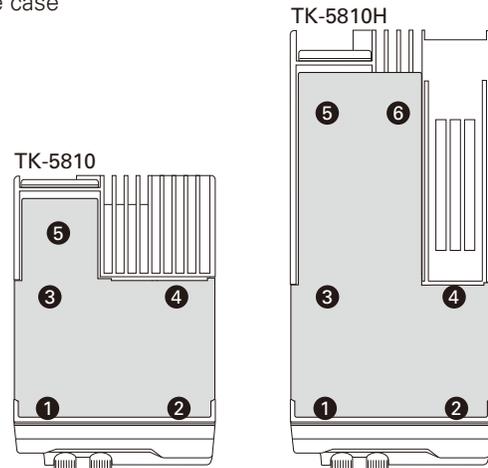

Case packing (Lower)

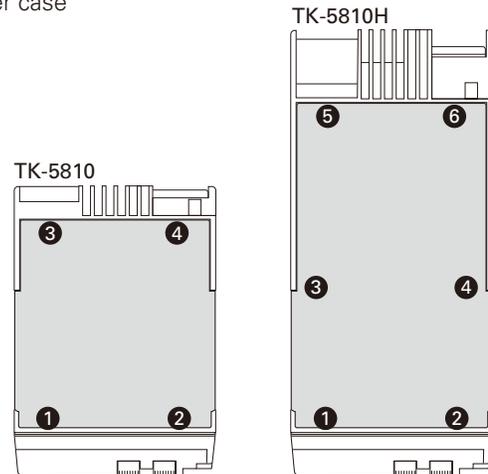

Sequence of tightening the screws for the upper/lower case to the chassis

Install the upper/lower case to the chassis and tighten the screws in the order shown in the figure below.

Case case

Lower case

CIRCUIT DESCRIPTION

1. Overview

This transceiver is a UHF/FM/P25 transceiver designed to operate in the frequency range of 450 to 520MHz (K) or 400 to 470MHz (K2).

The unit consists of receiver, transmitter, phase-locked loop (PLL) frequency synthesizer, base band parts, power supply, and control circuits.

2. Frequency Configuration

The receiver is a double-conversion superheterodyne using first intermediate frequency (IF) of 49.95MHz and second IF of 450kHz. Incoming signals from the antenna are mixed with the local signal from the PLL circuit to produce the first IF of 49.95MHz.

This is then mixed with the 50.4MHz second local oscillator output to produce the 450kHz second IF. This signal is detected to give the demodulated signal in the DSP.

The transmit signal frequency is generated by the PLL VCO, and modulated by the signal from the DSP. It is then amplified and fed to the antenna.

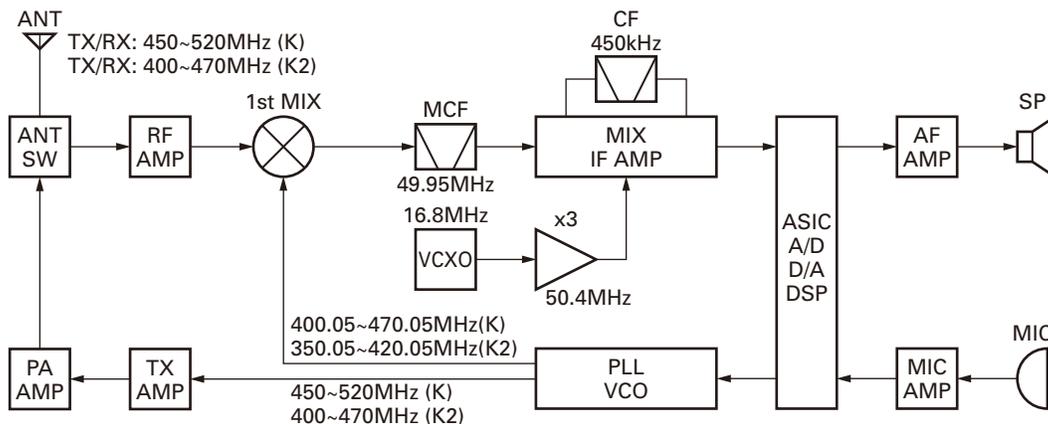

Fig. 1 Frequency configuration

3. Receiver System

3-1. Front-end RF Amplifier

The receive signal from the RX terminal (CN200) of the TX-RX unit (X57-727) is amplified by a transistor (Q200) and passes through the band-pass filter (L207, L208, L209 and L210) to remove unwanted signal.

The signal passing through the band-pass filter goes into the 1st mixer.

These band-pass filters are tuned to a desired frequency by variable capacitance diode (D204, D205, D206 and D207).

A tuning voltage corresponding to the desired signal is applied to each variable capacitance diode to tune to the receive frequency.

3-2. 1st Local

The 1st mixer uses double balanced mixer (IC200).

The receive signal passing through the band-pass filter (L207, L208, L209 and L210) and the 1st local signal generated by the VCO, are mixed by the 1st mixer (IC200) to produce a 1st IF signal (49.95MHz) (Lower heterodyne).

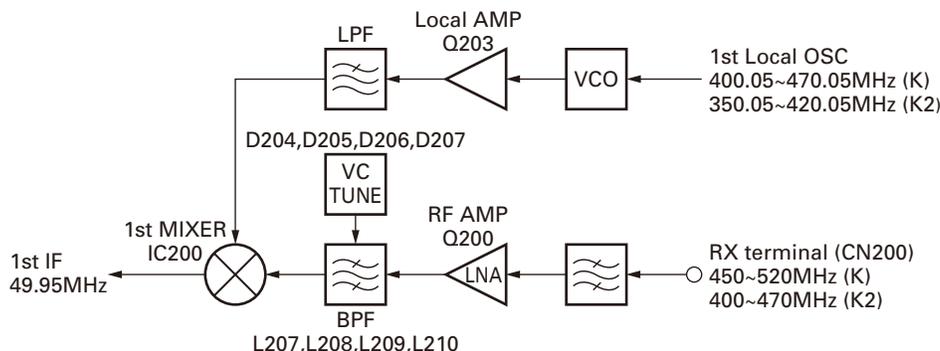

Fig. 2 Front-end RF amplifier and 1st local

CIRCUIT DESCRIPTION

3-3. 1st IF

The 1st IF signal passes through the MCF (Monolithic Crystal Filter) to remove unwanted signal.

The MCF has two paths (Wide band: XF201, Narrow band: XF200), and these are controlled with the IF filter switch (D208, D209, D210, D211, D212, D213, D214 and D215).

The signal passes through the MCF (XF201) when the Wide band (D209, D211, D213 and D215 are ON) is selected. The signal passes through the MCF (XF200) when the Narrow band (D208, D210, D212 and D214 are ON) is selected.

The 1st IF signal passing through these MCFs is amplified by the IF amplifier (Q205) and goes into the FM IC (IC209).

3-4. 2nd Local

The 1st IF signal (49.95MHz) amplified by the IF amplifier (Q205) and the 2nd local signal (50.4MHz) generated by tripling the reference oscillator frequency (16.8MHz) of the VCXO (X200) by Q207, are mixed in the FM IC (IC209) to produce a 2nd IF signal (450kHz) (Upper heterodyne).

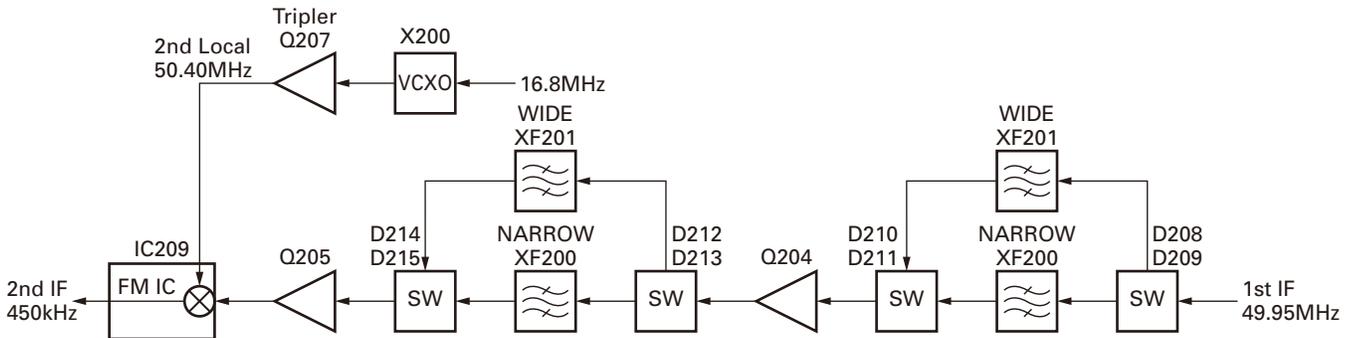

Fig. 3 1st IF and 2nd local

3-5. 2nd IF

The 2nd IF signal passes through the ceramic filter to remove unwanted signal.

The ceramic filter has two paths (Wide band: CF201 and CF202, Narrow/P25 band: CF200 and CF204), and these are controlled with the multiplexers (IC201, IC202, IC203, IC205, IC206 and IC207).

The control line is W/N1, W/N2 and VN.

The signal passes through the ceramic filters (CF201 and CF202) when the Wide band (W/N1: high level, W/N2: high level, VN: high level) is selected. The signal passes through the ceramic filters (CF200 and CF204) when the Narrow/P25 band (W/N1: low level, W/N2: low level, VN: high level) is selected.

After that, the signal is fed into ASIC (IC708) through ceramic filter (CF100), and then, the signal is demodulated in ASIC and the AF signal is dealing with DSP (IC701).

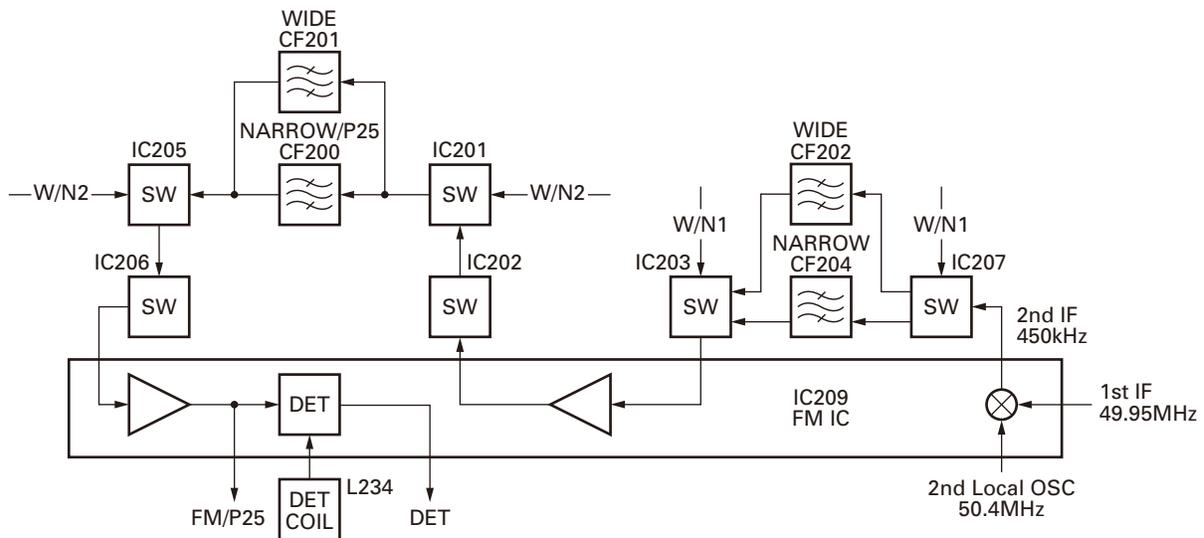

Fig. 4 2nd IF

CIRCUIT DESCRIPTION

3-6. Audio Amplifier Circuit

Audio processing (high-pass filter, low-pass filter, de-emphasized and so on) at FM mode and decoding at P25 mode are processed by DSP. Audio signal from IC708, IC701 goes through Low-pass filter (IC503). The signal then goes through mute switch (IC506), amplifier (IC510), and switch (IC515), and electronic volume control (IC517), and pre-amp (IC516), and audio mute switch (Q506), and audio route switch (IC518), and audio power amp (IC522).

