### INTRODUCTION

#### SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of this publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions, which are issued as required.

### ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts : components, kits, and chassis. If the part number is not known, include the chassis or kit number of which it is a part and a sufficient description of the required component, for proper identification.

### PERSONNEL SAFETY

The following precautions are recommended for personnel safety :

- DO NOT transmit if someone is within two feet (0.6 meter) of the antenna.
- DO NOT transmit until all RF connectors are secure and any open connectors are properly terminated.
- SHUT OFF this equipment when near electrical blasting caps or while in an explosive atmosphere.
- All equipment should be properly grounded before power-up for safe operation.
- This equipment should be serviced by only qualified technicians.

### PRE-INSTALLATION CONSIDERATIONS

#### 1. UNPACKING

Unpack the radio from its shipping container and check for accessory items. If any item is missing, please contact KENWOOD immediately.

#### 2. PRE-INSTALLATION CHECKOUT

##### 2-1. Introduction

Each radio is adjusted and tested before shipment. However, it is recommended that receiver and transmitter operation be checked for proper operation before installation.

##### 2-2. Testing

The radio should be tested complete with all cabling and accessories as they will be connected in the final installation. Transmitter frequency, deviation, and power output should be checked, as should receiver sensitivity, squelch operation, and audio output. QT equipment operation should be verified.

### 3. PLANNING THE INSTALLATION

#### 3-1. General

Inspect the vehicle and determine how and where the radio antenna and accessories will be mounted.

Plan cable runs for protection against pinching or crushing wiring, and radio installation to prevent overheating.

#### 3-2. Antenna

The favored location for an antenna is in the center of a large, flat conductive area, usually at the roof center. The trunk lid is preferred, bond the trunk lid and vehicle chassis using ground straps to ensure the lid is at chassis ground.

#### 3-3. Radio

The universal mount bracket allows the radio to be mounted in a variety of ways. Be sure the mounting surface is adequate to support the radio's weight. Allow sufficient space around the radio for air cooling. Position the radio close enough to the vehicle operator to permit easy access to the controls when driving.

#### 3-4. DC Power and wiring

1. This radio may be installed in negative ground electrical systems only. Reverse polarity will cause the cable fuse to blow. Check the vehicle ground polarity before installation to prevent wasted time and effort.
2. Connect the positive power lead directly to the vehicle battery positive terminal. Connecting the Positive lead to any other positive voltage source in the vehicle is not recommended.
3. Connect the ground lead directly to the battery negative terminal.
4. The cable provided with the radio is sufficient to handle the maximum radio current demand. If the cable must be extended, be sure the additional wire is sufficient for the current to be carried and length of the added lead.

# GENERAL / OPERATING FEATURES

## 4. INSTALLATION PLANNING – CONTROL STATIONS

### 4-1. Antenna system

Control station. The antenna system selection depends on many factors and is beyond the scope of this manual. Your KENWOOD dealer can help you select an antenna system that will best serve your particular needs.

### 4-2. Radio location

Select a convenient location for your control station radio which is as close as practical to the antenna cable entry point. Secondly, use your system's power supply (which supplies the voltage and current required for your system). Make sure sufficient air can flow around the radio and power supply to allow adequate cooling.

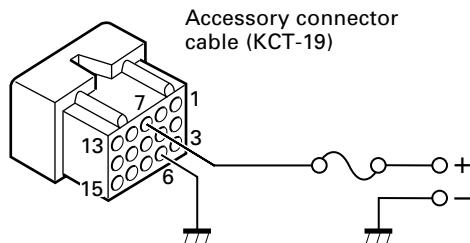

## SERVICE

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained in this manual.

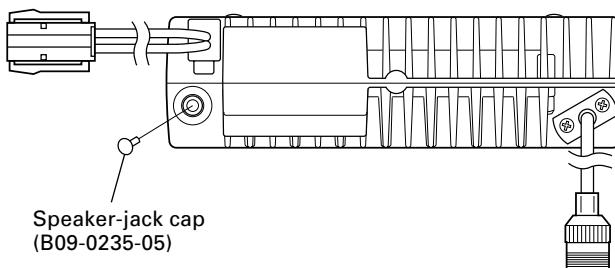

### Note

When you modify your radio as described in system set-up, take the following precaution.

The rating of pin 7 (SB) of the accessory connector cable (KCT-19) on the rear of the radio is 13.6V (0.75A). Insert a 1A fuse if you use the SB pin for external equipment.

If you do not intend to use the 3.5-mm jack for the external speaker, fit the supplied speaker-jack cap (B09-0235-05) to stop dust and sand getting in.

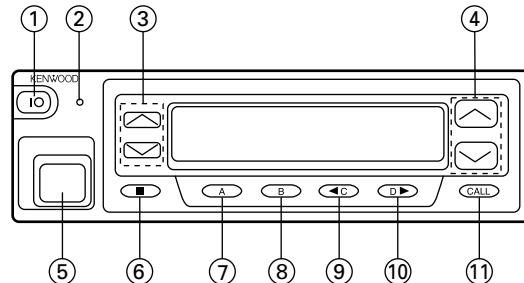

## OPERATING FEATURES

### 1. Transceiver Controls and Indicators (Fig. 1)

#### 1-1. The Basics

Features listed in this section are available for both Trunking and Conventional modes. Mode specific features can be found in their corresponding sections in this manual.

- **Front panel**

**Fig. 1**

#### ① IO (Power) switch

Press to switch the transceiver ON (or OFF).

#### ② Transmit/Receive indicator

#### ③ ▲/▼ (Volume) keys

#### ④ ▲/▼ (Control) keys

#### ⑤ Microphone jack

Insert the microphone plug into this connector.

#### ⑥ ■ key

#### ⑦ A key

#### ⑧ B key

#### ⑨ ◀ C key

#### ⑩ D ▶ key

#### ⑪ CALL key

#### 1-2. Trunking Mode

- **Key functions**

The numbers correspond to the Figure 1.

#### ② Transmit indicator

Lights red while transmitting.

#### ④ ▲/▼ (Control) keys

Press these keys to select your desired call address (voice calls) or status (status calls).

#### ⑥ ■ key

Press to end the current call.

#### ⑦ A key (default setting : Status/Stack)

Press to activate its auxiliary function.

#### ⑧ B key (default setting : Redial)

Press to activate its auxiliary function.

# TK-885

## OPERATING FEATURES / REALIGNMENT

### ⑨ ◀ C key (Default setting : None)

Press to activate its auxiliary function. Also press to scroll left while viewing stack entries.

### ⑩ D ▶ key (Default setting : None)

Press to activate its auxiliary function. Also press to scroll right while viewing stack entries.

### ⑪ CALL key

Press to call the displayed call address.

#### • Display

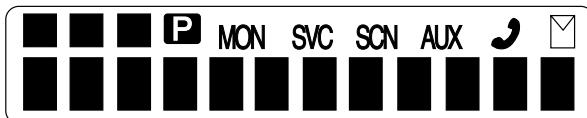

Fig. 2

█████ displays the strength of received signals, the output power (high or low), status numbers, and received call types.

SVC appears when a control channel is found. It flashes while the transceiver is searching for a control channel.

📞 flashes when you activate call diversion.

✉️ appears while there is data in the stack. It flashes when there is new data in the stack.

██████████████ displays call addresses, the call duration timer, data messages, and the current operating status of the transceiver.

### 1-3. Conventional Mode

#### • Key functions

The numbers correspond to the Figure 1.

### ② Transmit/Receive indicator

Lights red while transmitting.

Lights green while receiving a signal.

### ④ ⌈/⌋ (Control) keys

Press these keys to select your desired channel.

### ⑥ █ key

Press to return to Trunking mode.

### ⑦ A key

Press to turn Scan ON (or OFF).

### ⑧ B key

Press to add/remove channels to/from Scan.

### ⑪ CALL key

Press to turn the squelch OFF in order to monitor your selected channel.

#### • Display (Refer to Figure 2)

█████ displays the strength of received signals.

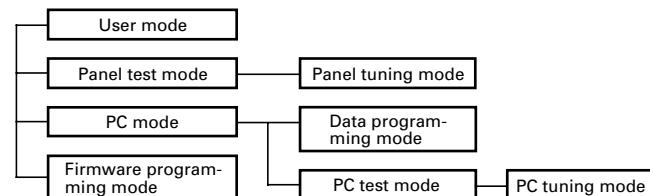

MON appears while you are monitoring a channel by pressing the CALL key.

SCN appears while you are scanning.

██████████████ displays channel numbers and the current operating status of the transceiver.

## REALIGNMENT

### 1. Modes

Mode	Function
User mode	For normal use.
Panel test mode	Used by the dealer to check the fundamental characteristics.
Panel tuning mode	Used by the dealer to tune the radio.
PC mode	Used for communication between the radio and PC (IBM compatible).
Data programming mode	Used to read and write frequency data and other features to and from the radio.
PC test mode	Used to check the radio using the PC. This feature is included in the FPU. See panel tuning.
Firmware programming mode	Used when changing the main program of the flash memory.

### 2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
Panel test mode	[B]+Power ON
PC mode	Received commands from PC
Panel tuning mode	[Panel test mode]+[A]
Firmware programming mode	[A]+Power ON

### 3. Panel Test Mode

Setting method refer to ADJUSTMENT.

### 4. Panel Tuning Mode

Setting method refer to ADJUSTMENT.

# REALIGNMENT

## 5. PC Mode

### 5-1. Preface

The TK-885 transceiver is programmed by using a personal computer, programming interface (KPG-46) and programming software (KPG-62D).

The programming software can be used with an IBM PC or compatible. Figure 1 shows the setup of an IBM PC for programming.

### 5-2. Connection Procedure

1. Connect the TK-885 to the personal computer with the interface cable.
2. When the Power switch on, user mode can be entered immediately. When PC sends command the radio enter PC mode, and "PROGRAM" is displayed on the LCD. When data transmitting from transceiver, the red LED is blinking.  
When data receiving to transceiver, the green LED is blinking.

#### Notes :

- The data stored in the personal computer must match model type, when it is written into the flash memory.
- Change the TK-885 to PC mode, then attach the interface cable.

### 5-3. KPG-46 Description

#### (PC programming interface cable : Option)

The KPG-46 is required to interface the TK-885 to the computer. It has a circuit in its D-subconnector (25-pin) case that converts the RS-232C logic level to the TTL level.

The KPG-46 connects the modular microphone jack of the TK-885 to the computers RS-232C serial port.

### 5-4. Programming Software KPG-62D Description

The KPG-62D is the programming software for the transceiver supplied on two 3.5" floppy disks. This software runs under MS-Windows 95/98 on an IBM-PC or compatible machine.

The data can be input to or read from the transceiver and edited on the screen. The programmed or edited data can be printed out. It is also possible to tune the transceiver.

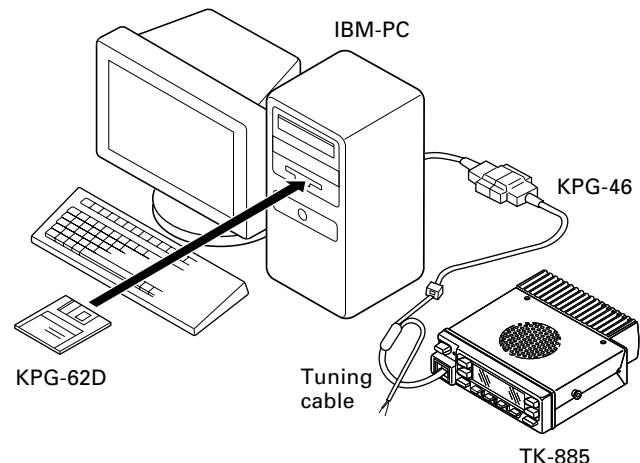

We recommend that install the KPG-62D for example to hard disk first then use it.

