

MFJ-226 Windows Firmware Update Program

This program is a Windows based program that uses a Graphical User Interface instead of the older DOS based program originally issued.

This program does not have the COM port limitations that the older program had.

NOTE THIS PROGRAM WILL NOT RUN ON WINDOWS XP OR EARLIER. The program uses Framework.NET4.5 which will not run on Windows XP and there are no plans of making it backward compatible.

Installing the program

1. Extract the zip file to a convenient location that you can find easily.
2. Execute SETUP.EXE that is in the extracted folder.

The program will install and will show up in the ALL PROGRAMS list in the folder TIMES TECHNOLOGY COMPANY as UPDATE TOOL.

Updating the firmware

1. Download the latest update and save in a convenient location. If it is in a zip file then extract it to a convenient location.
2. Connect the USB cable to the computer and the MFJ-226
3. Put the MFJ-226 into Firmware Update mode by holding the function key (lower left with the gear icon) in and press the power button. It will display Firmware Update.
4. Launch the Update Tool. It should list the device and the port it is connected to.
5. Open the file by clicking on the button then browsing to the new firmware update file which ends in .ENC
6. Click on the update button and the update should start.
7. Once finished turn off the MFJ-226 and click on the quit button to close the program.