While busy, /SPK_MUTE becomes High, turn Mute switch (Q506) off, and signal is fed to AF Power Amp (IC522). While Non-busy, /SPK_MUTE is become Low, turn Mute switch (Q506) on, then there is not AF output.

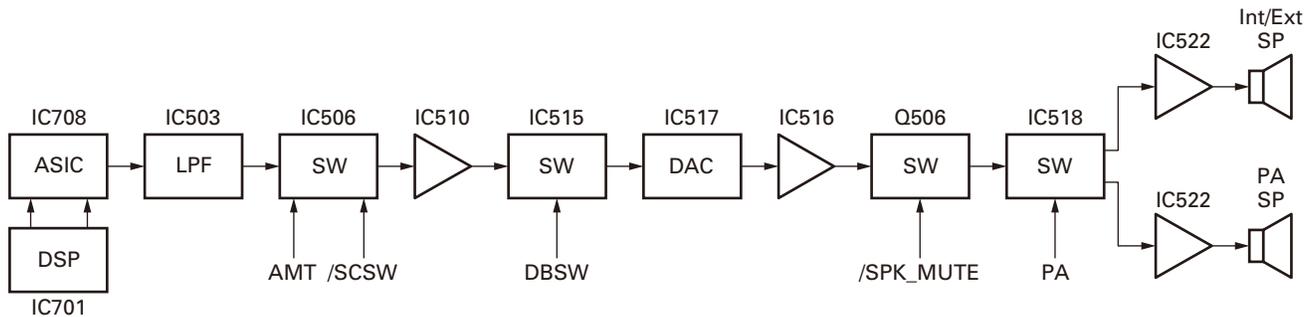

Fig. 5 Audio Amplifier circuit

3-7. Squelch Circuit

It amplifies the demodulated noise signal from FM IC (IC209) after filtering through BPF circuit. Then, the amplified signal is converted to DC signal by the detection circuit. The converted signal is fed to the ASIC (IC708).

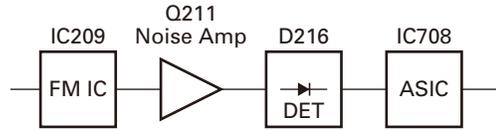

Fig. 6 Squelch circuit

4. Transmitter System

4-1. Audio Band Circuit

The signal from the microphone goes through the mute switch (Q503), the MIC-Mute signal (MM) becomes Low, and then mute switch (Q503) is turned off. The signal

from microphone goes through summing-Amp (IC512) and MIC-AGC (IC512, Q501, Q502, D500 and D501), and goes through audio route switch (IC509), and amplified by MIC-Amp IC505. LPF IC501 works as anti-aliasing filter.

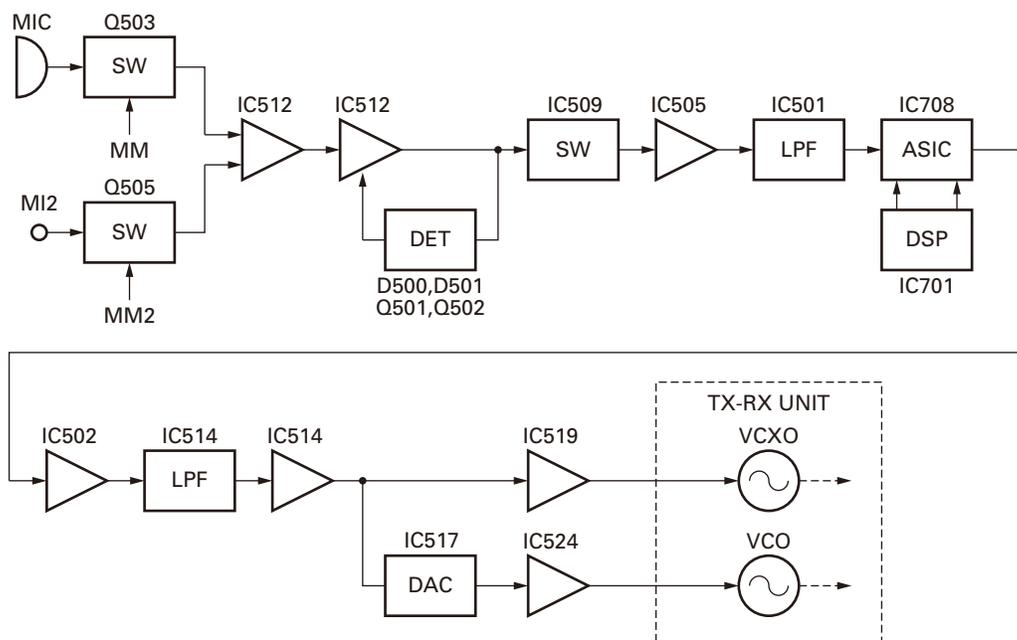

Fig. 7 Audio band and Base band circuit

CIRCUIT DESCRIPTION

4-2. Base Band Circuit

The audio signal output from the base band circuit is converted by ASIC (IC708) to digital data of a sampling frequency of 48 kHz. This digital data is sent to the DSP (IC701) and voice signals of 300Hz or lower and frequencies of 3kHz or higher are cut off and an audio range 300Hz to 3kHz is extracted. The audio signal is then pre-emphasized in FM mode and synthesized with the signals, such as QT and DQT, as required, and is then output from the ASIC (IC708). In P25 mode, the audio signal is converted to the 4-Level FSK base band signal and output from the ASIC (IC708). The DTMF, 2tone and MSK base band signals are also generated by the DSP (IC701) and output by the ASIC (IC708).

LPF (IC514) works as smoothing filter. The DAC (IC517) assigns the base band signal to the VCO and VCXO (X400). At this time, the level output according to the transmit carrier is fine-adjusted according to each modulation method.

4-3. Drive Amplifier Circuit (From T/R switch to Power module)

The transmit signal passing through the T/R switch (D420) is amplified by the two drive amplifiers (Q150 and Q151). The transmit signal from the drive amplifier (Q151) passes through a 3dB attenuator and is fed to the power module.

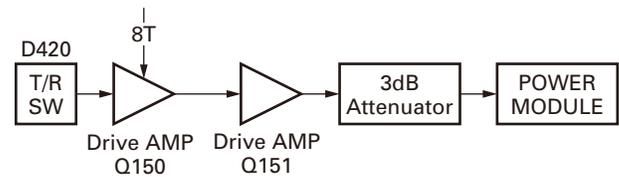

Fig. 8 Drive amplifier circuit

4-4. Final Amplifier Circuit (From Power module to Antenna output): TK-5810(BG)

The transmit signal from the TX terminal (CN1) of the final unit (X45-379) is amplified by the power module (IC2).

The signal amplified by the power module passes through the CM coupler, antenna switch (D1, D12, D3 and D11) and low-pass filter, then it is fed to the antenna.

CM coupler is a line for detecting forward RF power and reflected RF power.

Forward RF power is detected by D5, and is converted into DC voltage. The converted DC voltage is fed to the APC comparator (IC1), and is compared with the PC voltage, then is output from the OUT-B terminal (pin 7) of IC1 as an APC voltage. The APC voltage controls the gate voltage of the power module (IC2), and keeps transmission output stable.

If an abnormal antenna load is connected, reflected RF power is detected by D6, and output voltage (DC voltage) is fed to the APC comparator (IC1). The transmission output is reduced more as this DC voltage rises.

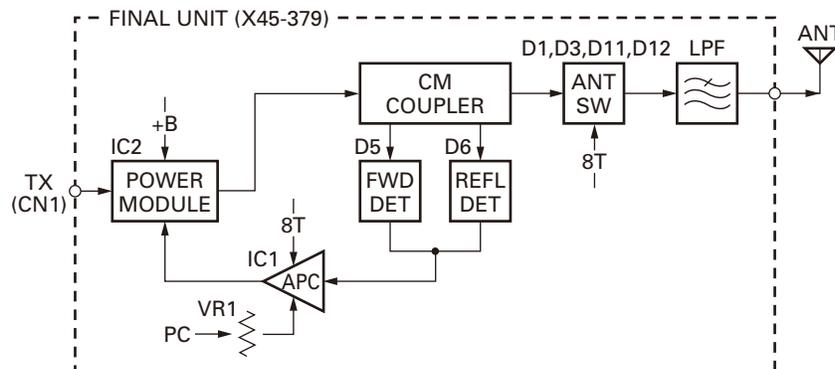

Fig. 9 Final amplifier circuit: TK-5810(BG)

4-5. Final Amplifier Circuit (From Power module to Antenna output): TK-5810H(BG)

The transmit signal from the TX terminal (CN1) of the final unit (X45-380) is amplified by the power module (IC1).

The signal amplified by the power module is divided into two signal, and further is amplified by the final amplifier (Q1 and Q2). The each signal from Q1 and Q2 is combined.

The combined signal passes through the antenna switch (D5, D6, D7, D8, D15 and D16), CM coupler and low-pass filter, then it is fed to the antenna.

CM coupler is a line for detecting forward wave and reflected wave.

Forward wave is detected by D2, and is converted into DC voltage. The converted DC voltage is fed to the APC comparator (IC2), and is compared with the PC voltage, then is output from the OUT-B terminal (pin 7) of IC2 as an APC voltage. The APC voltage controls the gate voltage of the power module (IC1) and final amplifier (Q1 and Q2), and keeps transmission output stable.

If an abnormal antenna load is connected, reflected wave is detected by D3, and output voltage (DC voltage) is fed to the APC comparator (IC2). The transmission output is reduced more as this DC voltage rises.