### 5-5. Programming With IBM PC

If data is transferred to the transceiver from an IBM PC with the KPG-62D, the destination data (basic radio information) for each set can be modified. Normally, it is not necessary to modify the destination data because their values are determined automatically when the frequency range (frequency type) is set.

The values should be modified only if necessary.

Data can be programmed into the flash memory in RS-232C format via the modular microphone jack.

**Fig. 1**

## 6. Firmware Programming Mode

### 6-1. Preface

Flash memory is mounted on the TK-885. This allows the TK-885 to be upgraded when new features are released in the future. (For details on how to obtain the firmware, contact Customer Service.)

### 6-2. Connection Procedure

Connect the TK-885 to the personal computer (IBM PC or compatible) with the interface cable (KPG-46). (Connection is the same as in the PC Mode.)

### 6-3. Programming

1. Start up the programming software (Fpro. exe).
2. Set the communications speed (normally, 57600 bps) and communications port in the configuration item.
3. Set the firmware to be updated by File name item.
4. Turn the TK-885 Power ON with the [A] switch held down. Hold the switch down until the display changes to "PROG 57600". When "PROG 57600" appears, release your finger from the switch.
5. Check the connection between the TK-885 and the personal computer, and make sure that the TK-885 is in the Program mode.
6. Press write button in the window. A window opens on the display to indicate progress of writing. When the TK-885 starts to receive data, the **P** icon is blinking.
7. If writing ends successfully, the LED on the TK-885 lights and the checksum is displayed.
8. If you want to continue programming other TK-885, repeat steps 4 to 7.

## REALIGNMENT / INSTALLATION

**Notes :**

- This mode cannot be entered if the Firmware programming mode is set to Disable in the Programming software (KPG-62D).
- When programming the firmware, it is recommended to copy the data from the floppy disk to your hard disk before update the radio firmware.
- Directly copying from the floppy disk to the radio may not work because the access speed is too slow.

**6-4. Function**

1. If you press the [■] switch while "PROG 57600" is displayed, the version is displayed. If you press the [■] switch again while the version is displayed, "PROG 57600" is redisplayed.
2. If you press the [D▶] switch while "PROG 57600" is displayed, the display changes to "PROG 19200" to indicate that the write speed is low speed (19200 bps). If you press the [D▶] switch again while "PROG 19200" is displayed, the display changes to "PROG 38400", and the write speed becomes the middle speed (38400 bps). If you press the [D▶] switch again while "PROG 38400" is displayed, the display returns to "PROG 57600".
3. If you press the [D▶] switch while the version is displayed, the checksum is displayed. If you press the [D▶] switch again while the checksum is displayed, the version is redisplayed.

**Note :**

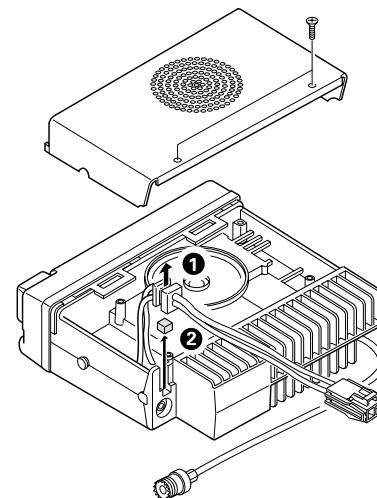

Normally, write in the high-speed mode.

**INSTALLATION****1. Accessory Connection Cable  
(KCT-19 : Option)**

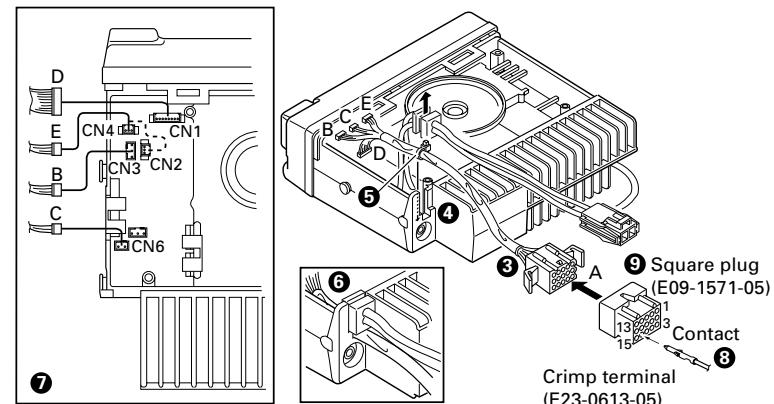

The KCT-19 is an accessory connection cable for connecting external equipment. The connector has 15 pins and the necessary signal lines are selected for use.

**1-1. Installing the KCT-19 in the transceiver**

1. Remove the upper and lower half of the transceiver case, and lift the DC cord bushing (①) from the chassis.
2. Remove the pad as shown in Figure 1 (②).
3. Insert the KCT-19 cable (③) into the chassis (④).  
The wire harness band (⑤) must be inside the chassis.
4. Replace the DC cord bushing (⑥).
5. Connect the KCT-19 to the TX-RX unit (A/2) as shown in Figure 2 (⑦).
6. Connect the KCT-19 to the external accessory by inserting the crimp terminal (⑧) into the square plug (⑨), both of which are supplied with the KCT-19.

**Fig. 1**

**Fig. 2**

# INSTALLATION

## 1-2. KCT-19 Accessory Port Function

No. (A)	No. (B,C,D,E)	Name	Function	Note
1	D-2	AHK	No function.	
2	D-5	ME	Microphone ground.	*1
		AM	Speaker audio mute input.	
3	D-3	IGN	Ignition sense input.	
4	D-1	DEO	Receiver detector output.	
5	D-6	MI	External microphone input.	*1
		TXS	Transmitter sense output.	
6	B-2	E	Ground.	
7	B-3	SB	Switched B+, DC 13.6V output. Maximum 0.75A	
8	D-7	PTT	No function.	
9	D-4	DI	Data modulation input.	
10	B-1	HOR	Horn alert/call output.	
11	D-8	SQ	No function.	
12	C-1	SP	Speaker audio output.	
13	E-1	CN2 and CN4	LOK	No function.
				*1 *2
14	E-2	CN2	AM	Speaker mute input.
		CN4	RXD	Serial control data input.
15	E-3	CN2	MM	MIC mute input, active high.
		CN4	TXD	Serial control data output.
		CN2	DTC	No function.
		*1	LOK	No function.
			TXS	No function.
		FSW		Foot switch input, active low

### Note

\*1 : The functions of A-2, A-5, A-13 (when connector E is connected to CN2), and A-15 (when connector E is connected to CN2) are changed as described in the jumper chart.

\*2 : The functions of A-13, A-14 and A-15 are changed if the connector E is connected to CN2 or CN4 of the radio.

No.	CN2	CN4
E-1	LOK/AM	LOK
E-2	MM	RXD
E-3	LOK/DTC/TXS/FSW	TXD

- Connect CN6 of the radio to connector C of the KCT-19 instead of to the internal speaker connector, if use external speaker.

## 1-3. Data Equipment Connection

The jumpers must be set to either one for each function. Otherwise, the radio will not work properly.

### ME/AM

R12 (0Ω)	R167 (0Ω)	Function / Default	
Yes	No	AM	Default
No	Yes	ME	

### MI/TXS

R94 (0Ω)	R24 (0Ω)	Function / Default

## INSTALLATION

**2. Accessory Terminal (TX-RX Unit)****2-1. External Connector Accessory Terminal Method**

Connector No.	Pin No.	Pin name	I/O	Function
CN1	1	DEO	O	Detect signal output. (Output level : 250mVrms; standard modulation)
	2	AHK	I	No function.
	3	IGN	I	Ignition sense input.
	4	DI	I	External modulation signal input.
	5	ME	-	MIC earth.
		AM	I	Audio mute signal input.
	6	MI	I	Internal MIC input.
		TXS	O	No function.
CN2	7	PTT	I	No function.
	8	SQ	O	No function.
	1	AM	I	Audio mute signal input.
		LOK	O	No function.
	2	MM	I	MIC mute input.
CN3	3	DTC	I	No function.
		TXS	O	No function.
		FSW	I	Foot switch signal input. Foot sw on : L, Foot sw off : H
		LOK	O	No function.
CN4	1	HOR	O	Horn alert signal output. Signal output for horn relay drive (open collector). L level during horn drive : Max. sink current 100mA. L level when AUX A is on.
	2	E	-	Earth.
	3	SB	O	Power output after power switch (DC 13.6V±15%, 0.75A max.).
CN5	1	LOK	O	No function.
	2	RXD	I	Serial data input 1.
	3	TXD	O	Serial data output 1.
CN6	1	PA	O	Relay for PA function in KAP-1 control signal. PA on : H, PA off : L
	2	SPO	O	Audio signal input from KAP-1.
	3	SPI	I	Audio signal output to KAP-1.

**3. Optional Board Terminal**

Terminal is for mounting the option board are provided at the TX-RX unit (A/2) and TX-RX unit (B/2). The table below shows the correspondence between the board and terminals. Disconnect R529 and R571 in TX-RX unit (B/2) when the scrambler board is attached.

The table below shown the differences between the schematic terminals and the PC board terminals.

Schematic diagram			PC board view	
Name	I/O	Function	Name	Unit
SB	O	Switched B+ (13.6V 0.75A)	SB	TX-RX (A/2)
5C	O	5C	5C	TX-RX (A/2)

## INSTALLATION

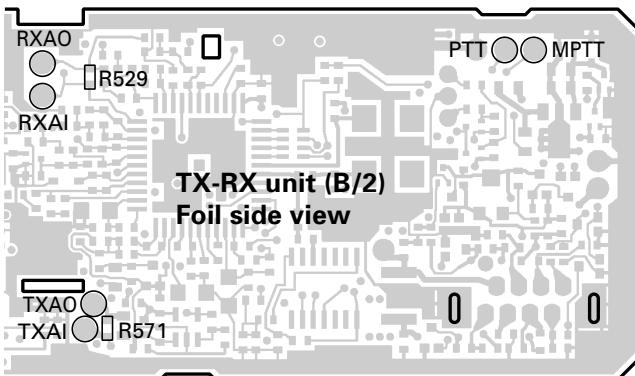

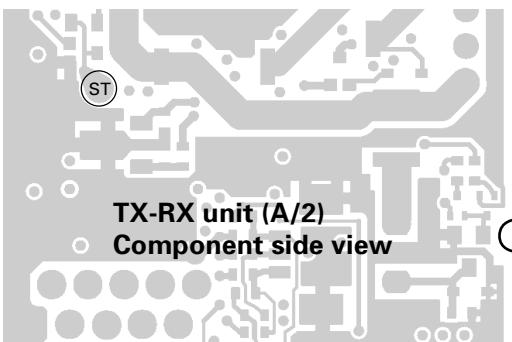

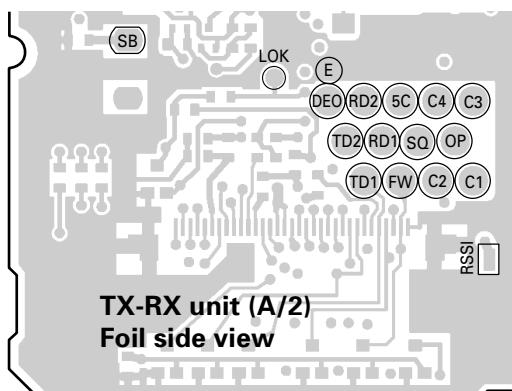

Fig. 4

**4. Ignition Sense Cable (KCT-18 : Option)**

The KCT-18 is an optional cable for enabling the ignition function. The ignition function lets you turn the power to the transceiver on and off with the car ignition key.

If you use the Horn Alert function or the Manual Relay function, you can turn the function off while driving with the ignition key.

**4-1. Connecting the KCT-18 to the Transceiver**

1. Install the KCT-19 in the transceiver. (See the KCT-19 section.)
2. Insert the KCT-18 lead terminal (②) into pin 3 of the square plug (①) supplied with the KCT-19, then insert the square plug into the KCT-19 connector (③).

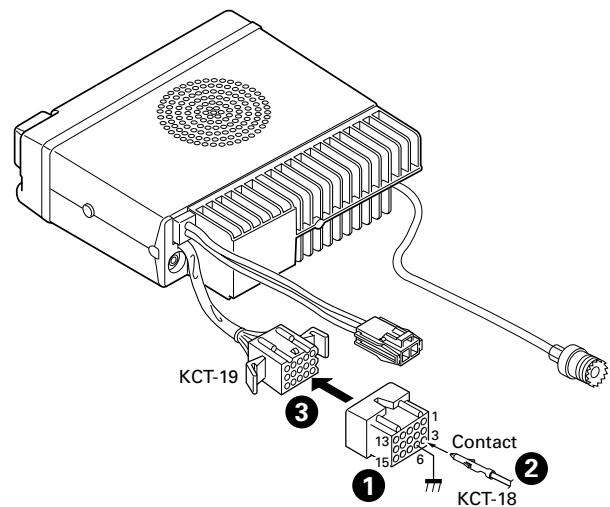

Fig. 5

**4-2. Modifying the Transceiver**

Modify the transceiver as follows to turn the power or the Horn Alert or Manual Relay function on and off with the ignition key.

1. Remove the lower half of the transceiver case.
2. Set jumper resistors ( $0\Omega$ ) R151 and R152 of the TX-RX unit (A/2) as shown in Table 1.

Operation when KCT-18 is connected	R151	R152
KCT-18 cannot be connected	Enable	Enable
Power on/off and Horn Alert or AUX-A on/off	Disable	Enable
Horn Alert or AUX-A on/off, Timed power off	Enable	Disable
Power cannot be turned on	Disable	Disable

Table 1 R151 and R152 setup chart

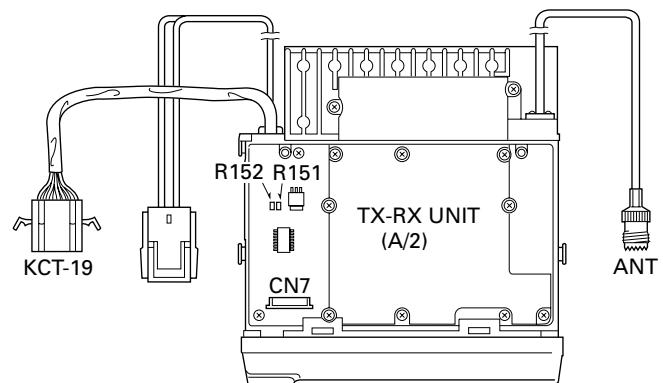

Fig. 6

## INSTALLATION

**5. Interface Cable (KCT-31 : Option)**

The KCT-31 is a RS-232C interface cable for LMR mobile radio, TK-885.

The 9-pin (D-sub) connector is connected to an external RS-232C terminal. The other end of the cable is connected to the internal connector of LMR mobile radio.

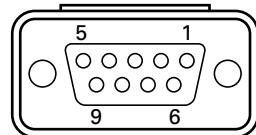

Note : You cannot write a firmware with the KCT-31.

**5-1. Features**

- This KCT-31 has a RS-232C-TTL level interface circuit.
- This KCT-31 does not require an external power supply.
- This KCT-31 can be used up to 9600 bps.
- Compatible with an ER terminal of DTE that has the voltage 6V or more.

**5-2. Terminal function (D-sub connector)**

Pin No.	I/O	Port name	Function
1	I	CD	Carrier detect
2	I	RD	Receive data
3	O	SD	Transmit data
4	O	ER	Data terminal ready
5	-	SG	Signal ground
6	I	DR	Data set ready
7	O	RS	Request to send
8	I	CS	Clear to send
9	-	CI	Ring indicator

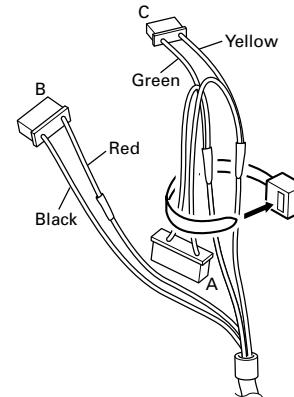

**5-3. Installing the KCT-31 in the transceiver****Note :**

When the COM1 is used, A connector is unused.

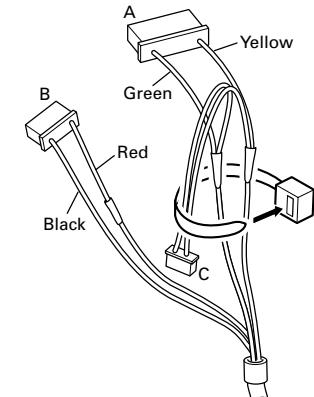

When the COM2 is used, C connector is unused.

- Bind the unused connector to the cable with a retaining band as shown.

When the COM1 is used.

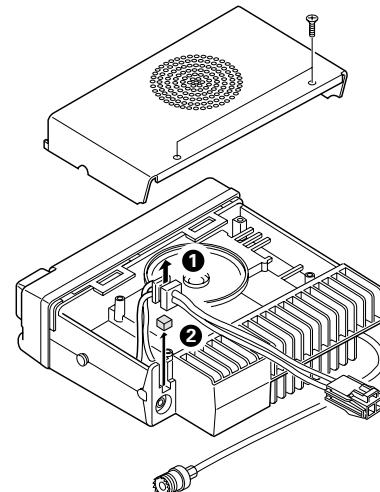

When the COM2 is used.

	A	B	C
COM1	No	Yes	Yes
COM2	Yes	Yes	No

**Fig. 7**

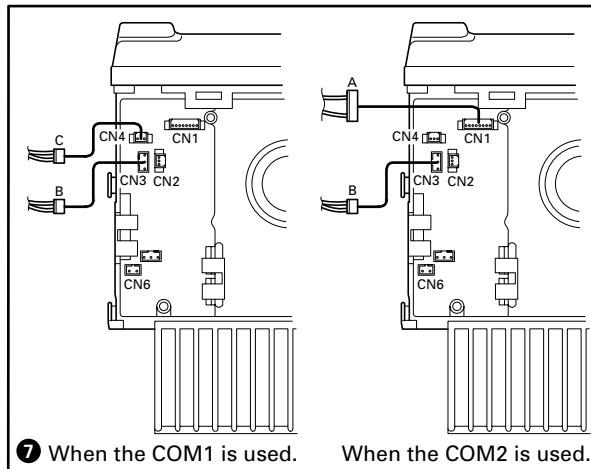

2. Make sure the unit's power is turned off.
3. Remove the upper case of the transceiver and lift the DC cable bushing (①) from the chassis.
4. Remove the pad as shown in Figure 8 (②).

**Fig. 8**

# INSTALLATION

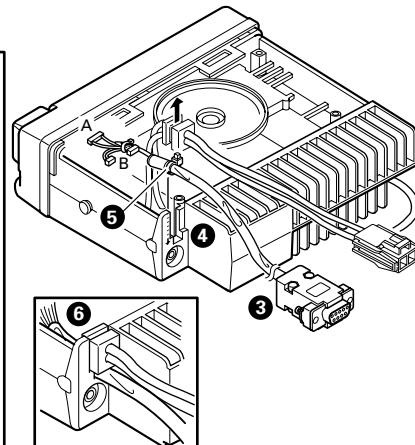

5. Insert the KCT-31 cable (③) into the chassis (④).  
The write retaining band (⑤) must be inside the chassis.
6. Replace the DC cable bushing (⑥).
7. Connect the KCT-31 to the TX-RX unit (A/2) as shown in Figure 9 (⑦).
8. Replace the upper case.

## Note :

Enable the serial port function on the terminal.

Refer to the service manual of each radio or the help file that came with the FPU (Field Programming Unit) for details.

**Fig. 9**

## 6. Optional Voice Scrambler Function

You can use the voice scrambler in the following two configurations.

1. Assign this function to the Scrambler key by using the programming software (KPG-62D).  
When the Scrambler key is pressed, the [ ] indicator appears, and the optional (scrambler) function is enabled. When the key is pressed again, the [ ] indicator goes off and the function is disabled.
2. Using the KPG-62D, you can set the voice scrambler to be always active, without pressing a key. The operator cannot switch off the voice scrambler.

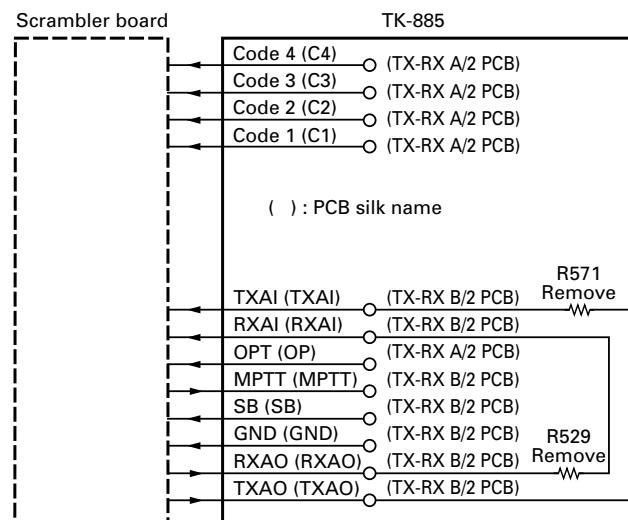

### 6-1. Configuring a Scrambler Code

The scrambler code cannot be changed using the transceiver keys. Only one scrambler code can be set into the transceiver. If you want to change the code, you must use the KPG-62D to reconfigure the scrambler code.

### 6-2. Voice Scrambler Board Connection

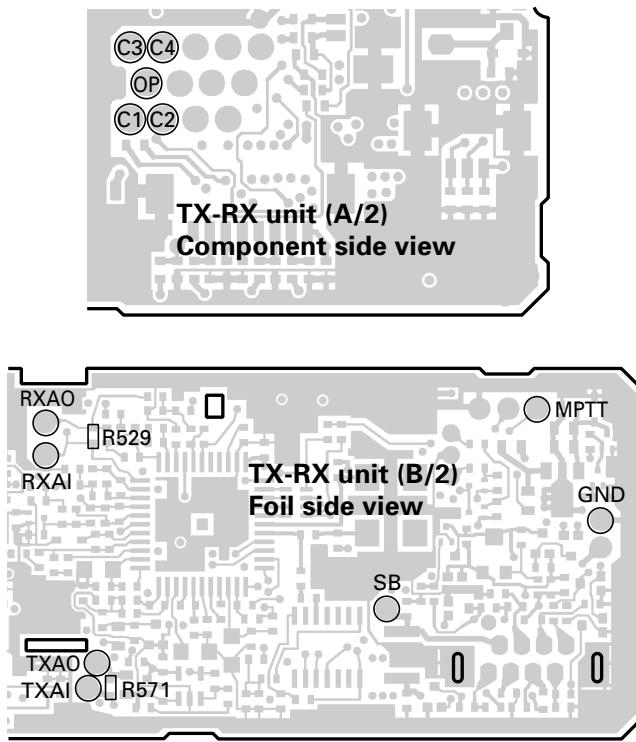

#### • Modification

1. Remove the upper half of the case of the TK-885.
2. Remove R529 and R571 on the TX-RX unit (X57-645 B/2).

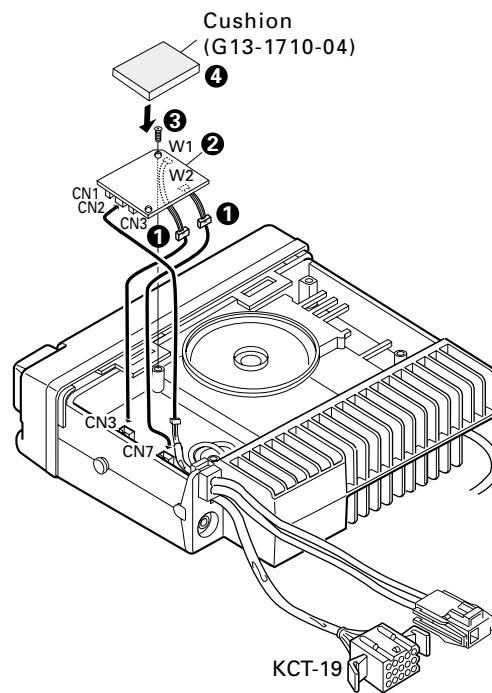

**Fig. 10**

## INSTALLATION

**Fig. 11**

**Fig. 12**

### 7. PA/HA Unit (KAP-1 : Option)

#### 7-1. Installing the KAP-1 in the Transceiver

The Horn Alert (max. 2A drive) and Public Address functions are enabled by inserting the KAP-1 W1 (3P; white/black/red) into CN3 on the TX-RX unit (A/2), inserting W2 (3P; green) into CN5 on the TX-RX unit (A/2), and connecting the KCT-19 (option) to CN2 and CN3 of the KAP-1.