CIRCUIT DESCRIPTION

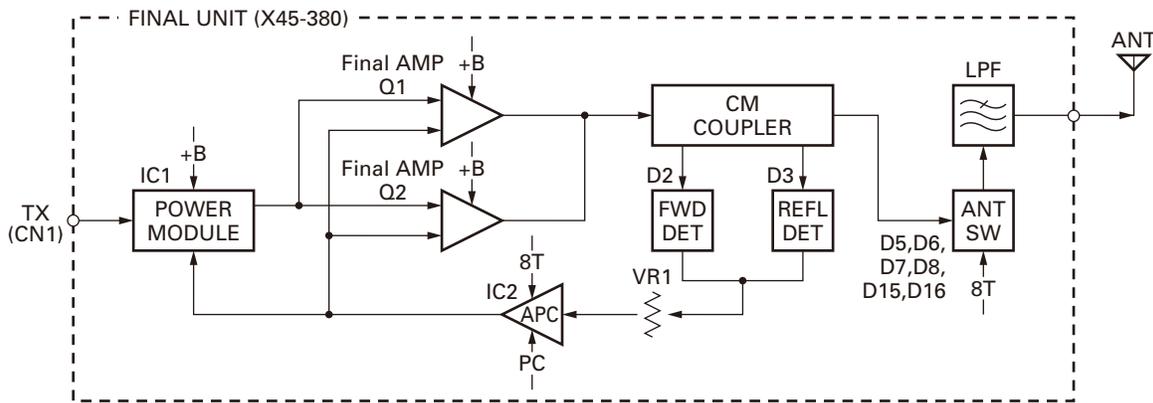

Fig. 10 Final amplifier circuit: TK-5810H(BG)

4-6. Automatic Power Control Circuit

The automatic power control (APC) circuit stabilizes the transmitter output power at a predetermined level and consists of forward/reflected power detector circuits.

The forward/reflected power detector circuits detect forward RF power and reflected RF power to DC voltage, and consists of a CM coupling type detection circuit formed by a CM coupler.

The voltage comparator compares the voltage obtained by the above detected voltage with the PC voltage.

An APC voltage proportional to the difference between the sensed voltage and the reference voltage appears at the output of the comparator. This output voltage controls the gate voltage to the final amplifier.

4-7. Temperature Protection Circuit: TK-5810(BG)

To prevent thermal destruction of the power module (IC2), this circuit reduces APC voltage when temperature of the power module (IC2) rises.

The ASIC (IC708) detects temperature with a thermistor (TH1 and TH4) and controls reference voltage to the APC circuit.

4-8. Temperature Protection Circuit: TK-5810H(BG)

To prevent thermal destruction of the power module (IC1) and final amplifier (Q1 and Q2), this circuit reduces APC voltage when temperature of the power module (IC1) and final amplifier (Q1 and Q2) rises.

The ASIC (IC708) detects temperature with the thermistor (TH1 and TH3) and controls reference voltage to the APC circuit.

5. PLL Frequency Synthesizer

The PLL Frequency Synthesizer consists of the following components:

- VCXO (X400)
- VCO (Q413, Q414 and Q415)
- Potentiometer IC (IC401)
- PLL IC (IC400)
- Local switch (D419 and D420)

This PLL system is composed of a PLL IC (IC400), a crystal oscillator (X400), VCO and a potentiometer IC (IC401).

VCO (Voltage Controlled Oscillator) is provided with 2 input terminals which are controlled by the potentiometer IC and the PLL IC. The potentiometer IC brings the oscillation frequency of VCO close to the target frequency, after the PLL locks it up.

The operation frequency of PLL is from 450 to 520MHz (K)/ 400 to 470MHz (K2) in TX mode and from 400.05 to 470.05MHz (K)/ 350.05 to 420.05MHz (K2) in RX mode. The frequency steps of the PLL is 2.5, 5, 10, 12.5, 20 or 25kHz. The comparative frequency of PLL which is 5, 10, 12.5, 20 or 25 are made by a programmable reference divider in PLL IC (IC400) from the 16.8MHz reference signal of the crystal oscillator (X400). Similarly, the VCO output signal is divided into comparative frequency by the programmable N divider in the PLL IC (IC400), and is compared with the divided reference signal in its phase detector.

The output signal of the phase detector is sent to one of the input terminals of the VCO.

5-1. VCXO (X400)

VCXO (X400) generates a reference frequency of 16.8 MHz for the PLL frequency synthesizer. This reference frequency is applied to pin 10 of the PLL IC (IC400).

The VCXO oscillation frequency is fine-adjusted by controlling the voltage applied to pin 1 of the VCXO with the ASIC (IC708). It is also controlled with pin 1 of the VCXO if the output from VCXO is modulated.

5-2. VCO

There is two RX VCOs (RX VCO1, RX VCO2) and a TX VCO.

The RX VCO1 (Q415) and RX VCO2 (Q414) generate a 1st local receive signal. The RX VCO1 oscillation frequency is 400.05 to 435.045MHz (K), 350.05 to 385.045MHz (K2) and the RX VCO2 oscillation frequency is 435.05 to 475.05 MHz (K), 385.05 to 420.05MHz (K2).

The TX VCO (Q413) generates a transmit carrier. The TX VCO oscillation frequency is 450 to 520MHz (K), 400 to 470MHz (K2).

CIRCUIT DESCRIPTION

The VCO oscillation frequency is determined by two systems of operation switching terminals "STR" and "VCO1/2" and two systems of voltage control terminals "C/V" and "ASSIST".

The operation switching terminals, "STR" and "VCO1/2", are controlled by the control lines (STR, VCO1/2) output from the ASIC (IC708). When the STR logic is high and the VCO1/2 logic is high, the RX VCO1 output a 1st local receive signal. When the STR logic is high and the VCO1/2 logic is low, the RX VCO2 output a 1st local receive signal. When the STR logic is low, the TX VCO output a transmit carrier.

The voltage control terminals, "C/V" and "ASSIST", are controlled by the PLL IC (IC400) and potentiometer IC (IC401) and the output frequency changes continuously according to the applied voltage. For the modulation input terminal, "MOD", the output frequency changes according to the applied voltage. This is used to modulate the VCO output. "MOD" works only when "STR" is low.

The oscillation frequency is controlled by the voltage of the input terminals of the VCO, obtained from the potentiometer IC applying to varactor diodes (D416, D417, D421, D411, D412, D422, D405, D406, and D407), and from the phase detector applying to diodes (D413, D414, D408, D409, D402, and D403).

5-3. Potentiometer IC (IC401)

The potentiometer IC (IC401) is connected to the VCO voltage control terminal, "ASSIST", and quickly controls the VCO oscillation frequency. However, its accuracy is low and the VCO frequency cannot be matched accurately with the desired transmit carrier or the 1st local receive signal.

The potentiometer IC is controlled by the ASIC (IC708) through the 3-line "PCS", "DAT", "CLK" serial bus.

5-4. Lockup Accelerator

The lockup accelerator is a circuit composed of a potentiometer IC (IC401) and a DC amplifier (IC403) to compel the oscillation frequency of the VCO to be close to the target.

The potentiometer IC outputs the voltage which meets the target frequency, and the signal is connected to one of two input terminals of the VCO through the DC amplifier.

5-5. PLL IC (IC400)

PLL IC compares the differences in phases of the VCO oscillation frequency and the VCXO reference frequency, returns the difference to the VCO CV terminal and realizes the "Phase Locked Loop" for the return control. This allows the VCO oscillation frequency to accurately match (lock) the desired frequency.

When the frequency is controlled by the PLL, the frequency convergence time increases as the frequency difference increases when the set frequency is changed. To supplement this, the potentiometer IC is used before control by the PLL IC to bring the VCO oscillation frequency close to the desired frequency. As a result, the VCO CV voltage does not change and is always stable at approximately 2V.

The desired frequency is set for the PLL IC by the ASIC (IC708) through the 3-line "EP", "DAT", "CLK" serial bus. Whether the PLL IC is locked or not is monitored by the ASIC through the "UL" signal line. If the VCO is not the desired frequency (unlock), the "UL" logic is low.

5-6. Local Switch (D419, D420)

The connection destination of the signal output from the amplifier (Q418) is changed with the diode switch (D420) that is controlled by the transmission power supply, 8T, and the diode switch (D419) that is controlled by the receive power supply, 8R.

If the 8T logic is high, it is connected to a transmit-side pre-drive amplifier (Q150). If the 8R logic is high, it passes through the local amplifier (Q203) and then is connected to a receive-side mixer (IC200).

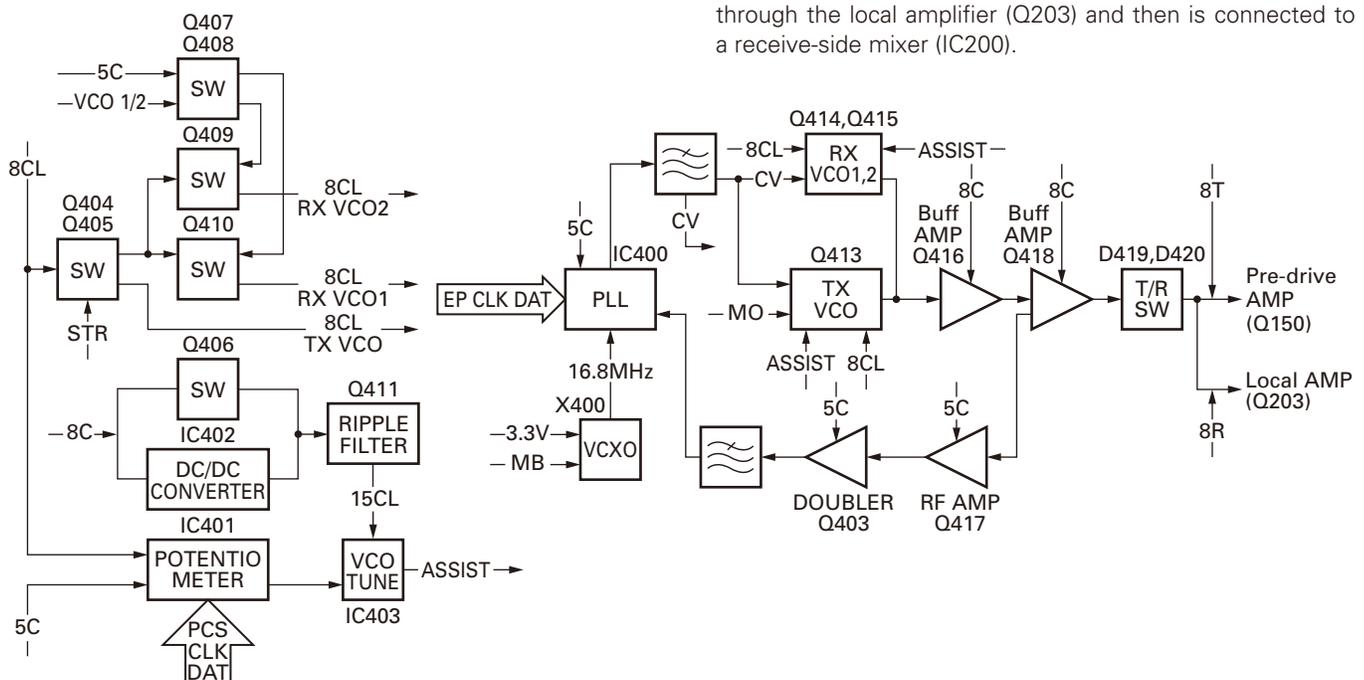

Fig. 11 PLL block diagram

CIRCUIT DESCRIPTION

6. Control Circuit

The control circuit consists of the ASIC (IC708) and its peripheral circuits. IC708 performs the following;

- 1) Switching between transmission and reception by PTT signal input.
- 2) Reading system, zone, frequency, and program data from the memory circuit.
- 3) Sending frequency program data to the PLL.
- 4) Controlling squelch on/off by the DC voltage from the squelch circuit.
- 5) Controlling the audio mute circuit by decode data input.