##### • Installation procedure

1. Open the upper case of the transceiver.
2. Insert the two cables (①) with connectors from the KAP-1 switch unit into the connectors on the transceiver.
3. Secure the switch unit board to the chassis with a screw (③). The notch (②) in the board must be placed at the front left side.
4. Attach the cushion on the top of the KAP-1 switch unit.

#### 7-2. Modifying the Transceiver

##### • Horn alert

The signal from pin 4 of IC7 on the TX-RX unit (A/2) turns Q4 and Q6 on and off and drives KAP-1 HA relay to drive the horn with a maximum of 2A.

The default output is HR1. The relay open output can be obtained between HR1 and HR2 by removing R1 in the KAP-1.

	R1	Output form
HR1 (Default)	Enable	
HR2	Disable	

## INSTALLATION

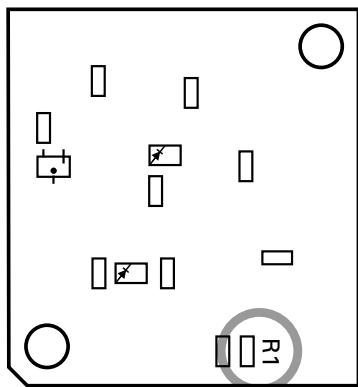

Fig. 13 KAP-1 foil side view

## • Public address

The signal from pin 13 of IC7 on the TX-RX unit (A/2) drives PA relay in the KAP-1 and switches the audio power amplifier output between the external PA system (through KCT-19) and internal and external speakers.

To use the PA function, R109 on the TX-RX unit (A/2) must be removed.

	R109
Use the PA function	No

## 8. Fitting the Control Panel Upside Down

The TK-885 control panel can be fitted upside down, so the transceiver can be mounted with its internal speaker (in the upper half of the case) facing down in your car.

1. Remove the control panel and the TX-RX unit (B/2) control section. (Fig. 15)

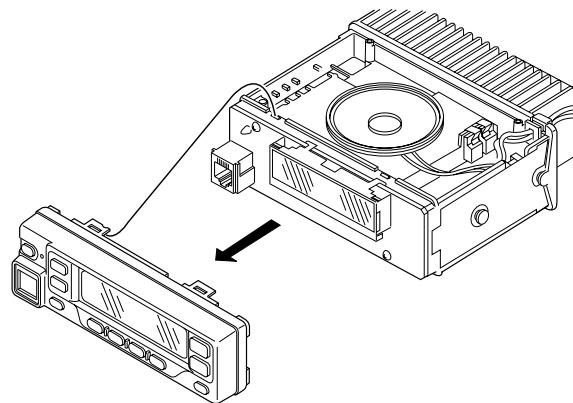

Fig. 15

2. Fold the flat cable (①) in the opposite direction (②).
3. Rotate the control section (③) 180 degrees (④).
4. Insert the flat cable into the control section connector, CN502 (⑤).
5. Mount the control section on the transceiver (⑥).

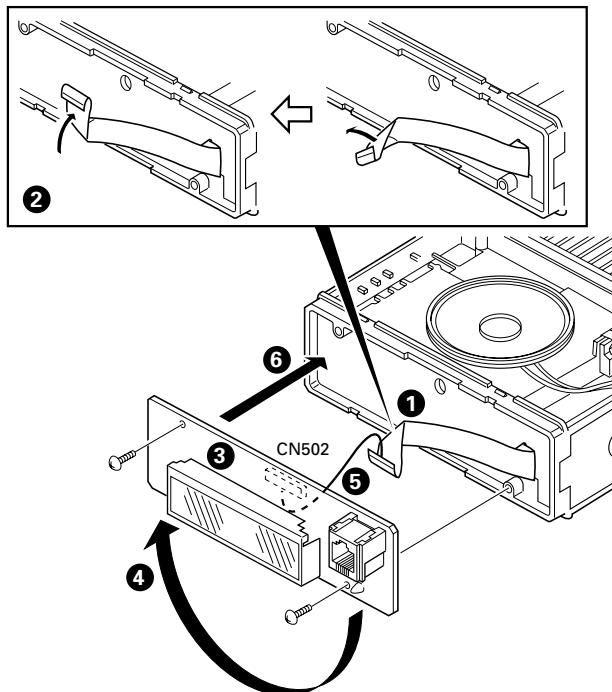

Fig. 16

# TK-885

## INSTALLATION

6. Rotate the control panel 180 degrees and mount it on the transceiver. Refit the two halves of the case to complete installation. (Fig. 17)

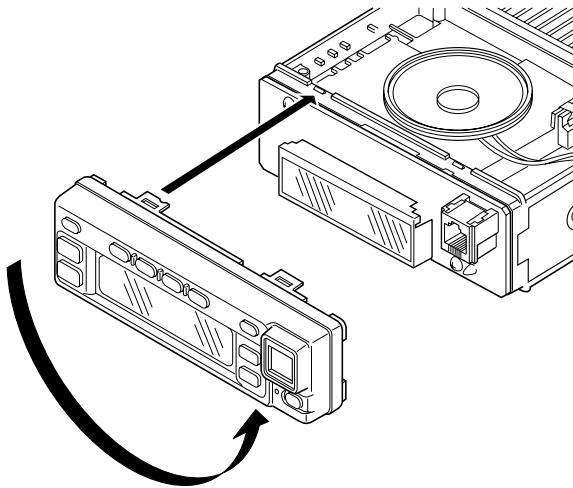

Fig. 17

## 9. External Speaker

### 9-1. KES-3 : Option

The KES-3 is an external speaker for the 3.5-mm-diameter speaker jack.

#### • Connection procedure

1. Connect the KES-3 to the 3.5-mm-diameter speaker jack on the rear of the transceiver.

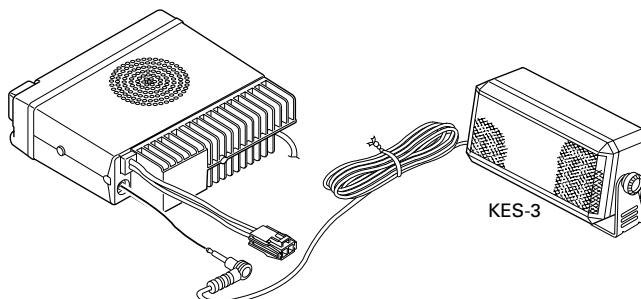

Fig. 18

### 9-2. KES-4 : Option

The KES-4 is an external speaker used with the accessory connection cable.

#### • Connection procedure

1. Install the KCT-19 in the transceiver. (See the KCT-19 section.)
2. Insert the crimp terminal into the square plug supplied with the KCT-19.
3. Connect CN5 of the transceiver to connector C of the KCT-19 instead of to the internal speaker connector.

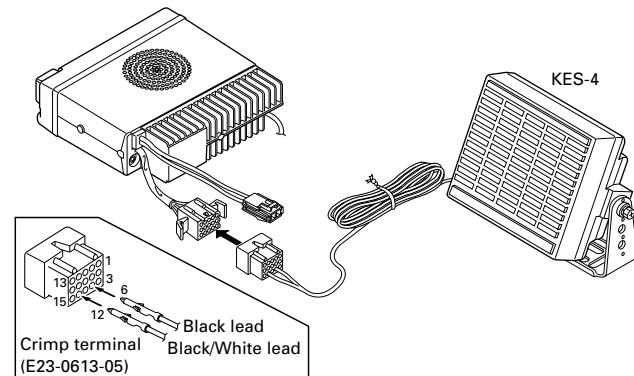

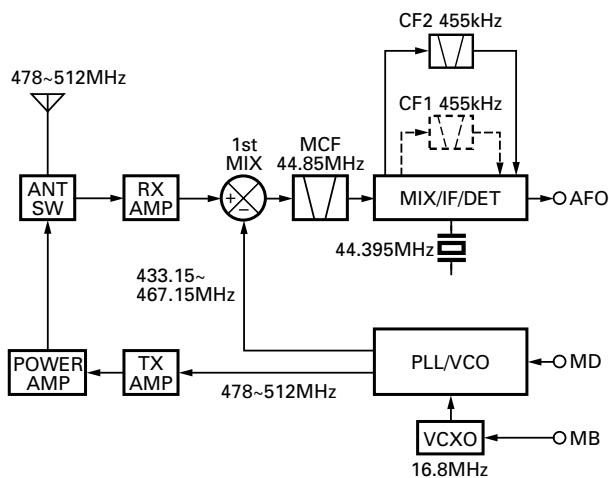

Fig. 19

# CIRCUIT DESCRIPTION

## Frequency Configuration

The TX-RX unit (A/2) incorporates a VCO, based on a fractional N type PLL synthesizer system, that allows a channel step of 6.25 and 12.5kHz to be selected. The incoming signal from the antenna is mixed with a first local oscillation frequency to produce a first intermediate frequency of 44.85MHz.

The signal is then mixed with a second local oscillation frequency of 44.395MHz to produce a second intermediate frequency of 455kHz. This is called a double-conversion system. The TX-RX unit (A/2) contains a wide/narrow CFs. The transmit signal is produced by the PLL circuit for direction oscillation and division. The signal output from the VCO is amplified by a straight amplifier and transmitted.

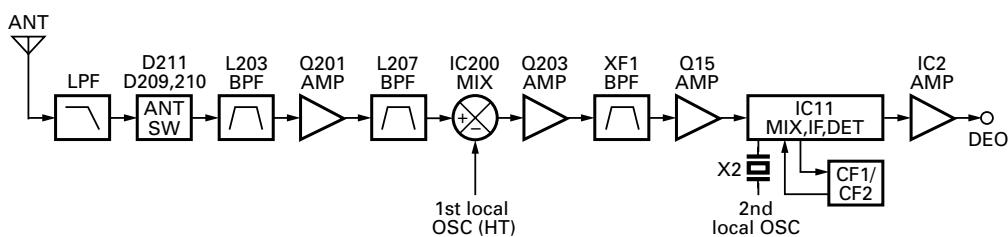

**Fig. 1 Frequency configuration**

## Receiver System

### ■ Outline

The incoming signal from the antenna passes through a low-pass filter and a transmission/reception selection diode switch (D209) and goes to the front end of the receiver. The front-end filter is a variable BPF consisting of two two-pole helical resonators and eight varicap diodes (D203, D204, D205, D206, D212, D213, D214, D215) to eliminate unwanted out-of-band signal components. The low-noise amplifier (LNA) (Q201) uses a bipolar transistor to achieve wide-band and low-distortion amplification.