6-1. ASIC

The ASIC (IC708) is 32bit RISC processor, equipped with peripheral function and ADC/DAC.

This CPU operates at 18.432MHz clock and 3.3V/1.5V DC. It controls the flash memory, SRAM, DSP, the receive circuit, the transmitter circuit, the control circuit, and transfers data to or from an external device.

6-2. Memory Circuit

Memory circuit consists of the ASIC (IC708) and the SRAM (IC703), the flash memory (IC700). The flash memory has capacity of 64M-bit that contains the transceiver control program for the ASIC and stores the data. It also stores the data for transceiver channels and operating parameter that are written by the FPU. This program can be easily written from external devices. The SRAM has capacity of 2M-bit that contains work area and data area.

■ Flash memory

The flash memory stores the data that is written by the FPU (KPG-95DG), tuning data (Deviation, Squelch, etc.), and firmware program (User mode, Test mode, Tuning mode, etc.).

■ SRAM (static memory)

The SRAM has temporary data area and work area.

When the power supply is off, it is backed up by an internal secondary lithium battery. Therefore, the save data does not break.

■ Real-time clock

The clock function is based on real-time clock IC (IC704). When the power supply is off, it is backed up by an internal secondary lithium battery.

6-3. Display Unit (KCH-14/15/16)

The display unit is composed of the CPU and the LCD & Key backlight etc.

6-4. Temperature Detection Circuit

The temperature detection circuit detects the temperature using a temperature IC (IC702) and corrects the thermal characteristic change of the receiver and transmitter adjustments.

6-5. DSP

The DSP circuit consists of a DSP (IC701) and processes the base band signal. The DSP operates on an external clock of 18.432MHz (the same as the IC708), the I/O section operates at 3.3V and the core section operates at 1.5V. The DSP carries out the following processes:

- 4Level FSK processing
- Analog FM pre-emphasis/de-emphasis
- Vocoder processing between audio codec and modulation/demodulation
- CAI processing, such as error correction encoding
- QT/DQT encoding/decoding
- DTMF/2tone/MSK encoding/decoding
- Compressor/expander processing
- Transmit/receive audio filtering processing
- Microphone amplifier AGC processing
- Audio mute processing
- Modulation level processing

7. Power Supply Circuit

+B is connected to Final amplifier and DC/DC converter IC (IC4). IC4 regulates +B voltage to 5.0V (5M). 5M operates whenever +B is supplied. IC2 (33M), IC7 (33A) and IC8 (15M) are enabled while the 5M are operating. 33M, 33A and 15M provide the power to CPU, DSP, and Flash memory. At this time CPU starts working.

Voltage detector IC (IC1) watches +B voltage. If +B voltage is higher than 8.6V, IC1 (/BINT) outputs High. If the /BINT signal is high, Q3 (SB SW) is turned on by SBC signal from CPU (High: SB=ON, Low: SB=OFF). When the SB is turned on, IC5 (8C), IC3 (5C), IC9 (33GPS) start working. Q5 and Q10 and Q11 are controlled by SBC signal. If the SBC signal becomes High, Q5 (33M2) operates and Q10 (33AC) operates and Q11 (5MC SW) are turned on.

The CPU controls 8TC to High during transmission to supply power (8T) for transmission circuit. The CPU controls 8RC to High during reception to supply power (8R) for reception circuit. When the CPU detects the PSW (Power switch) signal, IGN (Ignition sense) signal or /BINT signal, it controls the SBC signal to Low, and turns the transceiver power (SB) off. When D1 and Q1 detect over-voltage condition, they turns Q3 (SB SW) off. But the CPU still works.

If +B is not provided to the transceiver, the power is provided to SRAM and RTC through the secondary battery connected with CN4.

CIRCUIT DESCRIPTION

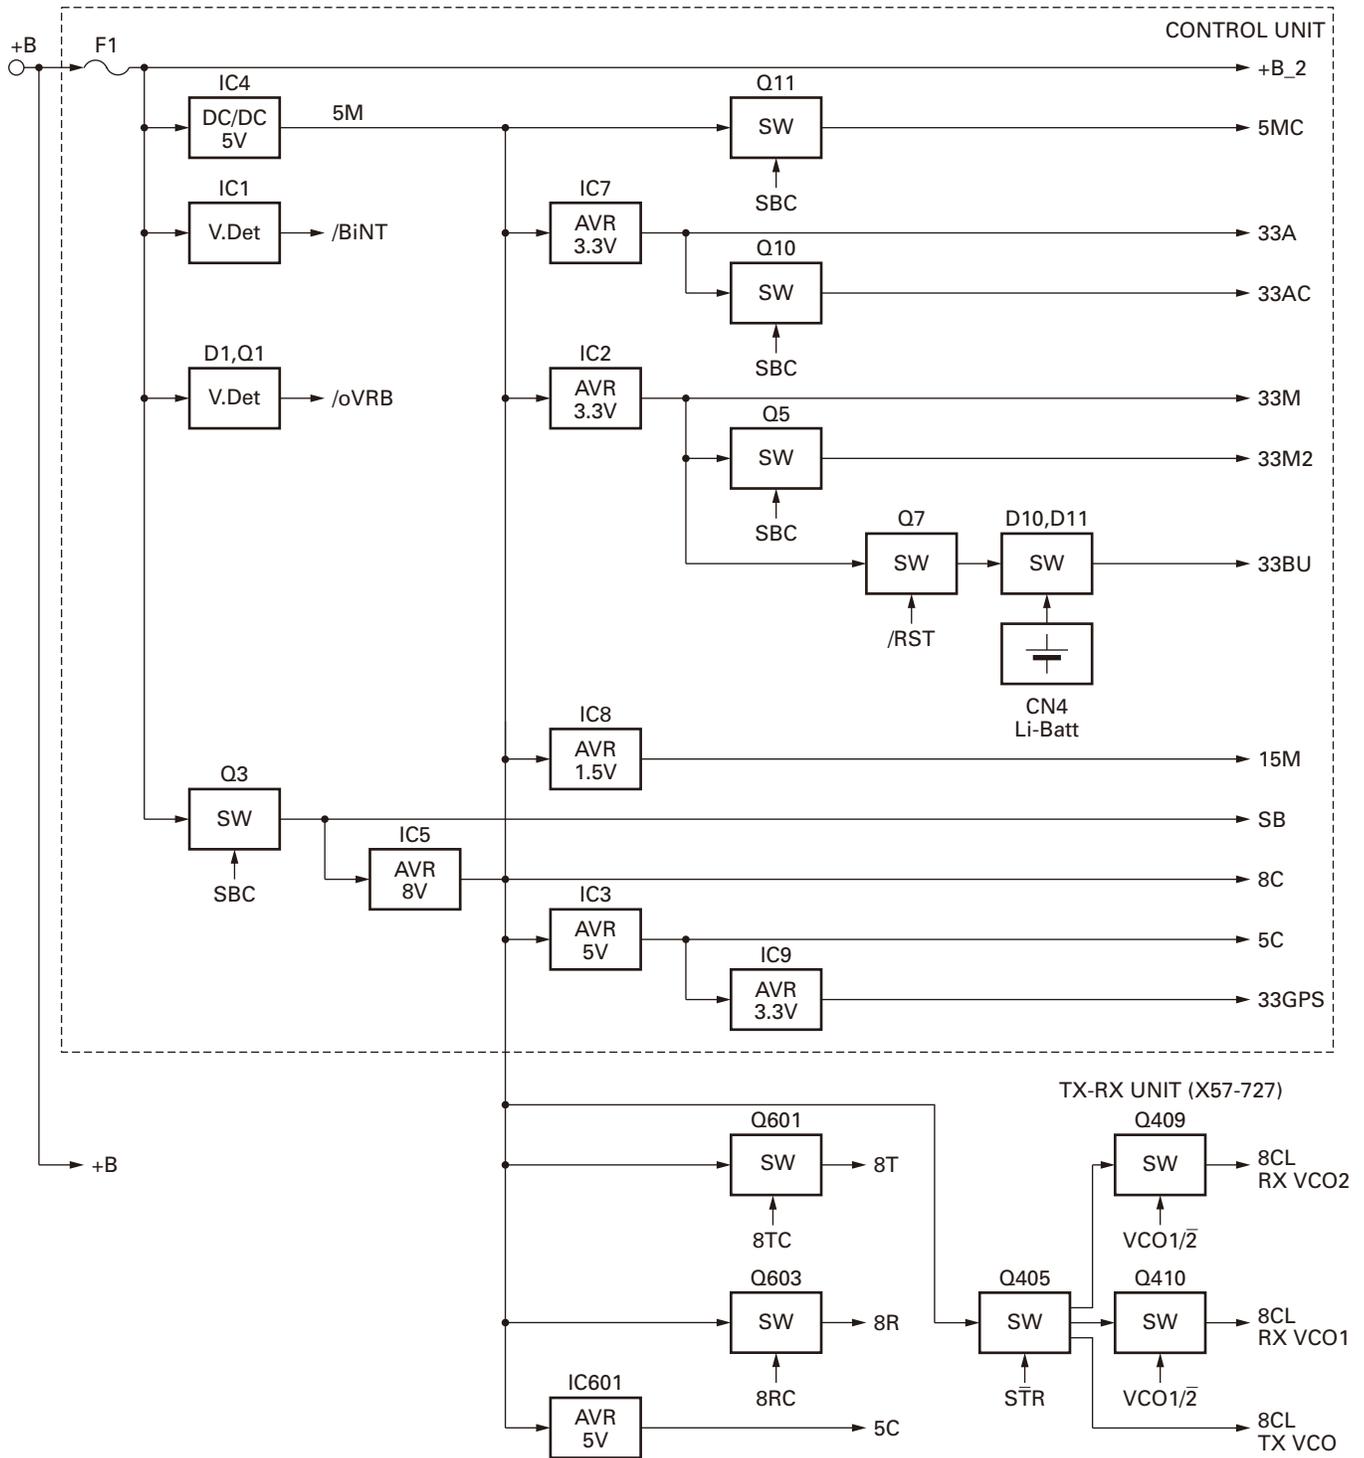

Fig. 12 Power supply circuit

TK-5810(BG)/5810H(BG)

COMPONENTS DESCRIPTION

Final unit (X45-3790-XX): TK-5810(BG)

Ref. No.	Part Name	Description
IC1	IC	APC comparator
IC2	IC	Power module
D1	Diode	ANT switch
D2	Zener diode	Protect of voltage
D3	Diode	ANT switch
D5	Diode	Forward wave rectification
D6	Diode	Reflected wave rectification
D10	Diode	Commbiner
D11,12	Diode	ANT switch
D13	Surge absorber	Surge absorption
D14	Diode	ANT switch

Final unit (X45-3800-XX): TK-5810H(BG)

Ref. No.	Part Name	Description
IC1	IC	TX drive AMP
IC2	IC	DC AMP and APC comparator
Q1,2	FET	Final AMP
D1	Zener diode	Protect of voltage
D2	Diode	Forward wave rectification
D3	Diode	Reflected wave rectification
D4	Diode	Commbiner
D5~8	Diode	ANT switch
D10	Surge absorber	Surge absorption
D13	Diode	Protect of reverse connection
D14	Surge absorber	Surge absorption
D15,16	Diode	ANT switch

Control unit (X53-4400-10)

Ref. No.	Part Name	Description
IC1	IC	Voltage detector (/BINT)
IC2	IC	Voltage regulator (33M)
IC3	IC	Voltage regulator (5C)
IC4	IC	DC/DC converter (5M)
IC5	IC	Voltage regulator (8C)
IC7	IC	Voltage regulator (33A)
IC8	IC	Voltage regulator (15M)
IC9	IC	Voltage regulator (33GPS)
IC100	IC	IF AMP (2nd IF)
IC101	IC	Buffer AMP (RSSI / ASQ)
IC102	IC	Buffer AMP (CV)

Ref. No.	Part Name	Description
IC103	IC	Buffer AMP (FTEMP1/FTEMP2)
IC200	IC	Data multiplexer
IC201	IC	Data multiplexer
IC202~206	IC	3.3V to 5V level converter
IC207	IC	5V to 3.3V level converter
IC208	IC	3.3V-5V level shifter
IC400	IC	I/O expander
IC401	IC	RS-232C driver
IC501	IC	DC AMP (Reference voltage) / Audio AMP (MIC)
IC502	IC	Buffer AMP (Data input) / DC AMP (Modulation line)
IC503	IC	Low-pass filter (RX audio) / Buffer AMP (Scrambler RX audio)
IC505	IC	Audio AMP (Scrambler TX audio) / Summing AMP (TX audio)
IC506	IC	Audio switch (Scrambler RX audio)
IC507	IC	Audio AMP (Scrambler TX audio) / DC AMP (Reference voltage)
IC508	IC	Audio switch (Side tone / VGS audio)
IC509	IC	Audio switch (Scrambler TX audio)
IC510	IC	Summing AMP (RX audio) / Audio AMP (VGS recording audio)
IC511	IC	Audio switch (VGS recording audio)
IC512	IC	Audio AMP (MIC AGC) / Summing AMP (MIC)
IC513	IC	Audio switch (TX audio monitor)
IC514	IC	Low-pass filter (Modulation signal) / Summing AMP (Data input)
IC515	IC	Audio switch (Optional audio line)
IC516	IC	Audio AMP (RX audio)
IC517	IC	8ch D/A converter
IC518	IC	Audio switch (Audio AMP output)
IC519	IC	DC AMP (Power control voltage)
IC520	IC	Audio AMP (Data output) / Audio AMP (AF output)
IC521	IC	DC AMP (RX front-end tuning voltage)
IC522	IC	Audio power AMP
IC523	IC	DC AMP (2nd Lo TCXO tuning voltage)
IC524	IC	Audio AMP (Modulation for VCO)
IC525	IC	DC AMP (Reference voltage)

COMPONENTS DESCRIPTION

Ref. No.	Part Name	Description
IC700	IC	Flash memory
IC701	IC	Digital signal processor
IC702	IC	Temperature sensor
IC703	IC	Static memory
IC704	IC	Real-time clock
IC705	IC	Voltage detector (System reset)
IC706	IC	Buffer AMP (Logic)
IC707	IC	Clock buffer AMP
IC708	IC	ASIC
Q1	Transistor	Over voltage control switch
Q2	Transistor	DC switch (SB)
Q3	FET	DC switch (SB)
Q4	FET	DC switch (33M2)
Q5	Transistor	DC switch (33M2)
Q6	FET	DC switch (33BU)
Q7	Transistor	DC switch (33BU)
Q8	FET	DC switch (33AC)
Q9	FET	DC switch (5MC)
Q10	Transistor	DC switch (33AC)
Q11	Transistor	DC switch (5MC)

TROUBLE SHOOTING

Fault diagnosis of the BGA (Ball Grid Array) IC

■ Overview

A flowchart for determining whether or not the transceiver can be powered on (the LCD does not function even if the power switch is turned on) due to broken BGA parts.

■ BGA parts

ASIC (IC708), DSP (IC701), FLASH (IC700), SRAM (IC703)

● Checking power supply voltage

Checking voltage	
Points to be checked	Normal voltage
33M IC2 (5 pin)	3.3V
15M IC8 (5 pin)	1.5V
33A IC7 (5 pin)	3.3V
33BU Q7 (Collector)	3.3V

Power supply of each device is connected through the ferrite bead.
 [ASIC]
 33M: L708, 15M: L709
 [DSP]
 33M: L702, 15M: L701
 [FLASH]
 33M: L700
 [SRAM]
 33BU: L703

When an abnormal value is confirmed.

Checking for an abnormal point	
33M has an abnormal voltage. [ASIC] Remove L708 to check the voltage of the 33M. If the voltage becomes normal, the ASIC is broken. [DSP] Remove L702 to check the voltage of the 33M. If the voltage becomes normal, the DSP is broken.	
[FLASH] Remove L700 to check the voltage of the 33M. If the voltage becomes normal, the FLASH is broken.	
15M has an abnormal voltage. [ASIC] Remove L709 to check the voltage of the 15M. If the voltage becomes normal, the ASIC is broken. [DSP] Remove L701 to check the voltage of the 15M. If the voltage becomes normal, the DSP is broken.	

● Checking the clock

Checking the clock	
Points to be checked	Normal voltage (3.3V)
18.432MHz ASIC side R764	18.432MHz
DSP side R713	18.432MHz
32.768kHz IC704 (1 pin)	32.768kHz

When a normal value is confirmed.

When an abnormal value is confirmed.

33A has an abnormal voltage. [ASIC] Exchange IC7 (33A Regulator) to check the voltage of the 33A. If the voltage becomes normal, the ASIC is broken.
33BU has an abnormal voltage. [SRAM] Remove L703 to check the voltage of the 33BU. If the voltage becomes normal, the SRAM is broken.
If the voltage is not corrected, there is a problem other than the BGA parts.

● Checking the Reset/Control signal

Checking the control signal input to the ASIC	
Points to be checked	Normal voltage
RESET IC705 (4 pin)	3.3V
/BINT IC1 (1 pin)	3.3V
/OVRB D3 (Cathode side)	3.3V

When a normal value is confirmed.

When an abnormal value is confirmed.

Remove the R764 and R713. If it oscillates normally, the DSP and ASIC may be broken. Exchange IC704 (RTC). If it oscillates normally, the ASIC may be broken.
--

Checking the ASIC input switch signal	
*Each signal is not masked by the setting of the FPU. The POWER key is pressed and held.	
Points to be checked /PSW Q201 (Drain)	Confirmed voltage 0V
The ignition key is kept ON.	
Points to be checked /IGN (R825)	Confirmed voltage 0V

When a normal value is confirmed.

The BGA parts are not broken.