**Fig. 2 Receiver system**

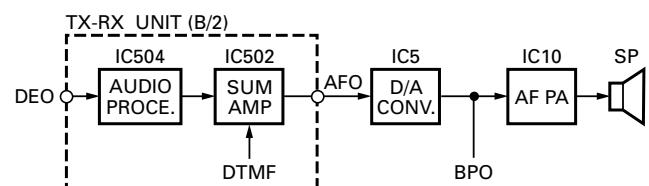

The signal passes through a BPF and is down-converted with the first local signal by IC200, then converted to the first IF signal of 44.85MHz. The first local signal passes through an LPF and an attenuator to eliminate unwanted harmonics components and implement the optimum input level to the mixer, then enters IC200. A DBM is used as a mixer to achieve a high potential.

The signal output from the mixer is amplified by an intermediate frequency amplifier and input to two MCFs (XF1). The signal is amplified by another intermediate amplifier and goes to the FM IF IC (IC11). The first intermediate frequency signal is mixed with the second local signal of 44.395MHz to produce the second IF signal of 455kHz.

The unwanted near-by signal components are then eliminated by a ceramic filter (CF2) and the resulting signal goes back to the FM IF IC. The signal is quadrature-detected in the IC to produce an audio signal, which is amplified by a DET amplifier (IC2) and output to the TX-RX unit (B/2).

### ■ AF Signal System

The detection signal (DEO) from the TX-RX unit (A/2) goes to the audio processor (IC504) of the TX-RX unit (B/2). The signal passes through a filter in the audio processor to adjust the gain, and is output to IC502. IC502 sums the AF signal and the DTMF signal and returns the resulting signal to the TX-RX unit (A/2). The signal (AFO) sent to the TX-RX unit (A/2) is input to the D/A converter (IC5). The AFO output level is adjusted by the D/A converter. The signal output from the D/A converter is added with the BEEP signal (BPO) and the resulting signal is input to the audio power amplifier (IC10). The AF signal from IC10 switches between the internal speaker and speaker jack (J1) output.

**Fig. 3 AF signal system**

## CIRCUIT DESCRIPTION

### Squelch Circuit

The detection output from the FM IF IC (IC11) is amplified by IC2 and the signal (DEO) is sent to the TX-RX unit (B/2). The signal passes through a high-pass filter and a noise amplifier (Q503) in the TX-RX unit (B/2) to detect noise. A voltage is applied to the CPU (IC511). The CPU controls squelch according to the voltage (ASQ) level. The signal from the RSSI pin of IC11 is monitored. The electric field strength of the receive signal can be known before the ASQ voltage is input to the CPU, and the scan stop speed is improved.

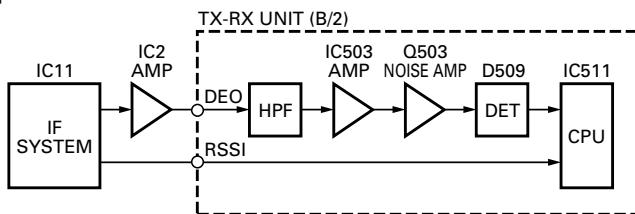

Fig. 4 Squelch circuit

## Transmitter System

### Outline

The transmitter circuit produces and amplifies the desired frequency directly. It FM-modulates the carrier signal by means of a varicap diode.

### VCO/PLL Circuit

The TK-885 has a VCO for the transmitter and a VCO for the receiver in a sub-unit (A1). They are housed in a solid shielded case and connected to the TX-RX unit (A/2) through CN101. One of the VCOs is selected with an ST signal. A filtered low-noise power supply is used for the VCOs and varicap diodes.

The VCO for the transmitter is described below. It is designed so that Q103 turns on with a prescribed frequency when a reverse bias is applied to D102 and D104 by using the control voltage (CV) through CN101. The control voltage is changed by turning the trimmer capacitor (TC109). The output from Q103 is applied to the buffer amplifier (Q106) to generate a VCO output signal. This signal is used as a drive input signal or a local signal of the first mixer.

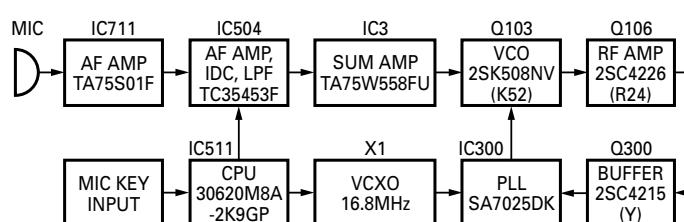

Fig. 5 Transmitter system

Since a signal output from Q106 is input to the PLL IC, it passes through CN101 and buffer amplifier (Q300) and goes to the PLL IC (IC300). The modulation signal from CN101 is applied to D105 and passes through C113 to modulate the carrier.

The PLL IC uses a fractional N type synthesizer to improve the C/N ratio and lock-up speed. The VCO output signal input to the pin 5 of the PLL IC is divided to produce a comparison frequency according to a channel step. This signal is compared with the reference frequency which is output from the VCXO (X1). VCXO provides 16.8MHz, 2.5ppm (-30 to +60°C) and guarantees stable performance when the temperature changes. The output signal from the phase comparator passes through a charge pump in the PLL IC and an external active LPF (Q301, Q302) to generate a DC VCO control voltage CV. Serial data (DT, CK, EP) are output from the CPU (IC511) and shift register (IC8) in the TX-RX unit (B/2) to control the PLL IC. The PLL lock status is always monitored by the CPU.

### Unlock Circuit

During reception, the T/R signal goes high, the KEY signal goes low, and Q10 turns on. Q11 turns on and a voltage is applied to the collector (8R). During transmission, the T/R signal goes low, the KEY signal goes high and Q13 turns on. Q12 turns on and a voltage is applied to 8T.

The CPU in the TX-RX unit (B/2) monitors the PLL (IC300) LD signal directly. The CPU detects this signal and makes the KEY signal low. When the KEY signal goes low, no voltage is applied to 8T, and no signal is transmitted.

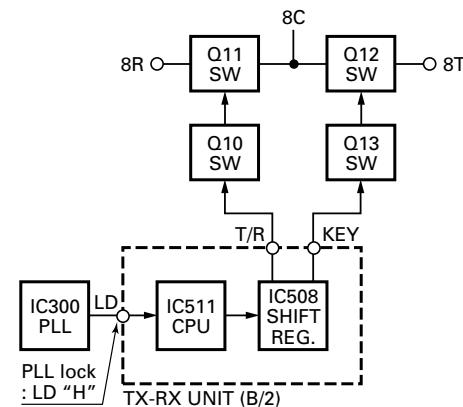

Fig. 6 Unlock circuit

# CIRCUIT DESCRIPTION

## ■ Power Amplifier Circuit

The transmit output signal from the VCO is amplified to a specified level of the power module (IC400) by the drive block (Q202, Q204, Q205). The amplified signal passes through the transmission/reception selection diode (D209) and goes to a low-pass filter. The low-pass filter removes unwanted high-frequency harmonic components, and the resulting signal is goes the antenna terminal.

## ■ APC Circuit

The automatic transmission power control (APC) circuit detects part of a power module output with a diode (D27, D30) and applies a voltage to Q21. Q21 compares the APC control voltage (PC) generated by the D/A converter (IC5) and DC amplifier (IC6) with the detection output voltage to control Q19 and Q20, generates DB voltage from B voltage, and stabilizes transmission output.

Q17 turns the PC signal on or off using 8T so that the circuit works only during transmission. With stability at low power in mind, Q29 turns off to optimize the detection voltage.

The APC circuit is configured to protect overcurrent of the power module due to fluctuations of the load at the antenna end and to stabilize transmission output at voltage and temperature variations.

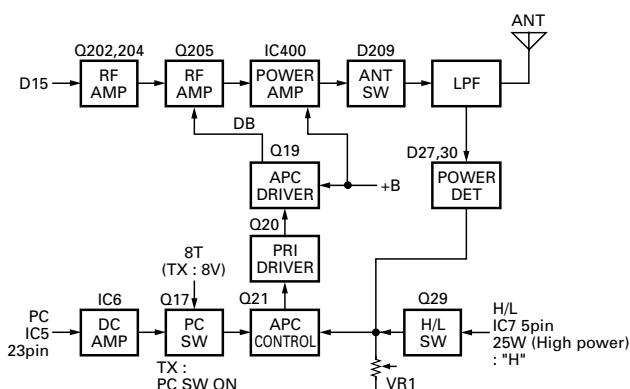

Fig. 7 APC circuit

## Control Circuit

The CPU carries out the following tasks:

- 1) Controls the shift register (IC7, IC8, IC508) AF MUTE, T/R KEY outputs.
- 2) Adjusts the AF signal level of the audio processor (IC504) and turns the filter select compounding on or off.
- 3) Controls the DTMF decoder (IC507).
- 4) Controls the LCD assembly display data.
- 5) Controls the PLL (IC300).
- 6) Controls the D/A converter (IC5) and adjusts the volume, modulation and transmission power.

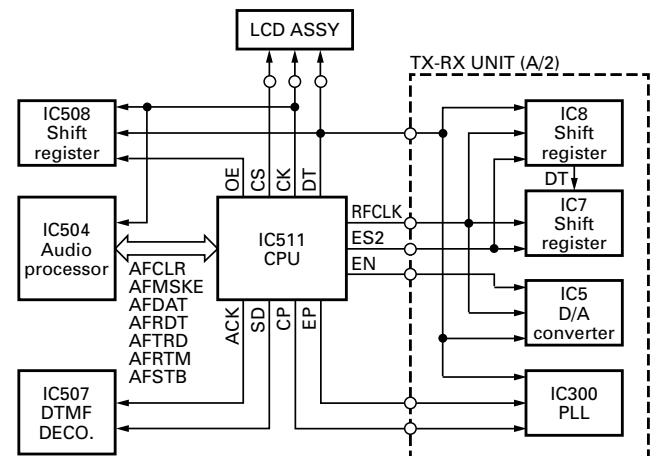

Fig. 8 Control circuit

## ■ Memory Circuit

Memory circuit consists of the CPU (IC511) and a flash memory (IC510). A flash memory has a capacity of 2M bits (256k x 8) and contains the transceiver control program for the CPU and the data for operating features.

This program can be easily downloaded from an external device. The CPU (IC511) controls the flash memory through an external address bus and an external data bus. The CPU controls the EEPROM (IC512) through two serial data lines.

### • Flash Memory

Note: The flash memory stores the data containing the FPU (KPG-62D) program, Security Number (MPT Serial Number), and firmware program (User mode, Test mode, Tuning mode, etc.).

This data must be reinstalled when replacing the flash memory.

### • EEPROM

Note: The EEPROM stores tuning data (Deviation, Squelch, etc.).

Realign the transceiver after replacing the EEPROM.

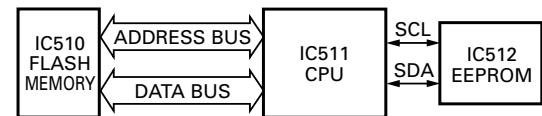

Fig. 9 Memory circuit

## CIRCUIT DESCRIPTION

### ■ Display Circuit

The CPU (IC511) controls the shift register (IC508) and display LEDs. When the LG line goes high when the transceiver is busy, Q508 turns on and the green LED on D511 lights. In transmit mode, the LR line goes high, Q509 turns on and the red light lights. Backlighting LEDs for the key operation unit (D512~D517) and LCD are provided.

When the KBLC line goes high, Q512 turns on, then Q513 turns on, and the key illumination LED lights. A voltage is applied to the LEDA line to turn on the LCD backlight.

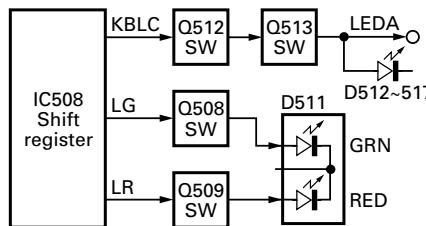

Fig. 10 Display circuit

### ■ Encode

The QT, DQT signals are output from LSDO of the CPU (IC511) and go to the D/A converter (IC5) of the TX-RX unit (A/2). The DTMF and single tone signals are output from HSDO of the CPU and goes to the audio processor (IC504). An MSK signal is output from the audio processor according to the data (AFDAT) from the CPU. The signal is summed with a MIC/MSK signal by the audio processor (IC504), and the resulting signal passes through an analog switch (IC506) and goes to the TX-RX unit (A/2) (MO).

MO is summed with the external pin DI line by the summing amplifier (IC3) and the resulting signal goes to the DA converter (IC5). The D/A converter (IC5) adjusts the MO level and the balance between the MO and TO levels. Part of a TO signal is summed with an output signal from pin 3 (MO) of IC5 and the resulting signal goes to the MD pin of the VCO. This signal is applied to a varicap diode in the VCO for direct FM modulation.

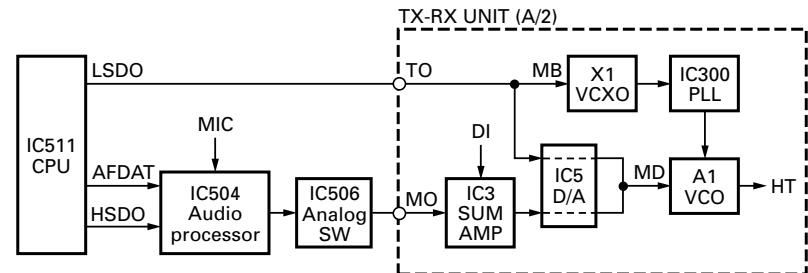

Fig. 12 Encode

### ■ Key Matrix Circuit

The TK-885 front panel has ten keys. Each of them is connected to a cross point of a matrix of the KEY1 to KEY7 ports of the microprocessor. The KEY5 to KEY7 ports are always high, while the KEY1 to KEY4 ports are always low.

The microprocessor monitors the status of the KEY1 to KEY7 ports. If the state of one of the ports changes, the microprocessor assumes that the key at the matrix point corresponding to that port has been pressed. Unused points (KEY1 to KEY7) are also used for foot switch (FSW) input.

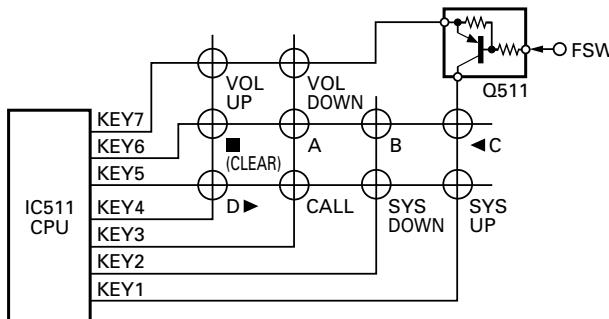

Fig. 11 Key matrix circuit

### ■ Decode

The signal (DEO) detected by the TX-RX unit (A/2) passes through two low-pass filters of IC501, goes to LSDI of the CPU (IC511) to decode QT, DQT.

The MSK signal passes through IC504. IC504, includes band-pass filter and MSK decoder, converts the input signal into a square waveform (0 and 5V). This square waveform is then fed to AFRDT line of CPU (IC511).

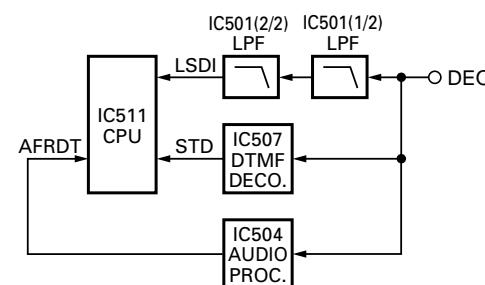

Fig. 13 Decode

## CIRCUIT DESCRIPTION

## ■ D/A Converter

The D/A converter (IC5) is used to adjust TONE and MO modulation, beep, AF volume, TV voltage, FC reference voltage, and PC POWER CONTROL voltage level.

Adjustment values are sent from the CPU as serial data. The D/A converter has a resolution of 256 and the following relationship is valid:

$$\text{D/A output} = (\text{Vin} - \text{VDAref}) / 256 \times n + \text{VDAref}$$

Vin: Analog input

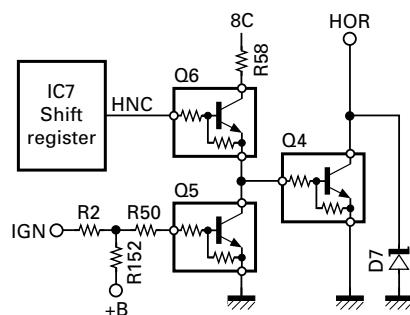

VDAref: D/A reference voltage

n: Serial data value from the microprocessor (CPU)

## ■ Horn Control

The horn switch, consisting of Q4, Q5, and Q6, controls the horn relay. It is supplied by the dealer to provide the external horn alert function.

Q5 disables horn alert, turning on when its base is high, to inhibit the function. Normally, the output from IC7 is low, and Q6 is off; the base of Q4 is about 0V and Q4 is off. When horn alert is enabled, the output from IC7 goes high and Q6 turns on. The base current flows through R58 to Q4 to turn Q4 on. Q4 can sink a maximum of 100mA. If the operational KAP-1 is used, it can drive up to 2A.

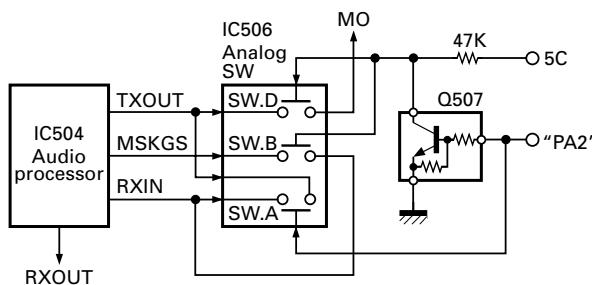

**Fig. 14** Horn control

## ■ PA Switch

If the optional KAP-1 is used, the PA (Public Address) function becomes available. In this case, the signal flow changes as follows;

"PA2"	Q507	SW.A	SW.B	SW.D	Public address
L	L	L	H	H	OFF
H	H	H	L	L	ON

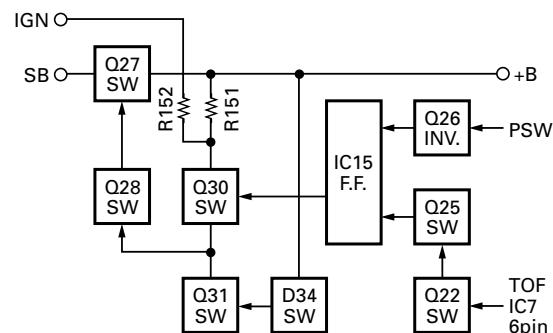

**Fig. 15 PA switch**

## Power Supply Circuit

When the POWER switch on the TX-RX unit (B/2) is pressed, the PSW signal goes low. This signal is inverted by Q26 and sent to a flip-flop IC (IC15). This IC outputs a control signal when the PSW goes low. When the power turns on, pin 1 of IC15 outputs a low signal and Q30 turns on. The base of Q28 goes high, Q28 turns on, SB SW (Q27) turns on and power (SB) is supplied to the set.

This circuit has an over-voltage protection circuit. If a DC voltage of 20V or higher is applied to the power cable, D34 turns on and a voltage is applied to the base of Q31. This voltage turns Q31 on and turns Q28 and SBSW off. This circuit has a TIMED POWER OFF (TOF) function which can be programmed by software.

It is controlled through pin 6 of IC7. When the TOF line goes high, Q22 turns on and then Q25 turns on. Pin 6 of IC15 goes high, then pin 1 goes high to turn Q27 off.

**Fig. 16 Power supply circuit**

## SEMICONDUCTOR DATA

Q512,513	Key backlight switch	Active while KBLC is "H"
Q515	Keybacklight switch	
D501	Surge absorption	BLC
D502	Over current protection	PSB
D503	Surge absorption	CM
D504	Surge absorption	PTT/TXD
D505	Surge absorption	HOOK/RXD
D507	MIC mute	MM/MM1
D508	Limiter	MIC
D509	Limiter	ASQ
D510	Reverse current protection	C575 charge
D511	BUSY/TX LED	Lights green while busy, red while TX
D512~517	Key backlight	Active while KBLC is "H"
D518	Current regulation	Key backlight
D520	Discharge	Speed up

## VCO Unit (X58-4550-31)

Ref. No.	Use / Function	Operation / Condition
Q101	Oscillator	RX
Q102	Inverter	Active while ST is "H", active while TX
Q103	Oscillator	TX
Q104	TX/RX switch	Active while ST is "H", active while TX
Q105	TX/RX switch	Active while Q102 is off
Q106	Buffer amp	
D101	RX VCO	
D102	TX VCO	
D103	RX VCO	
D104	TX VCO	
D105	Modulation	

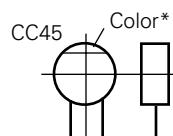

# PARTS LIST

## CAPACITORS

CC	45	TH	1H	220	J
1	2	3	4	5	6

1 = Type ... ceramic, electrolytic, etc.  
2 = Shape ... round, square, ect.  
3 = Temp. coefficient

4 = Voltage rating  
5 = Value  
6 = Tolerance

### • Capacitor value

010 = 1pF  
100 = 10pF  
101 = 100pF  
102 = 1000pF = 0.001μF  
103 = 0.01μF

2 2 0 = 22pF  
Multiplier  
2nd number  
1st number

### • Temperature coefficient

1st Word	C	L	P	R	S	T	U
Color*	Black	Red	Orange	Yellow	Green	Blue	Violet
ppm/°C	0	-80	-150	-220	-330	-470	-750

2nd Word	G	H	J	K	L
ppm/°C	±30	±60	±120	±250	±500

Example : CC45TH = -470 ± 60 ppm/°C

### • Tolerance (More than 10pF)

Code	C	D	G	J	K	M	X	Z	P	No code		
(%)	±0.25	±0.5	±2	±5	±10	±20	+40	+80	+100	More than 10μF -10 ~ +50		
							-20	-20	-0	Less than	4.7μF	-10 ~ +75

### (Less than 10pF)

Code	B	C	D	F	G
(pF)	±0.1	±0.25	±0.5	±1	±2

### • Voltage rating

1st word \ 2nd word	A	B	C	D	E	F	G	H	J	K	V
0	1.0	1.25	1.6	2.0	2.5	3.15	4.0	5.0	6.3	8.0	-
1	10	12.5	16	20	25	31.5	40	50	63	80	35
2	100	125	160	200	250	315	400	500	630	800	-
3	1000	1250	1600	2000	2500	3150	4000	5000	6300	8000	-

### • Chip capacitors

(EX) C C 7 3 F S L 1 H 0 0 0 J  
 1 2 3 4 5 6 7 Refer to the table above.

(Chip) (CH, RH, UJ, SL)

1 = Type

2 = Shape

3 = Dimension

4 = Temp. coefficient

5 = Voltage rating

6 = Value

7 = Tolerance

(EX) C K 7 3 F F 1 H 0 0 0 Z  
 1 2 3 4 5 6 7

(Chip) (B, F)

### Dimension (Chip capacitors)

Dimension code	L	W	T
Empty	5.6 ± 0.5	5.0 ± 0.5	Less than 2.0
A	4.5 ± 0.5	3.2 ± 0.4	Less than 2.0
B	4.5 ± 0.5	2.0 ± 0.3	Less than 2.0
C	4.5 ± 0.5	1.25 ± 0.2	Less than 1.25
D	3.2 ± 0.4	2.5 ± 0.3	Less than 1.5
E	3.2 ± 0.2	1.6 ± 0.2	Less than 1.25
F	2.0 ± 0.3	1.25 ± 0.2	Less than 1.25
G	1.6 ± 0.2	0.8 ± 0.2	Less than 1.0
H	1.0 ± 0.05	0.5 ± 0.05	0.5 ± 0.05

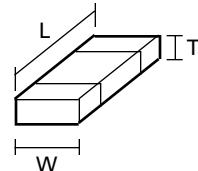

## RESISTORS

### • Chip resistor (Carbon)

(EX) R D 7 3 E B 2 B 0 0 0 J  
 1 2 3 4 5 6 7

(Chip) (B, F)

### Dimension

### • Carbon resistor (Normal type)

(EX) R D 1 4 B B 2 C 0 0 0 J  
 1 2 3 4 5 6 7

1 = Type ... ceramic, electrolytic, etc.