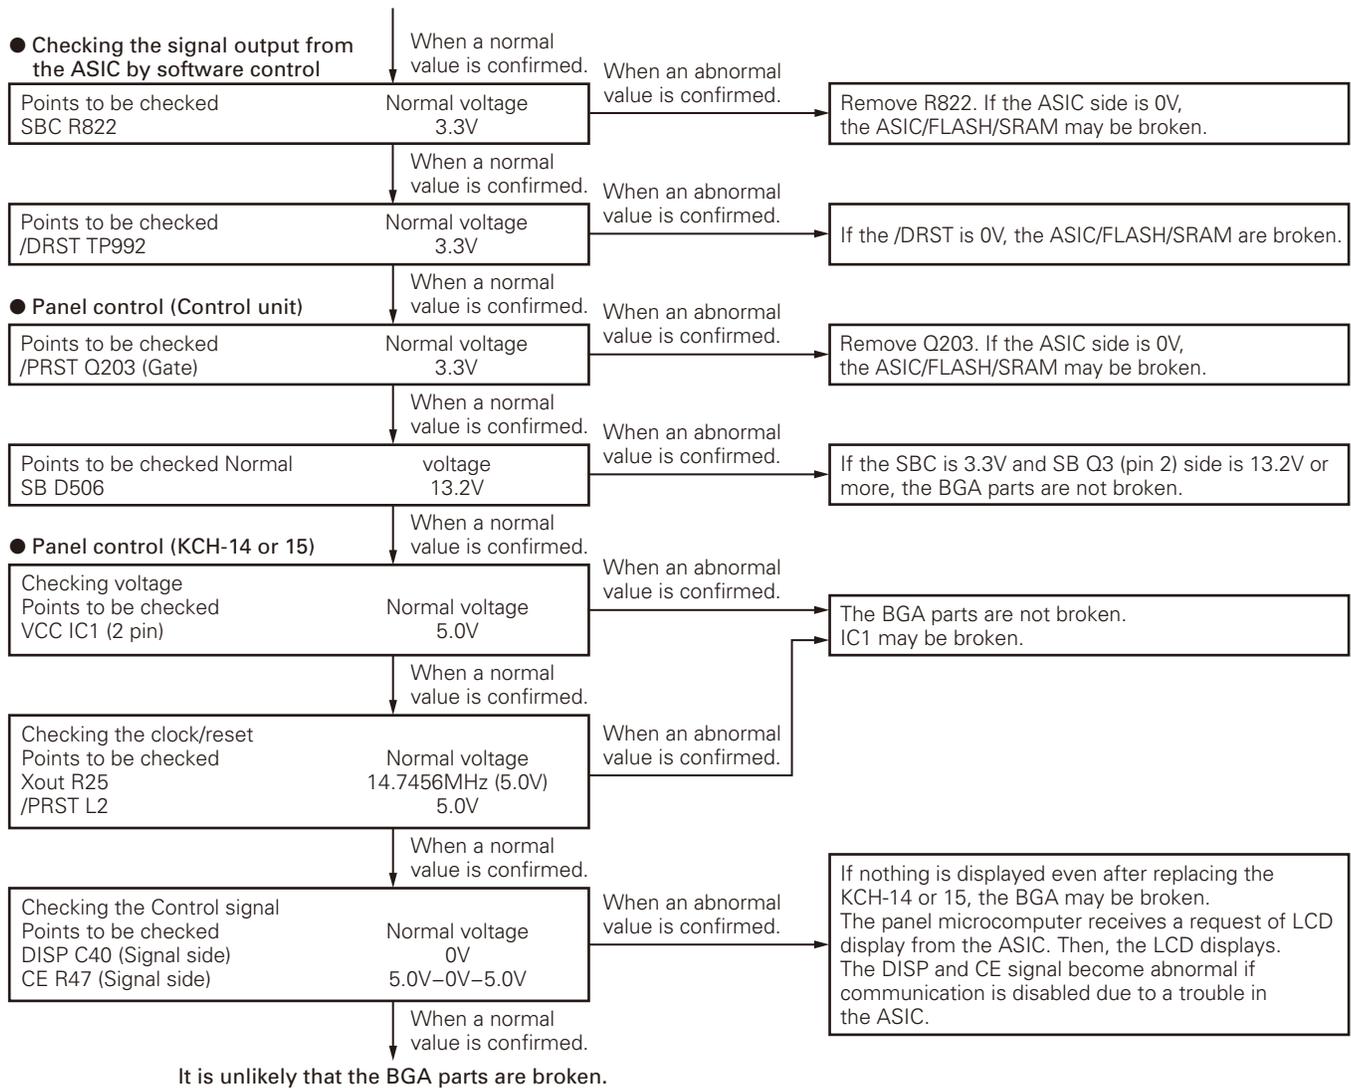

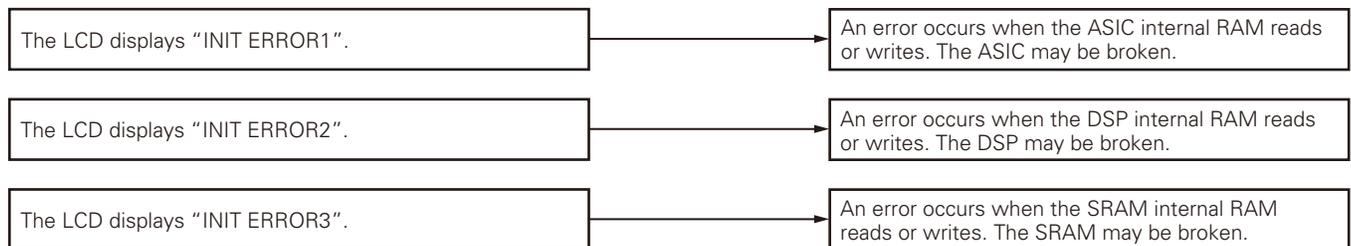

Points to be checked	
/FRST TP991	Normal voltage 3.3V

When a normal value is confirmed.

When an abnormal value is confirmed.

If the /FRST is always 0V, the ASIC is broken.
If the /FRST repeats 3.3V and 0V at intervals, the ASIC, FLASH and SRAM may be broken.

TROUBLE SHOOTING

Panel Test Mode

■ Test mode operation features

This transceiver has a test mode. To enter test mode, press and hold the [PF1] key while turning the transceiver power ON. Test mode can be inhibited by programming. To exit test mode, turn the transceiver power OFF.

- When the panel test mode is activated, the last used channel and signaling numbers are displayed. When the panel test mode is activated for the first time, the channel and signaling numbers are 1.
- If test signaling 26 (Tone Pattern) is selected, the result of Bit Error Rate (BER) calculation is displayed on the LCD. The BER value is also output from the serial port.

■ Key operation

ADJUSTMENT

Panel Tuning Mode

The transceiver is adjusted in this mode.

■ Preparations for tuning the transceiver

Before attempting to tune the transceiver, connect the unit to a suitable power supply.

Whenever the transmitter is turned, the unit must be connected to a suitable dummy load (i.e. power meter).

The speaker output connector must be terminated with a 4Ω dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during tuning.

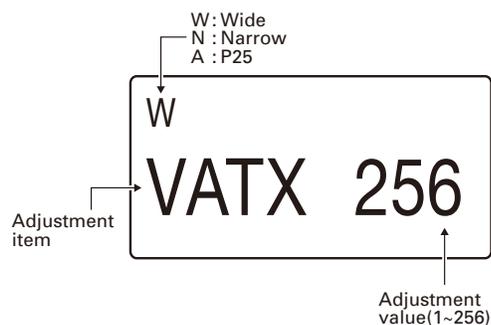

■ Transceiver tuning (To enter tuning mode)

To enter tuning mode, press the [GRP\wedge] key while the transceiver is in test mode.

Use the [PF5] key to write tuning data through tuning modes, and the [PF3] and [PF4] keys to adjust tuning requirements (1 to 256 appears on the LCD).

Use the [PF2] key to select the adjustment item through tuning modes. Use the [GRP\vee] key to exit 3, 5 or 7 reference level adjustments.

• LCD display in the panel tuning mode

■ Key operation

Key	Function
[Selector]	Unused
[GRP\wedge]	Exit the panel tuning mode and shift to the panel test mode.
[GRP\vee]	Exit the 3, 5 or 7 reference level adjustments without backup.
[PF1]	Back to the last adjustment item (The current adjustment data is cleared.)
[PF2]	Go to the next adjustment item (The current adjustment data is cleared.)
[PF3]	Adjustment value down
[PF3] Hold	Adjustment value continuation down
[PF4]	Adjustment value up
[PF4] Hold	Adjustment value continuation up
[PF5]	Enter the 3, 5 or 7 reference level adjustments.
MIC PTT	Transmit

■ 3, 5 or 7 reference level adjustments frequency

ADJUSTMENT

Flow chart

ADJUSTMENT

BER (Bit Error Rate) Measurement

1. The Panel Test Mode is used to measure the BER (Refer to "Test mode operation features" described on page 56.).
2. Select "26" for test signaling (Refer to "Test Signaling" described on page 57.).
When "26" is selected for the test signaling, the filter is automatically selected to "P25".
(If there is no RF input signal, the display shows "500000")
3. Select a filter (Refer to "Filter Mode" described on page 57.).
4. Select a test frequency (Refer to "Test Frequency" described on page 57.).

500000

5. Measure the BER (Bit Error Rate) using the digital radio tester. Enter a standard input signal into the transceiver as a standard tone test pattern.
6. Adjust the input signal level to achieve the standard bit error rate (BER).
(For example, if the BER is 5%, the display shows "050000".)

050000

C4FM (P25) Deviation Adjustment

1. The transceiver adjusts the deviation between High Deviation $\pm 1800\text{Hz}$ for the C4FM (P25).
2. The Symbol Rate Pattern is used when adjusting the High Deviation for the C4FM (P25) (Refer to "Test Signaling" described on page 57.). This test signal has a peak deviation equal to $\pi/2 \cdot 1800\text{Hz} = 2827\text{Hz}$.

ADJUSTMENT

Test Equipment Required for Alignment

Test Equipment		Major Specifications	
1.	Standard Signal Generator (SSG)	Frequency Range Modulation Output	400 to 520MHz Frequency modulation and external modulation -127dBm/0.1μV to greater than -47dBm/1mV
2.	Power Meter	Input Impedance Operation Frequency Measurement Range	50Ω 400 to 520MHz or more Vicinity of 200W
3.	Deviation Meter	Frequency Range	400 to 520MHz
4.	Digital Volt Meter (DVM)	Measuring Range Input Impedance	1 to 20V DC High input impedance for minimum circuit loading
5.	Oscilloscope		DC through 30MHz
6.	High Sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 1000MHz 0.2ppm or less
7.	Ammeter		30A
8.	AF Volt Meter (AF VTVM)	Frequency Range Voltage Range	50Hz to 10kHz 3mV to 3V
9.	Audio Generator (AG)	Frequency Range Output	50Hz to 5kHz or more 0 to 1V
10.	Distortion Meter	Capability Input Level	3% or less at 1kHz 50mV to 10Vrms
11.	Spectrum Analyzer	Measuring Range	DC to 1GHz or more
12.	Tracking Generator	Center frequency Output Voltage	50kHz to 600MHz 100mV or more
13.	4Ω Dummy Load		Approx. 4Ω, 30W
14.	Regulated Power Supply		13.6V (TK-5810(BG)), 13.4V (TK-5810H(BG)) approx. 30A (adjusted from 9 to 20V) Useful if ammeter equipped

Caution

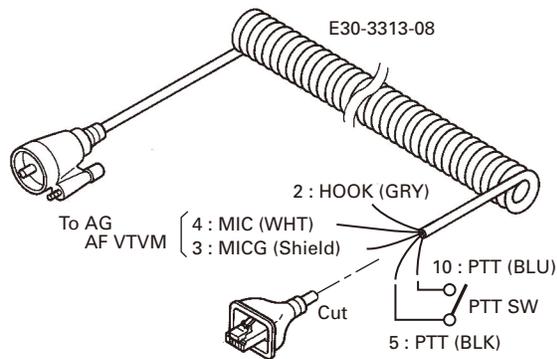

Since the RX AF output is a BTL output, there is a DC Component. Isolate this with a capacitor or transformer as shown in the figure.

TERMINAL FUNCTION

Final unit (X45-3790-XX): TK-5810(BG)

Pin No.	Name	I/O	Function
CN1 (to TX-RX unit CN151)			
1	TX	I	TX drive input
CN2 (to TX-RX unit CN200)			
1	RX	O	RX signal output
CN9 (to TX-RX unit CN601)			
1	FTEMP2	O	Final unit temperature 2
2	FTEMP1	O	Final unit temperature 1
3	8T	-	8V input during transmission
4	8T	-	8V input during transmission
5	E	-	GND
6	PC	I	TX power control voltage
CN13 (to Control unit CN1)			
1	E	-	GND
2	+B	O	Power supply output (13.6V±15%)
3	+B	O	Power supply output (13.6V±15%)
CN14 (to DC cable)			
1	+B	I	Power supply input (13.6V±15%)

Final unit (X45-3800-XX): TK-5810H(BG)

Pin No.	Name	I/O	Function
CN1 (to TX-RX unit CN151)			
1	TX	I	TX drive input
CN2 (to TX-RX unit CN601)			
1	FTEMP2	O	Final unit temperature 2
2	FTEMP1	O	Final unit temperature 1
3	8T	-	8V input during transmission
4	8T	-	8V input during transmission
5	E	-	GND
6	PC	I	TX power control voltage
CN4 (to TX-RX unit CN200)			
1	RX	O	RX signal output
CN5 (to DC cable)			
1	+B	I	Power supply input (13.4V±15%)
CN6 (to DC cable)			
1	E	-	GND
W1 (to Control unit CN1)			
1	+B	O	Power supply output (13.4V±15%)
2	+B	O	Power supply output (13.4V±15%)
3	E	-	GND

Control unit (X53-4400-10)

Pin No.	Name	I/O	Function
CN1 (to Final unit CN13: TK-5820, W1: TK-5810H)			
1	+B	I	Power supply voltage
2	+B	I	Power supply voltage
3	E	-	GND
CN411 (to VGS)			
1	VBUSY	I	BUSY signal (Active High)
2	PLAY	I	PLAY signal (Active High)
3	RXD1	I	Serial data input 1
4	TXD1	O	Serial data output 1
5	BSEL	O	Beat shift
6	EN	O	ENABLE (Active Low)
7	USEL	O	UART SPEED select
8	VRST	O	RESET
9	DE	-	Digital GND
10	E	-	GND
11	AI	I	Audio input (3Vp-p)
12	AO	O	Audio output (100mVp-p)
13	E	-	GND
14	5C	-	Common 5V
15	NC	-	No connection
16	NC	-	No connection
17	NC	-	No connection
18	NC	-	No connection
19	NC	-	No connection
20	NC	-	No connection