5 = Voltage rating

2 = Shape ... round, square, ect.

6 = Value

3 = Dimension

7 = Tolerance

4 = Temp. coefficient

### Dimension (Chip resistor)

Dimension code	L	W	T
E	3.2 ± 0.2	1.6 ± 0.2	1.0
F	2.0 ± 0.3	1.25 ± 0.2	1.0
G	1.6 ± 0.2	0.8 ± 0.2	0.5 ± 0.1
H	1.0 ± 0.05	0.5 ± 0.05	0.35 ± 0.05

### Rating wattage

Code	Wattage	Code	Wattage	Code	Wattage
1J	1/16W	2C	1/6W	3A	1W
2A	1/10W	2E	1/4W	3D	2W
2B	1/8W	2H	1/2W

## EXPLODED VIEW

## PACKING

Parts with the exploded numbers larger than 700 are not supplied.

## ADJUSTMENT

**Test Mode****■ Test Mode Operating Features**

This transceiver has a test mode. **To enter test mode, press [B] key and turn power on. Hold [B] key until test channel No. and test signalling No. appears on LCD.**

Test mode can be inhibited by programming. To exit test mode, switch the power on again. The following functions are available in test mode.

**• Controls ("FCN" appears)**

[PTT]	Used when making a transmission.
[■]	Function off.
[A]	FFSK 1200 bps and 2400 bps.
[B]	Shift off.
[◀ C]	Comander function on and off.
[D▶]	Beat shift on and off.
[CALL]	Monitor on and off.
[System Up/Down]	Shift off.
[Volume Up/Down]	Volume up/down.

**• Controls ("FCN" not appears)**

[PTT]	Used when making a transmission.
[■]	Function off.
[A]	Sets to the tuning mode.
[B]	Shift on.
[◀ C]	RF power high and low.
[D▶]	Changes signalling.
[CALL]	Monitor on and off.
[System Up/Down]	Changes channel.
[Volume Up/Down]	Volume up/down.

**Note :** If a [A], [B], [◀ C], [D▶] key is pressed during transmission, the DTMF corresponding to the key that was pressed is sent.

**• LCD indicator**

"SCN"	Unused
"J"	Lights at compander on.
"AUX"	Unused.
"P"	Lights at RF power low.
"MON"	Lights at monitor on.
"SVC"	Unlock.
"■"	Lights at FFSK 2400 bps.

**• LED indicator**

Red LED	Lights during transmission.
Green LED	Lights when there is a carrier.

**• Sub LCD indicator**

"FCN"	Appears at shift on.
-------	----------------------

**■ Frequency and Signalling**

The set has been adjusted for the frequencies shown in the following table. When required, re-adjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

**• Frequency (MHz)**

Channel No.	RX	TX
1	495.05000	495.10000
2	478.05000	478.10000
3	511.95000	511.90000
4	490.00000	490.00000
5	490.20000	490.20000
6	490.40000	490.40000
7~16	-	-

**• Signalling**

Signalling No.	RX	TX
1	None	None
2	None	100Hz square
3	QT 67.0Hz	QT 67.0Hz
4	QT 151.4Hz	QT 151.4Hz
5	QT 210.7Hz	QT 210.7Hz
6	QT 250.3Hz	QT 250.3Hz
7	DQT 023N	DQT 023N
8	DQT 754I	DQT 754I
9	None	DTMF tone 9
10	None	Single tone 1200Hz (HSD out)
11	None	Single tone 1200Hz (MODEM out)
12	None	Single tone 1800Hz (MODEM out)
13	None	FFSK (PN pattern)
14	FFSK code	FFSK code

**■ Preparations for Tuning the Transceiver**

Before attempting to tune the transceiver, connect the unit to a suitable power supply.

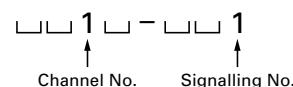

Whenever the transmitter is turned, the unit must be connected to a suitable dummy load (i.e. power meter).

The speaker output connector must be terminated with a  $4\Omega$  dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during tuning.

**■ Transceiver Tuning****(To place transceiver in tuning mode)**

Channel appears on LCD. Set channel according to tuning requirements.

LCD display (Test mode)

# ADJUSTMENT

Press [A], now in tuning mode. Use [ $\blacktriangleleft$  C] button to write tuning data through tuning modes, and [System Up/Down] to adjust tuning requirements (1 to 256 appears on LCD).

Use [D▶] button to select the adjustment item through tuning modes. Use [B] button to adjust 3 or 5-point tuning.

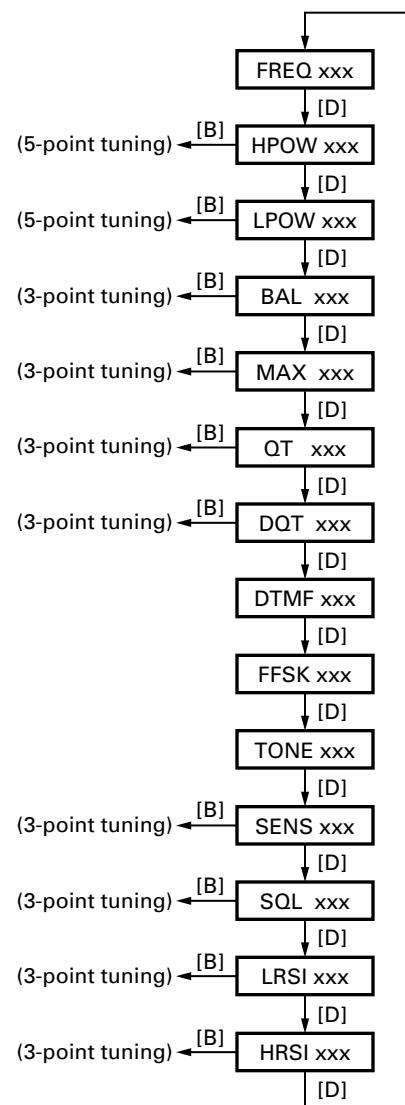

LCD display (Tuning mode)

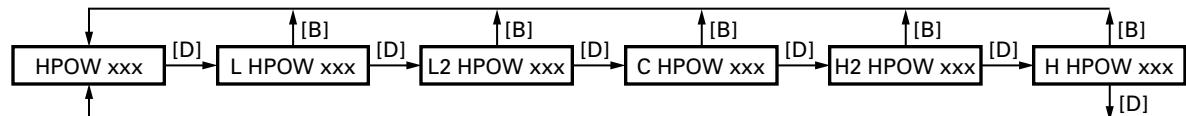

## • Panel Tuning Mode (MHz)

Test channel	RX frequency	TX frequency
L	478.05000	478.10000
L2	486.55000	486.60000
C	495.05000	495.10000
H2	503.55000	503.60000
H	511.95000	511.90000

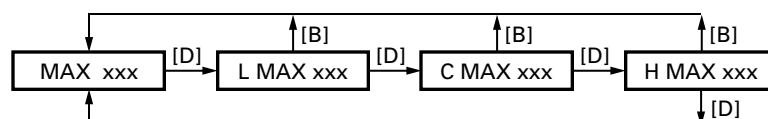

## • Tuning flow

## • 5-point tuning (ex. RF power high)

## • 3-point tuning (ex. Maximum deviation)

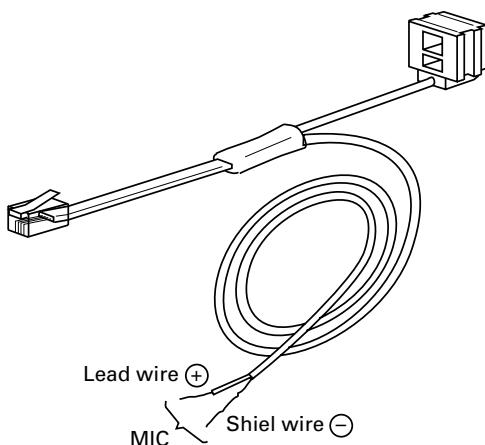

## ADJUSTMENT

## Test Equipment Required for Alignment

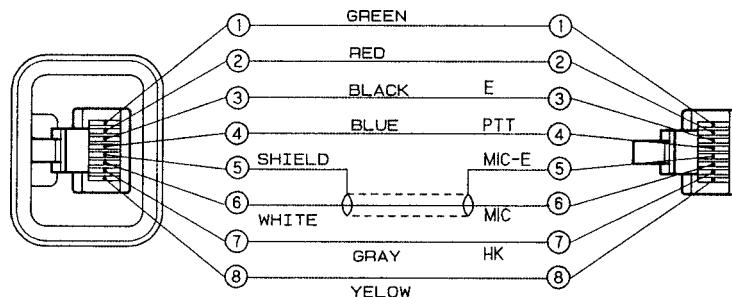

Test Equipment	Major Specifications	
1. Standard Signal Generator (SSG)	Frequency Range Modulation Output	430 to 520MHz Frequency modulation and external modulation -127dBm/0.1μV to greater than -7dBm/100mV
2. Power Meter	Input Impedance Operation Frequency Measurement Capability	50Ω 430 to 520MHz or more Vicinity of 50W
3. Deviation Meter	Frequency Range	430 to 520MHz
4. Digital Volt Meter (DVM)	Measuring Range Accuracy	1 to 20V DC High input impedance for minimum circuit loading
5. Oscilloscope		DC through 30MHz
6. High Sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 1000MHz 0.2ppm or less
7. Ammeter		20A
8. AF Volt Meter (AF VTVM)	Frequency Range Voltage Range	50Hz to 10kHz 1mV to 3V
9. Audio Generator (AG)	Frequency Range Output	20Hz to 20kHz or more 0 to 1V
10. Distortion Meter	Capability Input Level	3% or less at 1kHz 50mV to 10Vrms
11. 4Ω Dummy Load		Approx. 4Ω, 10W
12. Regulated Power Supply		13.6V, approx. 20A (adjustable from 9 to 20V) Useful if ammeter required

## Tuning cable (E30-3383-05)

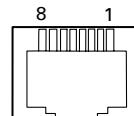

Adapter cable (E30-3383-05) is required for injecting an audio if PC tuning is used.  
See "PC Mode" section for the connection.