23	NC	-	No connection
24	NC	-	No connection
25	NC	-	No connection
26	8C	-	Common 8V
CN424 (to ANI board)			
1	BUSY	O	BUSY signal output. L: TX, H: Not TX L≤0.4V, H≥4.6V / 30kΩ load
2	AKEY	I	TX Control signal input. Active Low L≤0.8V, H≥2.6V
3	NC	-	No connection
4	NC	-	No connection
5	NC	-	No connection
6	PTOA	O	PTT signal output. L: PTT ON, H: PTT OFF L≤0.4V, H≥4.6V / 30kΩ load

TERMINAL FUNCTION

Pin No.	Name	I/O	Function
7	NC	-	No connection
8	EMG	O	EMERGENCY signal output. L: Operated, H: Not operated L \leq 0.4V, H \geq 4.6V / 30k Ω load
9	E	-	GND
10	E	-	GND
11	NC	-	No connection
12	NC	-	No connection
13	E	-	GND
14	5C	-	Common 5V (Standby: 3.5mA / Encoding: 35mA)
15	STON	I	SIDE TONE input. 1kHz 5Vp-p
16	ATXI	I	DATA signal input. Adjustable from 0V to 4.5Vp-p
17	TCONT	I	SPEAKER MUTE signal input. L: Unmute, L \leq 0.8V, H \geq 4.2V
18	NC	-	No connection
19	AINH	I	MIC MUTE signal input. L: Mute, L \leq 0.8V, H \geq 4.2V
20	AUX I/O	I	EMERGENCY signal input. Active Low, L \leq 0.8V, H \geq 4.2V
21	NC	-	No connection
22	NC	-	No connection
23	NC	-	No connection
24	NC	-	No connection
25	NC	-	No connection
26	8C	-	Common 8V
CN444 (to SCRAMBLER board)			
1	BC1	O	SCRAMBLE CODE signal output 1. L \leq 0.4V, H \geq 4.6V / 30k Ω load
2	BC2	O	SCRAMBLE CODE signal output 2. L \leq 0.4V, H \geq 4.6V / 30k Ω load
3	LOK	O	LOK output. L: LOK, H: UN LOK
4	PTOS	O	TX signal output. L: TX, H: Not TX L \leq 0.4V, H \geq 4.6V / 30k Ω load
5	NC	-	No connection
6	ECHO	I/O	ECHO PTT
7	NC	-	No connection
8	BC4	O	SCRAMBLE CODE signal output 4. L \leq 0.4V, H \geq 4.6V / 30k Ω load
9	E	-	GND
10	E	-	GND
11	NC	-	No connection
12	NC	-	No connection
13	E	-	GND
14	5C	-	Common 5V

Pin No.	Name	I/O	Function
15	NC	-	No connection
16	NC	-	No connection
17	T/R	-	No connection
18	NC	-	No connection
19	PTT	-	No connection
20	AC	O	SCRAMBLE CONTROL signal output. L: ON, H: OFF L \leq 0.4V, H \geq 4.6V / 30k Ω load
21	TXO	O	MIC signal output. Z \leq 1k Ω (85mVp-p typ.)
22	RXE0	O	AUDIO signal output. Z \leq 100 Ω (1.2Vp-p typ.)
23	RXEI	I	AUDIO signal input. Z i =27k Ω (1.2Vp-p typ.)
24	STXI	I	MIC signal input. Z \leq 100k Ω
25	BC3	O	SCRAMBLE CODE signal output 3. L \leq 0.4V, H \geq 4.6V / 30k Ω load
26	8C	-	Common 8V
CN457 (for production)			
1~20			
CN459 (to D-SUB 25pin connector)			
1	NC	-	No connection
2	SB	-	Switched B
3	RXD2	I	Serial data input 2
4	AUXO2	O	Auxiliary output 2
5	TXD2	O	Serial data output 2
6	AUXO1	O	Auxiliary output 1
7	AUX I/O 9	I/O	Auxiliary input/output 9
8	AFO	O	RX audio signal output
9	DI	I	Data signal input
10	GND	-	GND
11	MI2	I	External MIC input
12	DEO	O	Detected signal output
13	GND	-	GND
14	AUX I/O 5	I/O	Auxiliary input/output 5
15	AUX I/O 8	I/O	Auxiliary input/output 8
16	AUX I/O 4	I/O	Auxiliary input/output 4
17	TXD3	O	Serial data output 3
18	AUX I/O 3	I/O	Auxiliary input/output 3
19	RXD3	I	Serial data input 3
20	AUX I/O 2	I/O	Auxiliary input/output 2
21	GND	-	GND
22	AUX I/O 1	I/O	Auxiliary input/output 1
23	AUX I/O 7	I/O	Auxiliary input/output 7

TERMINAL FUNCTION

Pin No.	Name	I/O	Function
24	ME	-	MIC GND
25	AUX I/O 6	I/O	Auxiliary input/output 6
26	GND	-	GND
27	NC	-	No connection
28	NC	-	No connection
29	NC	-	No connection
30	NC	-	No connection
CN501 (to TX-RX unit CN600)			
1	E	-	GND
2	CV	I	Controlled voltage of VCO
3	FTEMP2	I	Final unit temperature 2
4	FTEMP1	I	Final unit temperature 1
5	PCS	O	Chip select of potentiometer
6	L2FT	O	Tuning frequency of 2nd local
7	UL	I	Lock detect of PLL
8	EP	O	Enable of PLL
9	WN2	-	Switch of ceramic filter (H: Wide / L: Narrow)
10	MO	O	Modulation signal for VCO
11	MB	O	Modulation and Frequency control signal for VCXO
12	8C	-	Common 8V
13	8C	-	Common 8V
14	8C	-	Common 8V
15	8C	-	Common 8V
16	DAT	O	DATA
17	SOE3	O	Enable of shift register 3
18	CLK	O	CLOCK
19	STRB3	O	Chip select of shift register 3
20	8T	-	8V output during transmission
21	Vref	-	Reference voltage
22	E	-	GND
23	DET	I	Detection signal output
24	E	-	GND
25	PC	O	TX power controlled voltage
26	E	-	GND
27	IF_IN	I	IF signal
28	IF_IN	I	IF signal
29	IF_IN	I	IF signal
30	E	-	GND

Pin No.	Name	I/O	Function
31	E	-	GND
32	E	-	GND
33	ASQL	I	Analog squelch signal output
34	RSSI	I	RSSI signal output
35	TV	O	Tuning voltage signal input for RX BPF
36	E	-	GND
CN502 (to ACC9pin connector)			
1	IGN	I	Ignition sense input.
2	E	-	GND
3	HR1	O	Horn alert signal output 1. (1A max)
4	HR2	O	Horn alert signal output 2. (1A max)
5	OS2	O	BTL output for external speaker B (PA).
6	OS1	O	BTL output for external speaker B (PA).
7	ES2	O	BTL output for external speaker A.
8	ES1	O	BTL output for external speaker A.
9	IRS	I	Remote speaker switch.
CN503 (to KRK-X)			
1	AFO	O	RX audio signal output for Head2
2	DE3	I/O	Detection signal
3	E	-	GND
4	EI	O	ENABLE of shift register
5	CLK	O	CLOCK
6	DAT	O	DATA
7	RESET	O	RESET
8	5C	-	Common 5V
9	PSC	I/O	Power switch control signal
10	CS	O	Chip select of D/A converter
CN504 (to Display unit CN1)			
1	ES2	O	Output for remote speaker
2	IRS	O	Output for remote speaker
3	SB	O	Switched B
4	IGN	I	Ignition sense input.
5	PSW	I	Power switch control signal input
6	TRD	I/O	TX data output / RX data input
7	1/2	O	Remote head 1 signal output
8	RESET	O	RESET
9	GND	-	GND
10	MIC	I	MIC signal input
11	ME	I	MIC GND

TERMINAL FUNCTION

TX-RX unit (X57-7270-XX)

Pin No.	Name	I/O	Function
CN150			
1	TX	O	TX drive output
CN151 (to Final unit CN1)			
1	TX	O	TX drive output
CN200 (to Final unit CN2: TK-5810, CN4: TK-5810H)			
1	RX	I	RX signal input
CN202 (for MCF adjustment)			
1	MCFin	I	MCF input
2	E	-	GND
CN207 (for MCF adjustment)			
1	MCFOUT	O	MCF output
2	E	-	GND
CN600 (to CONT unit CN501)			
1	E	-	GND
2	TV	I	Tuning voltage signal input for RX BPF
3	RSSI	O	RSSI signal output
4	ASQL	O	Analog squelch signal output
5~7	E	-	GND
8~10	IF IN	O	IF signal
11	E	-	GND
12	PC	I	TX power control voltage
13	E	-	GND
14	DET	O	Detection signal output
15	E	-	GND
16	Vref	-	Reference voltage
17	8T	-	8V input during transmission
18	STRB3	I	Enable of shift register 3
19	CLK	I	Clock input
20	SOE3	I	Chip select of shift register 3
21	DAT	I	Data input
22~25	8C	-	Common 8V
26	MB	I	Modulation and frequency control signal for VCO
27	MO	I	Modulation signal for VCO
28	WN $\bar{2}$	I	Switch of ceramic filter (H: Wide / L: Narrow)
29	EP	I	Enable of PLL
30	UL	O	Lock detection of PLL
31	L2FT	I	Tuning frequency of 2nd local
32	PCS	I	Chip select of potentiometer
33	FTEMP1	O	Final unit temperature 1

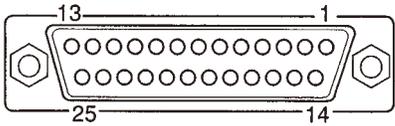

Pin No.	Name	I/O	Function
34	FTEMP2	O	Final unit temperature 2
35	CV	O	Control voltage of VCO
36	E	-	GND
CN601 (to Final unit CN9: TK-5810, CN2: TK-5810H)			
1	PC	O	TX power control voltage
2	E	-	GND
3	8T	-	8V input during transmission
4	8T	-	8V input during transmission
5	FTEMP1	I	Final unit temperature 1
6	FTEMP2	I	Final unit temperature 2

D-SUB 25pin connector

Pin No.	Name	I/O	Function
1	NC (RSSI)	O	NC / (RSSI signal output)
2	RXD2	I	Serial data input 2. RS-232C Level ($\pm 30V$ max.) $L \leq 0.4V$, $H \geq 2.4V$, $Z_i \geq 5k\Omega$
3	TXD2	O	Serial data output 2. RS-232C Level $L \leq -5V$, $H \geq 5V / 3k\Omega$ load, $Z_o \leq 2k\Omega$
4	AUX I/O 9 (RTS)	I/O	Auxiliary input/output 9 (FPU selectable)/ (RTS) Active low with 47k Ω pull up to 5V $L \leq 0.8V$, $H \geq 4.2V$
5	DI (CTS)	I	Data signal input / (CTS). $Z_i \geq 10k\Omega$ Deviation: 60% Dev or more (at 1kHz/2Vp-p) Frequency Response: +3~-3dB (20Hz~9.6kHz) (0dB: 1kHz 60% Dev.)
6	MI2	I	External MIC input. $Z_i = 600\Omega$ Deviation: 60% Dev (at 1kHz/5 $\pm 2mV$ input) Frequency Response : Compliance with TIA/EIA-603
7	E	-	GND
8	AUX I/O 8	I/O	Auxiliary input/output 8 (FPU selectable) Active low with 47k Ω pull up to 5V $L \leq 0.8V$, $H \geq 4.2V$
9	TXD3	O	Serial data output 3 Default: CMOS level $L \leq 0.7V$, $H \geq 4.2V / 25k\Omega$ load, $Z_o \leq 1k\Omega$ After remodelling: RS-232C Level $L \leq -5V$, $H \geq 5V / 3k\Omega$ load, $Z_o \leq 2k\Omega$
10	RXD3	I	Serial data input 3 Default: CMOS level (0~5V max) $L \leq 0.8V$, $H \geq 4.2V$ After remodelling: RS-232C Level ($\pm 30V$ max) $L \leq -5V$, $H \geq 5V$
11	E	-	GND
12	AUX I/O 7	I/O	Auxiliary input/output 7 (FPU selectable) Active low with 47k Ω pull up to 5V $L \leq 0.8V$, $H \geq 4.2V$

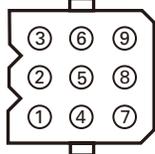

TERMINAL FUNCTION

Pin No.	Name	I/O	Function
13	AUX I/O 6	I/O	Auxiliary input/output 6 (FPU selectable) Active low with 47kΩ pull up to 5V L≤0.8V, H≥4.2V
14	SB	-	Switched B (13.6V±15%). 2A max
15	AUXO 2	O	Auxiliary output 2 (FPU selectable) Active low: Open collector (Max 500mA)
16	AUXO 1	O	Auxiliary output 1 (FPU selectable) Active low: Open collector (Max 500mA)
17	AFO	O	RX audio signal output. Zo≤1kΩ PA: MIC signal output. 0.65Vp-p typ. (1kHz/5mV input) RX: RX low level output. (W)1.3Vp-p typ., (N)1.1Vp-p typ. (at Standard modulation)
18	E	-	GND
19	DEO	O	Detected signal output. Zo≤600kΩ 500mVp-p (at 1kHz 60% Dev./ -53dBm) Frequency response (0dB: 1kHz 60% Dev.) (wide) 20Hz~4.8kHz: +1/-6dB, 4.8kHz~9.6kHz: +1/-24dB (narrow) 20Hz~4.8kHz: +1/-15dB
20	AUX I/O 5	I/O	Auxiliary input/output 5 (FPU selectable) Active low with 47kΩ pull up to 5V L≤0.8V, H≥4.2V
21	AUX I/O 4	I/O	Auxiliary input/output 4 (FPU selectable) Active low with 47kΩ pull up to 5V L≤0.8V, H≥4.2V
22	AUX I/O 3	I/O	Auxiliary input/output 3 (FPU selectable) Active low with 47kΩ pull up to 5V L≤0.8V, H≥4.2V
23	AUX I/O 2	I/O	Auxiliary input/output 2 (FPU selectable) Active low with 47kΩ pull up to 5V L≤0.8V, H≥4.2V
24	AUX I/O 1	I/O	Auxiliary input/output 1 (FPU selectable) Active low with 47kΩ pull up to 5V L≤0.8V, H≥4.2V
25	ME	-	MIC GND

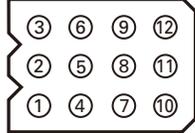

Accessory 9pin connector

Pin No.	Name	I/O	Function
1	IGN	I	Ignition sense input.
2	ES2	O	BTL output for external speaker A.
3	RS1	I	Remote speaker switch.
4	HR1	O	Horn alert signal output1. (1A max)
5	HR2	O	Horn alert signal output2. (1A max)
6	ES1	O	BTL output for external speaker A.
7	OS1	O	BTL output for external speaker B (PA).
8	OS2	O	BTL output for external speaker B (PA).
9	E	-	GND

Accessory 12pin connector (Head)

Pin No.	Name	I/O	Function
1	IGN	I	Ignition sense input.
2	SB	O	Switched B (TK-5810(BG): 13.6V±15%/ TK-5810H(BG): 13.4V±15%)
3	E	-	GND
4	MIC	I	MIC signal input / 60% Dev at 1kHz/5±2mV input
5	ME	-	MIC GND

LEVEL DIAGRAM

Receiver Section

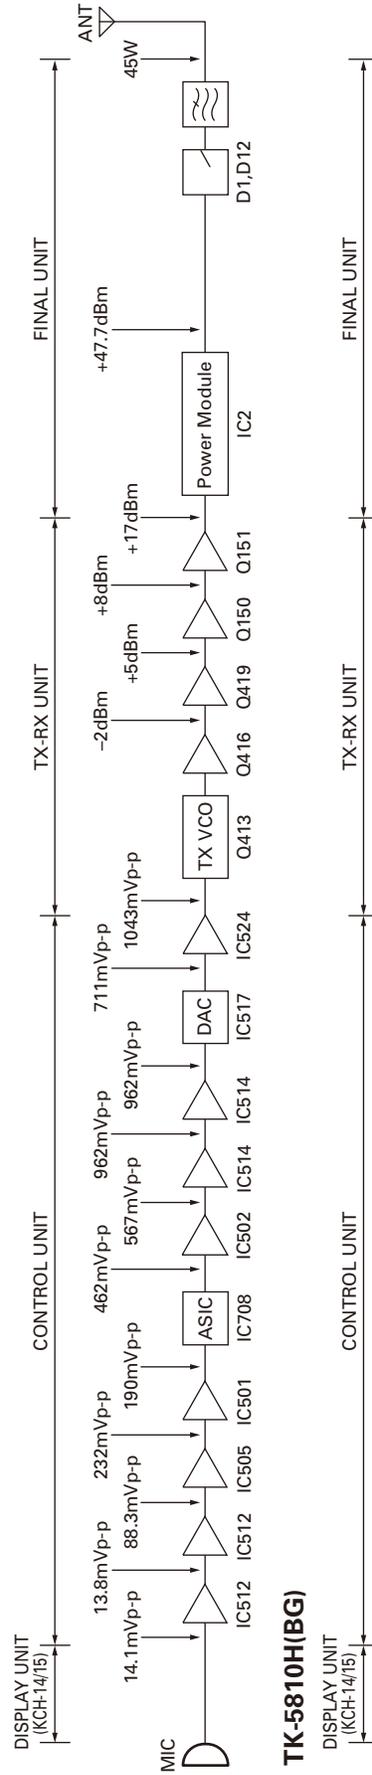

To make measurement in the AF section, connect the AC level meter. (ANT input: -53dBm, 1kHz FM, 3kHz DEV (Wide).) In the RF section, use a 470pF coupling capacitor. (The display shows the SSG input value required to obtain 12dB SINAD.)

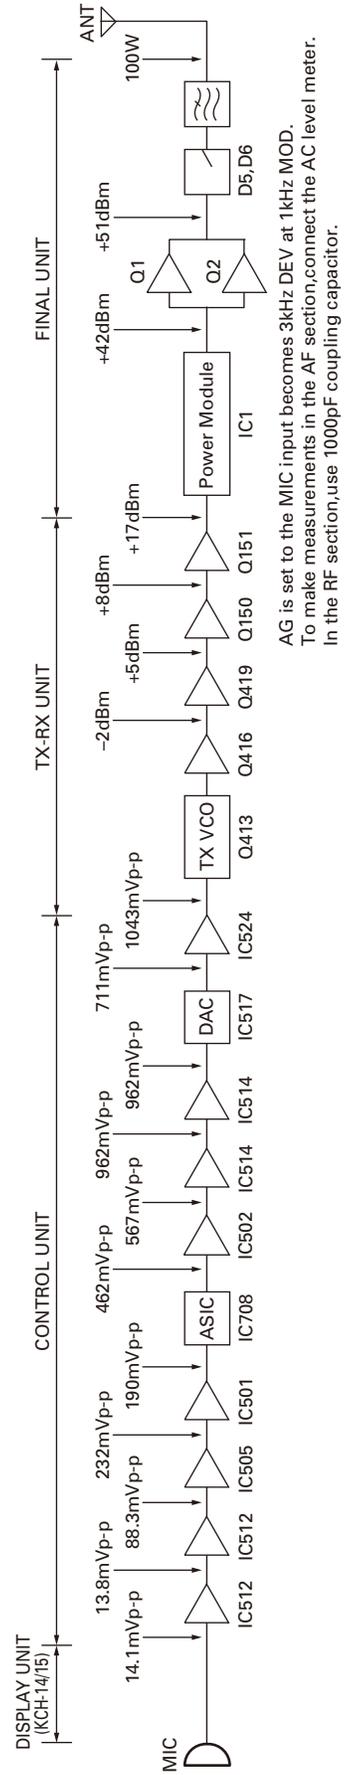

Transmitter Section

TK-5810(BG)

TK-5810H(BG)

AG is set to the MIC input becomes 3kHz DEV at 1kHz MOD. To make measurements in the AF section, connect the AC level meter. In the RF section, use 1000pF coupling capacitor.

SPECIFICATIONS

GENERAL

Frequency Range	
K.....	450~520MHz
K2.....	400~470MHz
Number of Channels	1024
Zones	100
Max. Channels per Zone.....	512
Channel Spacing	
Analog.....	12.5/25kHz
Digital.....	12.5kHz
Operating Voltage	
TK-5810.....	13.6V DC \pm 15%
TK-5810H.....	13.4V DC \pm 15%
Current Drain	
Standby.....	Less than 0.6A
Receive.....	Less than 2.3A
Transmit	
TK-5810.....	12A
TK-5810H.....	25A
Duty Cycle.....	Transmit: 20%
Operating Temperature Range	
.....	-22°F to +140°F (-30°C to +60°C)
Frequency Stability	\pm 2.0ppm (-22°F to +140°F)
Antenna Impedance	50 Ω
Dimensions (W x H x D) (Projections included)	
RF Deck only	
TK-5810.....	7.01 x 2.36 x 7.68 in. (178 x 60 x 195 mm)
TK-5810H.....	7.01 x 2.36 x 12.87 in. (178 x 60 x 327 mm)
with KCH-14 or KCH-15	
TK-5810.....	7.05 x 2.36 x 9.09 in. (179 x 60 x 231 mm)
TK-5810H.....	7.05 x 2.36 x 14.29 in. (179 x 60 x 363 mm)
Weight (net)	
RF Deck only	
TK-5810.....	5.3lbs. (2.4kg)
TK-5810H.....	8.6lbs. (3.9kg)
with KCH-14	
TK-5810.....	5.9lbs. (2.7kg)
TK-5810H.....	9.2lbs. (4.2kg)
with KCH-15	
TK-5810.....	5.9lbs. (2.7kg)
TK-5810H.....	9.2lbs. (4.2kg)

RECEIVER

Sensitivity	
Digital (5% BER)	0.25 μ V
Digital (1% BER)	0.40 μ V