## Test cable for microphone input (E30-3360-08)

**MIC connector  
(Front view)**

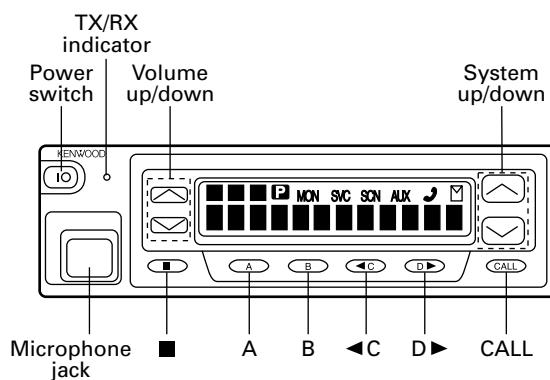

- 1 : BLC
- 2 : PSB
- 3 : E
- 4 : PTT
- 5 : ME
- 6 : MIC
- 7 : HOOK
- 8 : CM

# ADJUSTMENT

## Adjustment Location

### ■ Switch

### ■ Note

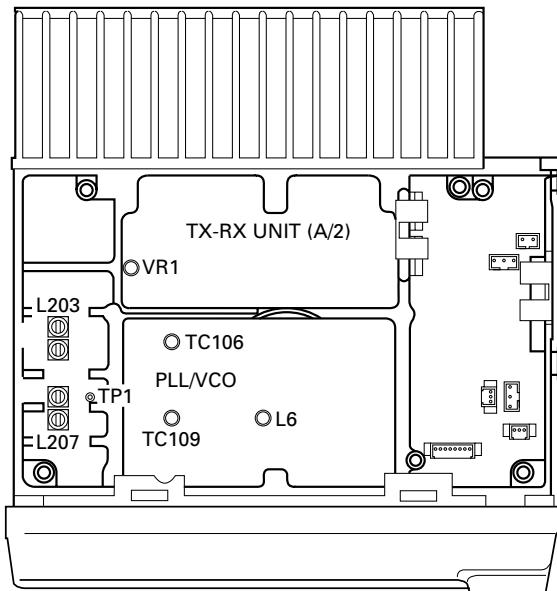

#### • Flash memory

The firmware program (User mode, Test mode, Tuning mode, etc.), the data programmed and security number (MPT serial number) by the FPU (KPG-62D) for the flash memory, is stored in memory. When parts are changed, program the data again.

#### • EEPROM

The tuning data (Deviation, Squelch, etc.) for the EEPROM, is stored in memory. When parts are changed, readjust the transceiver.

### ■ Adjustment Point

### ■ Repair Jig (Chassis)

Use jig (Part No. : A10-4010-02) for repairing the TK-885. The jig facilitates the voltage check when the voltage on the component side TX-RX unit (A/2) is checked during repairs.

## Common Section

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
1. PLL lock voltage	1) Set test mode CH : CH3 - Sig1 PTT : OFF (Receive) PTT : ON (Transmit)	DVM Power meter	TX-RX (A/2)	TP1	PLL	TC106	1.5V (Receive)	$\pm 0.1V$
	2) CH : CH2 - Sig1 PTT : OFF (Receive) PTT : ON (Transmit)					TC109	1.5V (Transmit)	
							Check	8.0V or less

## ADJUSTMENT

## Receiver Section

Item	Condition	Measurement			Adjustment			Specifications/Remarks	
		Test-equipment	Unit	Terminal	Unit	Parts	Method		
1. Discriminator	1) Set test mode CH : CH1 - Sig1 SSG output : -53dBm AF : 1.4V/4Ω	SSG AF VTVM Oscilloscope	Rear panel	ANT ACC (EXT.SP)	TX-RX (A/2)	L6	AF output voltage maximum.		
2. Sensitivity	1) Set test mode Select "SENS" in tuning mode. "L SENS" SSG freq' : 478.050MHz SSG output : -114dBm/0.45μV SSG MOD : 1.5kHz AF output : 1V/4Ω	SSG AF VTVM Distortion meter Oscilloscope AG	ANT ACC (EXT.SP)				Adjust for maximum SINAD.		
	2) "C SENS" SSG freq' : 495.050MHz						"H SENS 240"		
	3) "H SENS 240" SSG freq' : 511.950MHz								
3. Squelch	1) Set test mode Select "L SQL" in tuning mode. SSG freq' : 478.050MHz SSG output : Sensitivity value of 12dB SINAD. SSG MOD : 1.5kHz						Squelch must be closed once. Then adjust for squelch open point.		
	2) "C SQL" SSG freq' : 495.050MHz								
	3) "H SQL" SSG freq' : 511.950MHz								
4. RSSI (Low)	1) Set test mode Select "L LRSI" in tuning mode. SSG freq' : 478.050MHz SSG output : Sensitivity value of 12dB SINAD. SSG MOD : 1.5kHz						Writing values only.		
	2) "C LRSI" SSG freq' : 495.050MHz								
	3) "H LRSI" SSG freq' : 511.950MHz								
5. RSSI (High)	1) Set test mode Select "L HRSI" in tuning mode. SSG freq' : 478.050MHz SSG output : -70dBm SSG MOD : 1.5kHz						Writing values only.		
	2) "C HRSI" SSG freq' : 495.050MHz								
	3) "H HRSI" SSG freq' : 511.950MHz								
6. Squelch check	1) Set test mode CH : CH1 - Sig1 SSG freq' : 495.050MHz SSG output : 15dB SINAD level						Check	Squelch must be opened.	
	2) SSG output : OFF						Squelch must be closed.		

**ADJUSTMENT**

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
7. QT check	1) Set test mode CH : CH1 - Sig5 SSG freq' : 495.050MHz SSG MOD INT : 1kHz EXT : 151.4Hz SSG system MOD DEV : ±1.85kHz SSG output : 12dB SINAD level	SSG AF VTVM Distortion meter Oscilloscope AG	Rear panel	ANT ACC (EXT.SP)			Check	Squelch must be opened.
	2) CH : CH1 - Sig4 CH1 - Sig6 CH1 - Sig7							Squelch must be closed.

**Transmitter Section**

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
1. Frequency	1) Set test mode Select "FREQ" in tuning mode. PTT : ON	Power meter F. counter	Rear panel	ANT			Check	455.100MHz±100Hz
2. Power output	1) Maximum power Set test mode Select "HPOW" in tuning mode. "H HPOW 256" PTT : ON			TX-RX (A/2)	VR1	28.0W		±0.5W
3. High power	1) Set test mode Select "HPOW" in tuning mode. "L HPOW" PTT : ON					25.0W		±1.0W
	2) "L2 HPOW" PTT : ON							
	3) "C HPOW" PTT : ON							
	4) "H2 HPOW" PTT : ON							
	5) "H HPOW" PTT : ON							
4. Low power	1) Set test mode Select "LPOW" in tuning mode. "L LPOW" PTT : ON	Power meter				5.0W		±0.5W
	2) "L2 LPOW" PTT : ON							
	3) "C LPOW" PTT : ON							
	4) "H2 LPOW" PTT : ON							
	5) "H LPOW" PTT : ON							

# TK-885

## ADJUSTMENT

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
5. Power check	1) Set test mode CH : CH1 - Sig1 CH2 - Sig1 CH3 - Sig1 PTT : ON	Power meter Ammeter		ANT DC IN			Check	25W±1W, 8A or less
6. Modulation balance	1) Set test mode MIC input : OFF Select "BAL" in tuning mode. "L BAL" Deviation meter filter LPF : 15kHz HPF : OFF De-emphasis : OFF	Power meter Deviation meter Oscilloscope AF VTVM AG	Rear panel Front panel	ANT MIC			Make the de-modulation waveform near.	
	2) "C BAL" PTT : ON							
	3) "H BAL" PTT : ON							
7. Maximum deviation	1) Set test mode Connect AG to the MIC terminal. Select "MAX" in tuning mode. "L MAX" AG : 1kHz/40mV Deviation meter filter LPF : 15kHz HPF : OFF De-emphasis : OFF PTT : ON						1.85kHz (According to the larger +, -)	+0Hz, -50Hz
	2) "C MAX" PTT : ON							
	3) "H MAX" PTT : ON							
8. MIC sensitivity check	1) Set test mode CH : CH1 - Sig1 AG : 1kHz/4mV PTT : ON						Check	±1.5kHz±0.05kHz
9. QT deviation	1) Set test mode Select "QT" in tuning mode. "L QT" Deviation meter filter LPF : 3kHz HPF : OFF PTT : ON						0.35kHz	±50Hz
	2) "C QT" PTT : ON							
	3) "H QT" PTT : ON							

**ADJUSTMENT**

Item	Condition	Measurement			Adjustment			Specifications/Remarks

## TERMINAL FUNCTION

**CN7 (TX-RX Unit A/2) ↔ CN502 (TX-RX Unit B/2) CN101 (VCO) ↔ TX-RX Unit (A/2)**

Pin No.	Name	Function
1	W/N	No function.
2	T/R	TX/RX switch. H : Receive
3	MO	Modulation signal.
4	TO	Low speed data signal.
5	BEEP	Beep.
6	8R	NC (8V)
7	PSW	Power switch.
8	DEO	Receive signal to control unit.
9	MM	MIC mute. H : MIC mute
10	AFO	Receive signal from control unit.
11	ME	MIC ground.
12	MI	External MIC.
13	AHK	Hook signal. H : Off hook
14	IGN	Ignition signal.
15	SB	13.6V.
16	SB	13.6V.
17	8C	8V.
18	KEY	TX signal.
19	CK	Shift register clock.
20	DT	PLL/Shift register/DA converter data.
21	RSSI	RSSI signal.
22	LD	PLL unlock detection.
23	ES	Shift register enable.
24	EP	PLL enable signal.
25	EN	DA converter enable signal.
26	APTT	No function.
27	CP	PLL clock.
28	DTC	No function.
29	TXD	Serial data
30	RXD	Serial data.
31	OE	Serial data.
32	FSW	Foot switch signal.
33	E	Ground.

Pin No.	Name	Function
1	ST	Switched transmit input. H : Transmit
2	HT	RF output.
3	E	Ground.
4	9CL	9V input.
5	8CL	8V input.
6	MD	Modulation input.
7	CV	Control voltage input.

**CN501 (TX-RX Unit B/2)**

Pin No.	Name	Function
1	E	Ground.
2	5C	Logic power (5V).
3	CS	Chip selector signal. L : Option
4	CK	Serial clock signal.
5	SID	Serial data input.
6	(NC)	Unused terminal.
7	(NC)	Unused terminal.
8	LED(A)	LED anode terminal.
9	LED(K)	LED cathode terminal.
10	NC	Unused terminal.

**J501 (TX-RX Unit B/2)**

Pin No.	Name	Function
1	BLC	MIC key backlight control.
2	PSB	13.6V.
3	E	Ground.
4	PTT/TXD	PTT.
5	ME	MIC ground.
6	MIC	MIC signal input.
7	HOOK/RXD	Hook detection
8	CM	MIC data detection.

# SPECIFICATIONS

## GENERAL

Frequency Range .....	478 to 512MHz
Number of Channels .....	Trunking mode : Maximum 1023 channels Conventional mode : Maximum 32 channels
Channel Spacing .....	12.5kHz
Input Voltage .....	13.6V negative ground
Current Drain .....	0.4A on standby 1.0A on receive 8A on transmit
Temperature Range .....	-30°C to +60°C (-22°F to +140°F)
Frequency Stability .....	±2.5ppm from -30°C to +60°C
Dimensions & Weight .....	140 (5.51) W x 40 (1.58) H x 145 (5.73) D mm (inch), 0.94kg (2.07 lbs)

## RECEIVER (Measurements made par EIA standard EIA/TIA 603)

RF Input Impedance .....	50Ω
Sensitivity .....	0.35µV
Adjacent Channel Selectivity .....	67dB
Intermodulation Rejection .....	65dB
Spurious and Image Rejection .....	80dB
Audio Power Output .....	4W at 4Ω less than 10% distortion
Channel Frequency Spread .....	34MHz

## TRANSMITTER (Measurements made par EIA standard EIA/TIA 603)

RF Power Output .....	25W
Spurious and Harmonics .....	70dB
Modulation Limiting .....	±2.5kHz at 12.5kHz
FM Noise .....	40dB
Microphone Impedance .....	600Ω
Audio Distortion .....	Less than 3% at 1000Hz
Channel Frequency Spread .....	34MHz

## KENWOOD CORPORATION

14-6, Dogenzaka 1-chome, Shibuya-ku, Tokyo 150-8501, Japan

### KENWOOD SERVICE CORPORATION

P.O. BOX 22745, 2201 East Dominguez Street, Long Beach, CA 90801-5745, U.S.A.
